

## Bayer Pollen Beetle Predictor

The Bayer Pollen Beetle Predictor forecasts the start, peaks and progress of pollen beetle migration into winter OSR. The 3 maps tell you when it's time – or not – to go out to your crops to assess pollen beetle populations (average number of beetles per plant).

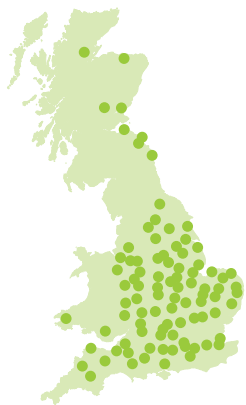

### Map 1 – Migration start

- Migration started
- Migration start within the next few days
- Migration not started

Watch map 2 for new migration and map 3 for extent of migration

### Map 2 – New migration

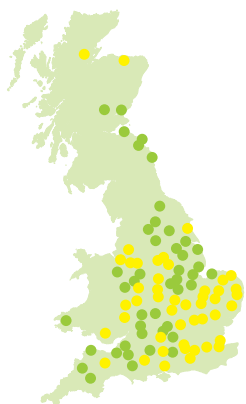

- Optimum migration conditions / intensive migration possible
- Good migration conditions
- Conditions not suitable / moderate migration conditions

Monitor fields

**Apply insecticide?**  
Only if average number of beetles per plant exceed threshold

### Map 3 – Percent migration

- Migration mostly complete
- Partial migration (beetle population expected to increase)
- No migration yet

**Risk period ended**  
Migration finished and / or crop past damage susceptible stage
