The Money20/20 Europe 2022 Agenda

Welcome to the Money20/20 Europe agenda!

This year the content agenda spans a whopping seven stages, where our team has pulled out all the stops to offer a diverse selection of 170 sessions across three days. And if that wasn't enough, we have two brand new experience stages for you to feast your eyes on.

From our Sex and Drugs and Rock and Roll stage (the only place to get a Bloody Mary at 10am in the morning) to the Exchange, a rollercoaster for the senses. But what do all of our stages have in common? Diverse topics, great speakers and a little bit of the Money20/20 magic added in for good measure.

Whether you're here to dive in or just soak up the highlights, we've got you covered.

It's 2022, events are back and Money20/20 continues to lead the pack in bringing you the contacts, experiences and content you need to know.

Welcome aboard.

AGENDA THEMES

You are here to play, not just watch.

This year's show themes and agenda are like no other. Check out below the themes of our playground that gave the tools our attendees need to succeed on every front that matters - understanding and winning over customers, winning over the competition, and building the most progressive technological and regulatory environment in the world. These themes fuelled a powerful agenda.

Back end is out, front end is in.

Core banking and every other non-differentiating part of a business is a commodity. The battleground has moved from the tech stack to the user experience. Among thousands of businesses built on the same technological layer, the real competition happens where our products interact with our customers. What does a best in class customer journey look like? The core hallmark of your product today has to be fluidity and adaptability. Cultural revolutions are your source of inspiration for building enduring products that keep delighting.

Topics explored in this theme:

Channels of interaction, Consumer trends, Customer behaviour, Customer engagement, Customer journeys, Customer needs, Mission-driven business, sustainability, New product categories and development, Personalisation, Pro-customer approach, Product ideation, UX/UI

Champions are out, interoperability is in.

There is an abundance of solutions springing up across verticals. As the playing field is leveled by a standardizing technological layer across Europe, the meaning of competition changes. We have never had such variety and volume of options and such low barriers for entry. Abundance and competitiveness is to the benefit of the customer. But it doesn't have to be a zero-sum game for companies. The growth and opportunities will come from dismantling walled gardens we are used to building and embracing the principle of interoperability by design. When every piece of infrastructure is a commodity, orchestration takes the center stage. The payments engine will become the most critical piece of infrastructure for retailers, e-commerce brands, marketplaces, and payments organisations.

Topics explored in this theme:

Alternative payments methods, Consolidation, M&A, Cross-industry collaboration, Ecosystem development, Geopolitics, Localisation, Partnerships, Software strategy, Value chain

Acquisition is out, distribution is in:

Financial services are a native component and a commodity in every environment. The path to scale today is in alignment with the largest end-user platforms - banks, e-commerce, social media, insurance, and telecommunications companies. We need to focus on contexts where the financial component will significantly improve the experience - whether it's a non-financial environment or the best of breed niche solution in a wider suite of financial products. Blowing your marketing budget on buying customers is futile. Using powerful end-user platforms as your distribution channels is the way of the future.

Topics explored in this theme:

Business models, Contextual finance, Embedded finance, Engaging customers where they are, Financial inclusion and access, Governance, Growth strategy, Implementation strategy, Integrations, Monetisation strategy, Network effects

Proprietary is out, standardisation is in:

Proprietary technology is not a moat, it's a debt. It's time to adopt open and shared technical standards to enable fair competition and radical transparency that will prioritise best interests of individuals over interests of entities. The digital euro is the first step on the road to standardization of payments. We are going back to basics - bank-based payments will become the cornerstone of online commerce. The payments landscape in Europe will be consolidated, but we don't have to kill the local darlings for the benefit of the region. A new pan-European money infrastructure will be a profound achievement, and it will start with interoperability. Achieving interoperability on a technological level will translate into the rise of the orchestration layer in payments and financial software at large. Unification and standardization of infrastructure will start in Europe, with the money infrastructure, and will inevitably spread across industries. Open source and infrastructure neutrality are the future.

Topics explored in this theme:

Data strategy, Digital money (CBDC, cryptocurrencies, forms of programmable money), Open banking, Open finance, PSD2, PSD3, Regulation, Technological standards (ISO20022)

Ownership is out, permission is in:

Ownership is changing hands from entities to individuals. We have to build pan-European standards for the flow of information, currency design, and data ownership that will enable instant verification and exchange between markets, entities, and wallets. The use of information becomes permission-based and an individual is the one giving the permission. Payments and identity will be one and the same. The future of the industry is in the grey area between DeFi and CeFi, virtual and real, where the best of both worlds merge.

Topics explored in this theme:

Decentralisation, DLT, Emerging technologies (NFT, tokenization), Regulation of advanced technologies (AI, quantum computing), Trust (data, identity, privacy, security, Web 3.0)

STAGES

Big Picture Stage

This is our 'biggy' where over 800 guests will be treated to a big-boutique cinema experience starring you. Inspired by classic art deco picture houses but delivered as only Money20/20 can, The Big Picture Stage is our blockbuster platform for the biggest ideas in Fintech.

When you're not up there in the lights, be sure to grab gourmet popcorn and ice cream treats.

The M Pulse Stage

The beating heart of Money20/20, located in its own dedicated arena in the core of our largest hall. The M Pulse Stage is purpose-built to position you at the centre of the show and is designed with two-level seating on either side of the runway to create an envelope of energy onto the stage.

Plantarium Stage

An intimate but open stage with wide site lines from across the show floor, 'Plantarium' is the place where your ideas are planted and nourished. This low glass stage with its living wall backdrop, grassed floor, and hanging plants, provides a calming, eye-catching, and inspiring environment in which to seed your ideas.

Evolution Stage

Arguably our most unique stage on the show floor, The Evolution Stage is located at the intersection of Hall 1 and Hall 7 - or between light and dark - with the two areas providing an exciting, transitional experience for guests as they move through the space. The stage provides the main attraction flanked by a beautiful, illuminated floor-to-ceiling walkway sculpture and integrated bar.

Sex, Drugs, and Rock and Roll Club

Think the Late Late Show with James Corden mixed with your favourite stand-up night. This club is like no club you've seen before. Themed around the bar itself (motorbike hanging from the ceiling naturally), you can shoot some pool or get a temporary tattoo while listening to the bands on stage. But for two-to-three sessions a day, the stage will host the most interesting discussions you've ever heard at a club scene.

With seating for 150 people either on the floor or at the bar. This club offers an opportunity for interesting firesides, in-depth discussions, & more.

The Exchange

Money20/20's worst-kept secret. Billed as an experience stage, you'll have as much fun finding it as you will in the room. Make space in your diary for this escape-room-meets-best-talk-you've-ever-heard.

Once you've found the Exchange, phones will be put away in sealable pouches which ensure all eyes are on the speakers.

From hot news to founder's stories and debating the big issues, the Exchange is the coolest stage to be at, we know you'll be rushing to grab a coveted slot in this 150-seater experience.

RiseUp

Empowering inclusivity in leadership. Where all women and men allies get together and as a closed doors event, there will be plenty of content to be shared, memorized and then we want all attendees to put in practice what they've learnt from it.

The impact of the program is far reaching providing aspiring women leaders with a unique opportunity to strategically create an effective roadmap for their desired career path

Generic sessions that will help you to identify your mentor/sponsor for your next career move, to private roundtables, focused on how to network post pandemic, or how to lose fear when coming from corporate and joining a startup or vice versa, and much more.
