

UNTHA live at IFAT 2022

More live demonstrations than ever before, more hands-on experience

Together with our long-standing customer Breitsamer Entsorgung, UNTHA is creating an additional, particularly attractive opportunity to see several machines in live operation alongside our presentation at the IFAT 2022 stand. From Tuesday, 31.5, to Thursday, 2.6.2022, live demos will take place daily at 4 p.m., during which various materials will be tested in practice.

The performance and flexibility of a shredding machine is best experienced in live operation. This is exactly what UNTHA shredding technology is offering at IFAT 2022 - both at the VDMA Practice Days on the topic of biomass and specifically for customers and interested parties.

From waste wood to white goods

The shredding specialist from Austria will be showing its entire range of mobile shredding machines at the Breitsamer Entsorgung site. For example, you can see the XR3000RC mobil-e, the XR3000C mobil-e and the new ZR2400W mobil-e process various materials such as waste wood A2-A3, tyres, window profiles, mechanical and biological scrap/nail scrap, roll material, mixed construction waste, pulper ropes and white goods. UNTHA team experts will accompany the demonstrations, be available for questions and show the machines down to the very last details.

Details and registration

For the live demos on Tuesday, Wednesday and Thursday during IFAT 2022, a free shuttle service will be available to take visitors directly from the exhibition centre to the demo area and back. Visitors must register for demonstrations as places are limited. All details can be found at www.untha.com/en/fairs/ifat2022#live.

Raffle for a free demonstration

As a special treat, all live demo participants will be included in a raffle for a free demonstration of an UNTHA machine. A test run in your own company will give you the chance to put UNTHA's solutions through their paces - with your own material. Numerous customers have already used this option in the past years - and most of them have also purchased the relevant machine after the convincing test.

What else UNTHA will be showing at IFAT 2022

UNTHA will be exhibiting in Hall B6, Stand 127/226 with the new ZR Class, the tried and tested XR Class, the proven RS four-shaft technology, the intelligent UNTHA GENIUS assistance system and the complete range of services offered by the UNTHA Service Competence Center. At the VDMA Practice Days, the XR shredder will be on show as a mobile variant.

Further press releases and all continuously updated information on UNTHA's presence at IFAT can be found at www.untha.com/en/fairs/ifat2022.

UNTHA shredding technology

50 years of shredding technology reliability

UNTHA shredding technology develops and produces customised and reliable shredding systems. The spectrum of applications ranges from the recovery of valuable materials for recycling to the utilisation of residual and waste wood to the processing of waste into secondary fuels. In this way, the company makes an important contribution to the conservation of resources and the sustainable recycling and reduction of waste.

UNTHA was founded in 1970 and has its headquarters in Kuchl near Salzburg, Austria. The company employs around 300 qualified staff and is represented by a global sales network in more than 40 countries on all continents. This makes UNTHA one of the most important manufacturers in a growing and future-oriented industry.
