

# Kiwok applies for market entry support in Singapore

Kiwok has applied for the CHISEL Healthcare InnoMatch 2026 as first step to enter the Singapore market for health innovations.

## **About CHISEL Healthcare InnoMatch**

Organised by Centre for Healthcare Innovation CHI in Singapore and supported by Temasek Foundation and Ministry of Health, CHISEL is a cross-cluster platform that convenes the Singapore public healthcare system to accelerate the adoption of market solutions from start-ups and SMEs. CHISEL provides an end-to-end process that matches market solutions to public healthcare needs and provides centralized funding and standardized evaluation to catalyse adoption.

Since CHISEL Start-up and Enterprise Link (CHISEL)'s inception in 2021, CHISEL had proudly welcomed almost 1,500 participants from 88 countries worldwide. Fully funded by the Ministry of Health and Temasek Foundation for the upcoming run (S\$3M for test-bed projects), start-ups and SMEs can look forward to receiving between S\$300,000 to S\$500,000 each for solution test-bedding with one of the three Singapore healthcare clusters – NHG Health, NUHS and SingHealth.

This year's Theme will be on Enhancing Health through an AI and Tech-Enabled Workforce. By leveraging AI and tech-empowering solutions to transform the healthcare workforce, there is a potential to improve efficiency, reduce operational costs, and elevate care quality. By integrating such solutions, we can catalyse change at every level—individual, institutional, and systemic—creating a future where healthcare delivery is smarter, more sustainable, and deeply patient-centric. Start-ups and SMEs with innovative solutions that can empower healthcare professionals, streamline operations, cut costs, and improve patient care quality are invited to apply and stand a chance to win the opportunity to test-bed with one of the three Singapore Healthcare Clusters and receive up to S\$500,000 for funding!

Stockholm April 17 2026

**About Kiwok Nordic AB (publ)**

Kiwok is a Swedish MedTech company founded in 2003. Together with academia, we develop the next generation of solutions for trend monitoring of the patient's vital health parameters. BodyKom, was according to Gartner, one of the first mobile-connected health solution. It is a global care service for continuous remote monitoring of patients' health development for a longer period of time. BodyKom leads to earlier detection and diagnosis and ensures follow-up and recovery. Kiwok's solutions provide sustainable care and a person-centred care process.
