Operational Service Modules

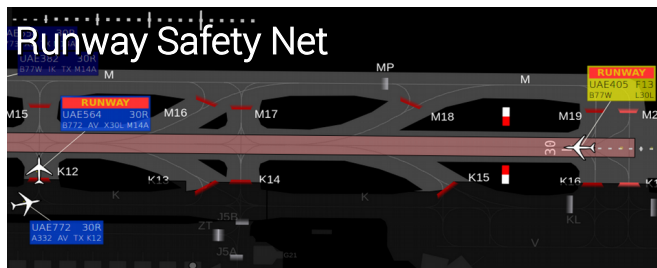

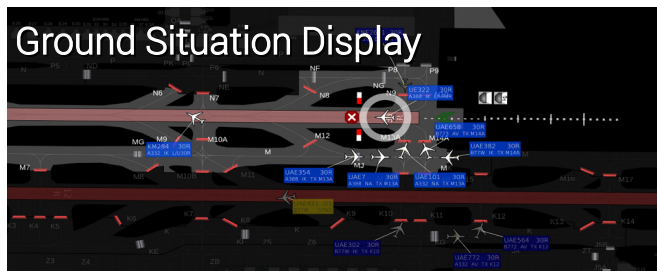

Ground Situation

AGL CMS

Runway Safety Net

The **Core Service** module provides an integrated set of basic functions to cover the essential needs of airports in VMC and LVC.

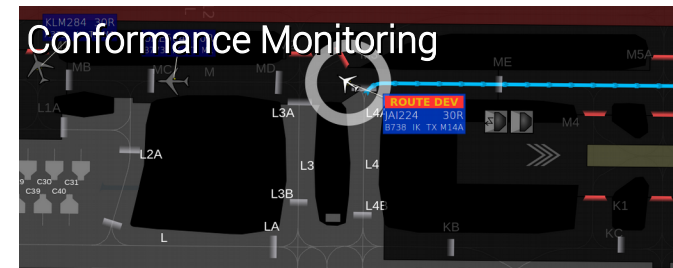

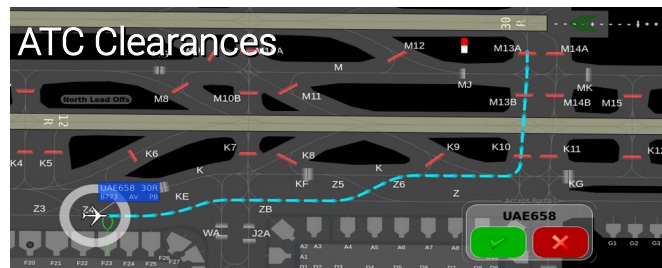

CWP Roles

Coordination

Clearances

Conformance.

The **Digital Operations** module provides a full range of functions for CWP role management, flight data management, safe movement control and silent coordination.

The **Dynamic Guidance** module provides navigation support to pilots and drivers to prevent conformance failures and to increase taxi efficiency.

Block Control

Floating Spacing

Lateral Separation

The **Auto Control** module automatically establishes a safe spacing and separation in LVC while maintaining throughput on the taxiways and reducing controller workload.
