

Automotive supply chains that never miss a beat

Schoeller Allibert

Stackable strength for seamless logistics

VDA KLT: The modular, durable standard for stackable precision packaging in automotive logistics. »

Modular & compact distribution solution

Create rock-solid handling units that perfectly interlock. All models stack seamlessly with one another, while 400x300mm containers fit 2-up on 600x400mm models. Cross-stacking forms highly stable palletised units that move confidently through your supply chain.

Care of your products

Safeguard your valuable components with smooth vertical sides that maximise internal volume and protect contents from damage. Optional lids shield your parts from dust and contaminants.

Ergonomic

Handle with confidence thanks to recessed hand-holds that ensure comfortable and secure manual movement.

Strong

Built to perform under pressure with stacking loads up to 600kg on the bottom container. Choose single wall models for loads up to 20kg (R and RL-KLT ranges).

Compatible with automated systems

Integrate seamlessly with your automated filling, weighing, scanning and handling technology. R-KLT containers feature reinforced bases for smooth conveyor operations and rigid support for automated storage and retrieval equipment.

RL-KLT models remain light yet compatible with most conveyors, featuring a smooth base with drainage holes to prevent water trapping after washing or outdoor storage.

Identification & tracking

Keep your supply chain organised with integrated label holders for content and destination identification. Customise with your logo and contact details for enhanced asset control.

Sustainable

Cut costs and carbon with containers that last. Recyclable after their long working life, these environmentally friendly units save money by replacing disposable packaging and reducing waste.
