

The FluidLogic Active Hydration™ System

Hydration for the human race™

FluidLogic is the world's most advanced active fluid delivery system. Born in the rugged and arid tracks of Baja racing, the FluidLogic system with Active Hydration delivers water in predetermined dosages at regular intervals to achieve Hydration Equilibrium™. Hydration Equilibrium empowers users to maintain physical and mental acuity and reduces recovery time.

APPLICATIONS

Motor Sports

Adventure Bikes

First Responders

Health Care

Applications

COST

The FluidLogic System costs between
\$1,099.95 and **\$1,368.95**.

FLUIDLOGIC FEATURES

Active Hydration™ — Research reveals that adequate hydration positively impacts cognitive function, blood pressure and other health indicators, revealing a performance improvement of up to 10%.

Easy Installation — Leveraging unique quick-release mounts, the FluidLogic system quickly and simply installs on a wide variety of motor vehicles, including race cars, motorcycles and much more.

Quick Connection — The system's proprietary MagLock connectors utilize rare-earth magnets and check valves to assure the fastest, safest and most-reliable drip-free connection possible.

Durable, Compact & Lightweight — As durable as it is lightweight and compact, the 2.2-pound FluidLogic system is built to last — from the race track to the desert and everywhere in between.

Flexible Fluid Delivery — Delivering precise doses of fluid, the unique active hydration system can be fine-tuned to adjust the volume, pressure and reminder interval for hydration delivery.

ELEMENTS OF THE FLUIDLOGIC SYSTEM

1. THE POD

2. FLUSH 360™ HELMET CONNECTOR

3. MAGLOCK® CONNECTORS

4. AQUA COM®

5. QUICK-RELEASE MOUNTS

6. FLUID LINE

7. 32OZ OR 64OZ FLUID-CONTAINMENT BOTTLE

8. FLUIDLOGIC SMARTPHONE APP

HOW FLUIDLOGIC WORKS TO ACHIEVE ACTIVE HYDRATION:

- Fluid is contained in a 32- or 64-ounce stainless-steel, double-wall, vacuum-insulated fluid-containment bottle.
- The bottle mounts securely to a roll bar in the vehicle using a quick-release mount.
- The bottle then attaches to a quarter-inch, dairy-grade insulated fluid line to keep fluid as cold as possible in transit to the Pod.
- The Pod, also known as the heart of the FluidLogic system, houses the proprietary pump, motor and circuit board and mounts anywhere within a vehicle, in any orientation.
- With a maximum pressure of 35 PSI, the pump flawlessly delivers your customized hydration regimen.
- The brain of the system utilizes the latest Bluetooth specifications to sync with the app and deliver the right amount of fluid when it's needed.
- With high torque and rapid response times, the RSi motor propels fluid quickly and effortlessly toward the Aquacom.
- The air- and water-tight MagLock connection uses two concentric neodymium rare-earth magnets to couple fresh air and hydration supplies.
- The food-grade silicone Aquacom mouthpiece is designed to work efficiently across a couple of different sizes to ensure precise, drip-free fluid delivery.
- The microbutton easily mounts to steering wheels, handlebars or dash areas, and its integrated LED reminds users when to hydrate.
- The FluidLogic app features industry-leading performance and a range of adjustments to enable complete customization.
- When the user commands the system using the microbutton, fluid is output from the Pod through the fluid line to the Aquacom to the user's mouth.
