

URBN macOS VPN

Our new Mac VPN has been pushed to your device. There are steps you need to take for a successful installation.

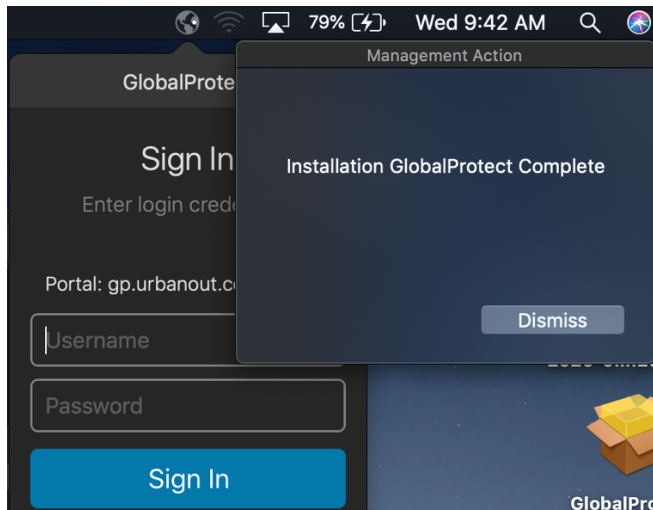

The next time you log into your computer the below message will be displayed.

You will immediately be requested to authorize the application. Please enter your password and click **"Always Allow"**

After the installation is successful a new icon will appear in your taskbar. Sign into the application with your username and password.

After you have successfully signed in you will now be connected to the corporate network. You will not have to sign into the application again until you reset your password.
