Today, at EUROCONTROL Headquarters in Brussels, took place the meeting of the Network Directors of Operations (NDOP), bringing together operational directors from across the European air traffic management network. The event was chaired by Adrian Florea, Director of Operations at ROMATSA.
The discussions focused on key priorities for the future of European aviation:
strategic planning for the 2026–2030 period;
preparation for the transition and implementation of major projects for Winter 2025/2026;
lessons learned from Summer 2025 and their impact on network performance;
and strategic actions to ensure sufficient air traffic controller resources across Europe.

During the session on strategic projects, ROMATSA, represented by Andreea Strat, presented the progress on implementing FF-ICE (Flight and Flow Information for a Collaborative Environment) – a digital system enabling real-time flight data exchange between operators and air traffic controllers.
This enhances information accuracy, reduces outdated data, and strengthens operational coordination.

ROMATSA is a European pioneer in FF-ICE implementation, a project co-funded by the European Union through CINEA - European Climate, Infrastructure and Environment Executive Agency under the Connecting Europe Facility (CEF), and coordinated by SESAR Deployment Manager, supporting the digital transformation of air traffic management across Europe.
