Bottom is the well bottom shape (Flat or U/round). **Min. well depth** is the minimum well depth measured across the plate. **Sensing lid SKU** is the lid with the longest probe (094A = 9.4 mm, 101A = 10.1 mm, 108A = 10.8 mm) no longer than the minimum well depth. **Notch location** lists the primary corner notch, then the second notch where present. Only plates with a "Pass" fit result are listed. Verification data as of October 2026.

2D vs 3D cultures

The sensing lid SKUs above are for 2D (monolayer) work. For 3D cultures such as spheroids, organoids or scaffolds, subtract the maximum height of the 3D structure from the minimum well depth, then choose the sensing lid with the longest probe that still fits within the remaining depth.

Example: a well with a minimum depth of 11.24 mm and a 0.8 mm spheroid leaves 10.44 mm, so use the **101A** (10.1 mm) sensing lid instead of the 108A.

Ordering the right sensing lid

The SKU in the table is the probe length. Add the prefix for your Resipher model: **NS96-** for the 96X Resipher, or **NS32-** for the 32X Resipher.

Example: a plate listed as 108A uses **NS96-108A** on a 96X Resipher or **NS32-108A** on a 32X Resipher.

This is not an exhaustive list of compatible plates. If you are working with a 96-well plate that is not listed here, or with a different culture format, please contact support@lucidsci.com and let the team know which plate and culture type you are using. We will help you select the right sensing lid.
