

Raleigh-Durham Airport Authority Safety Policy Statement

In delivering a world-class airport experience, the Raleigh-Durham Airport Authority (Authority) commits to implementing an integrated and effective Safety Management System (SMS) as established in 14 CFR Part 139 Subpart E.

The Authority acknowledges our employees, stakeholders, and customers are exposed to potential airport hazards. Recognizing this circumstance, the Authority is committed to implementing an SMS to ensure all activities uphold the highest level of safety performance and meet or exceed regulatory requirements.

To reduce and manage hazards through the SMS, the Authority commits to:

- Clearly defined goals for management to implement safety strategies.
- Ensure objectives and targets are realistic and achievable.
- The pursuit of an accident-free workplace.
- A culture of non-punitive hazard reporting for all airport staff and stakeholders.
- Practice proactive techniques to identify and resolve hazards.
- Regular reviews and evaluations of all safety practices, policies, and procedures.
- Continuous monitoring of industry standards to ensure the implementation of best management practices at Raleigh-Durham International Airport.
- A safety committee continuously monitoring and reporting safety performance.
- Develop and promote safety training and awareness programs.
- Provide resources necessary to support safety initiatives and promote a culture of safety.

Though management is responsible for developing and organizing the SMS, its success will depend on the involvement of staff and stakeholders at all levels of the organization.

Michael Landguth, A.A.E
President/CEO
