### Languages

**Spanish** Native

**English** Proficient

### Skills

HTML5

SASS

JavaScript/ES6

Git

Vue/NuxtJS

### Projects

#### Security Alerts Web-app

April 2018 Intern Project

This web-app created using Laravel PHP framework, was created to automatize the creation and delivery of the University of Puerto Rico at Ponce security alerts to the community.

#### Frontpoint Security Informational

August 2018 Work

Lead the front-end development and worked closely with the backend developer. Deployed using Sitecore CMS.

#### TGI Fridays Landing Page

November 2018 Work

Collaborated in the homepage's development, backend built in Adobe's AEM. Also collaborated in some features of the mobile rewards and auth experience built using SAP's Gigya.

#### Celgene Informational

August 2018 Work

Collection of multiple pharma sites that included work for two of the most important drugs under the Celgene umbrella, REVLIMID and POMALYST, targeted towards both healthcare providers and patients. Leveraged a component approach in order to be reused and shared in between the two audiences and across all brands.

#### Inrebic Informational

February 2020 Work

Pharma site for BMS client targeted towards patients. Lead a team of other 2 front-end developers. Deployed as a custom theme for WordPress CMS.

#### Sismos PR Web-app

March 2020 Personal

Progressive web app dashboard created to visualize and track earthquake activity in the Puerto Rico area. Built and deployed using Nuxt and Netlify.

#### Verizon Landing Pages

June 2020 Work

Responsible for the technical feasibility and development of all Verizon landing pages across all lines of businesses. Built and deployed using Adobe's marketing automation system, Marketo.

#### Vans Web-app

August 2020 Work

Collaborated in the development of the Vans Custom Culture annual contest built on top of Vue deployed to many different markets across the globe.
