

FluidLogic Wave™

The new wave of hydration™

The FluidLogic WAVE is a complete hydration system that can securely mount in a wide variety of applications, keeping you cool and hydrated throughout your entire adventure. Whether you're on the go solo or trekking out with the whole family, WAVE provides easy access to ice-cold water wherever your next journey takes you.

BENEFITS

Perfectly Chilled Water

Easy Hydration

Quick-Release Convenience

APPLICATIONS

Vehicles

Bikes

UTVs

ATVs

Golf Carts

Wheelchairs

FLUIDLOGIC FEATURES

Secure Mount — The WAVE's quick-release mount easily secures the durably constructed bottle to any size roll bar, allowing for easy connection and disconnection and convenient filling.

Varying Capacity — Kitchen-grade stainless-steel bottles come in varying capacity options (32 and 64 ounces) to ensure that you have plentiful refreshment to last through short or long trips.

8-Hour Insulation — Our double-wall, vacuum-insulated bottles protect the temperature of liquids, keeping drinks perfectly chilled for up to eight (8) hours to unlock easy, all-day hydration.

One-Handed Operation — The unique magnetic dock allows users to quickly and safely stay hydrated while keeping their eyes on the road ahead or when parked at their favorite spot in the great outdoors.

Wide-Mouth Bottle Opening — WAVE's wide-mouth bottle opening makes it simple for anyone to add more liquid or even ice to be sure the drink remains as cold as possible for as long as possible.

Sustainability — The FluidLogic WAVE reduces plastic litter because users no longer require several water bottles when out and about, enjoying all of the wonderful things Mother Nature has to offer.

ELEMENTS OF THE FLUIDLOGIC SYSTEM

1. MAGNETIC HOSE DOCK

2. DRIP-RESISTANT SILICON BITE VALVE

3. DAIRY-GRADE, INSULATED DRAW TUBE

4. QUICK-RELEASE ROLL-BAR MOUNT

5. STRAPS FOR SECURING DRAW TUBE

6. 32OZ OR 64OZ FLUID-CONTAINMENT BOTTLE

HOW TO INSTALL FLUIDLOGIC WAVE:

1. Installation only requires a Phillips head or flathead screwdriver.
2. Attach the secure bottle mount in position, threading two hose clamps through the mount and around the roll bar or other attachment position. Fasten the mount in place with screws and the screwdriver.
3. After the bottle is mounted, mount the magnetic dock to the roll bar or other attachment position by putting the strap through the opening and pulling the strap tight.
4. Attach the fluid line to the bottle by connecting the quick-connect end of the fluid line to the bottle's lid by pushing it in until it clicks.
5. Route the fluid line through to the magnetic dock you've fastened to the roll bar or other attachment position, and it magnetically snaps in place.
6. The final step is to find a strap to tether the fluid line securely to the roll bar or other attachment position.
7. The bite valve can be adjusted on the roll bar or other attachment position — slid forward, backward or rotated inward to determine the optimal length for comfortable hydration.

COST

The FluidLogic Wave costs between **\$169.95** and **\$189.95**.
