1. Introduction

This document presents the Pillar 3 disclosures of Wio Bank P.J.S.C ("the Bank" or "Wio Bank" as of 31st December 2024. The purpose of these disclosures is to allow market participants to assess key pieces of information on the firm's capital, risk exposures, and risk assessment process.

The Bank is regulated by the Central Bank of UAE and follows the Pillar 3 disclosure requirements as stated under the CBUAE guidelines.

1.1 Regulatory Framework

The Bank measures its capital adequacy based on the Basel III regulations published by CBUAE. The framework is organized around the following three Pillars:

- Pillar 1: Minimum capital requirements for credit, market, and operational risk
- Pillar 2: Supervisory review process and ICAAP
- Pillar 3: Market discipline

1.2 Pillar 1 – Minimum Capital Requirement

The Bank is governed by CBUAE guidelines on regulatory capital requirements. Pillar 1 defines the total minimum capital requirements for Credit, Market, and Operational risk. The Bank currently uses standardized approach for assessment of Credit, Market and Operational Risk weighted assets (RWA). Under the standardized approach, regulatory prescribed risk weights and parameters are applied to calculate Pillar 1 capital requirements. During 2011, Basel Committee on Banking Supervision (BCBS) officially announced the final set of revised regulatory capital rules known as "Basel III", which are being phased in globally. Subsequent to Basel III consultation paper issued by CBUAE in 2016, the UAE Central Bank published the "Regulations re Capital Adequacy" (the "Basel III Regulations"), which were effective from 1 February 2017. The Basel III Regulations are supported by the accompanying standards entitled "Standards for Capital Adequacy of Banks in the UAE" which were updated by the UAE Central Bank in November 2020 by virtue of Notice No. CBUAE/BSD/N/2020/4980 (the "Accompanying Standards"). The Accompanying Standards elaborate on the supervisory expectations of the UAE Central Bank with respect to the relevant Basel III capital adequacy requirements as well as the timeline of the phased implementation of the regulations from June 2021 to June 2022.

CBUAE has introduced regulatory thresholds for Common Equity Tier 1, Tier 1, and overall regulatory Capital.

- 1. CET1 must be at least 7.0% of risk weighted assets (RWA).
- 2. Tier 1 Capital must be at least 8.5% of RWA.
- 3. Total Capital, calculated as the sum of Tier 1 Capital and Tier 2 Capital, must be at least 10.5% of RWA.

On top of this minimum capital requirement, CBUAE also requires additional buffers in the form of Capital Conservation Buffer (CCB) of 2.5%.

These requirements are summarized in the table below:

Capital Element	Requirement
Minimum Common Equity Tier 1 Ratio	7.0%
Minimum Tier 1 Capital Ratio	8.5%
Minimum Capital Adequacy Ratio	10.5%
Capital Conservation Buffer	2.5%

The capital ratios for the Bank as of 31 Dec 2024 are given below:

Common Equity Tier 1 Ratio	51.14%
Tier 1 Capital Ratio	51.14%
Capital Adequacy Ratio	51.47%

a) Credit Risk

The Bank uses the standardized approach to calculate RWA for credit risk. It uses risk weights to convert exposures into RWA as per the CBUAE guidelines for capital adequacy.

b) Market Risk

The Bank uses the standardized approach to calculate RWA for market risk as per the CBUAE guidelines. In calculating RWA for market risk, the bank distinguishes general and specific risk between holdings. The risk is quantified for positions for foreign exchange risk. The Bank has overall very limited exposure to Market Risk given the limited treasury and related activities.

c) Operational Risk

The Bank applies the Basic Indicator approach for calculating capital requirement for operational risk. The calculation is based on 15% of average Net Interest Income and Net Non-Interest Income for the past 3 years. The RWA for operational risk is calculated by dividing the capital requirement by CBUAE capital requirement multiplier.

1.3 Pillar 2 – ICAAP and Supervisory Review Process

In line with CBUAE guidelines, the Bank has completed the assessment under the Internal Capital Adequacy Assessment Process (ICAAP) as of 31st December 2024. The purpose of the internal assessment is to identify and incorporate risks not covered under Pillar I or found not being adequate. In accordance with the revised regulations issued by CBUAE, the ICAAP covers the following key components:

- Risk Governance
- Assessment of all types of material risks
- Stress Testing

In addition to the quantitative assessment of material risks, some risks were qualitatively assessed due to the nature of such risks.

1.4 Pillar 3 - Market Discipline

The Bank discloses to its external stakeholders detailed qualitative and quantitative information on its management practice and capital adequacy in line with the CBUAE Pillar 3 guidelines. The 3 Pillars together provide the necessary information to the market participants on the risk profile of the Bank. The disclosures are both qualitative and quantitative. This report should be read in conjunction with the risk disclosures in audited financial statements.

2. Overview of Risk Management and RWA

2.1 KM1: Key Metrics

		а	b	С	d	е
	(AED 000s)	Dec 24	Sep 24	Jun 24	Mar 24	Dec 23
	Available capital (amounts)

26	Advances to Stable Resources Ratio (%)	4.38%	4.41%	2.57%	2.03%	1.37%

2.2 OVA: Bank Risk Management Approach

Wio Bank PJSC is a digital banking platform jointly owned by Abu Dhabi Development Company (ADQ), Alpha Dhabi Holding, e&, and First Abu Dhabi Bank (FAB). The Bank is regulated by the Central Bank of the UAE (CBUAE). The registered address of the Bank is Etihad Airways Centre in Abu Dhabi, 5th floor, in UAE. Wio Bank PJSC is a fully digital bank that provides banking solutions to SMEs and retail customers. It provides simplified and fully digital business account opening, personalized options, and seamlessly integrated services that are built around each client's needs, helping them automate their administrative tasks and be in control of their spending.

2.2.1 Risk Governance

The Board holds ultimate responsibility for the Bank's risk management, setting strategy and parameters, overseeing compliance, and approving key appointments. It ensures transparency through public disclosures, provides resources, and assesses management performance. The following committees were created to help manage various risks the Bank faces:

i. Board Risk and Compliance Committee (BRCC):

The BRCC supports the Board in risk management and compliance oversight. It reviews frameworks and transactions, monitors risk reporting, and recommends actions to maintain alignment with risk appetite.

ii. Management Risk Committee (MRC):

The MRC is responsible for management of risks, adhering to the Board's strategy. It monitors the Bank's risk profile, reviews proposals, addresses emerging risks, and establishes sub-committees for specific risk areas.

^{*}Note: The sub-committees under MRC are set up on need basis

2.2.2 Risk Governance Framework

Risk Management Department:

This department supports the Bank in establishing robust risk management practices. It identifies and assesses risks, provides training, and ensures compliance with regulatory requirements.

Compliance:

The compliance function oversees regulatory adherence, educates on requirements, and monitors compliance matters. It implements policies, reports to senior management and the board on compliance risk management and assists with operational compliance.

Internal Audit:

Internal Audit provides independent assurance on internal controls and risk management practices. It conducts risk-based audits, reviews, supports regulatory compliance, and submits reports to the Board Audit Committee.

Business Function (Business Units and Support Units):

These units identify, assess, and mitigate risks, establishing procedures and ensuring compliance with policies. They facilitate risk reporting and operationalize risk limits while ensuring adherence to laws and regulations.

First Line of Defense	Second Line of Defense	Third Line of Defense
Business Units / Support Units	Control Functions	Internal Audit
 Business Function Marketing Function Operations Function Treasury, Finance HR, Admin, IT 	Risk FunctionCompliance Function	• Internal Audit Function
 Follow a systematic process for business operations Apply internal controls and other risk responses Actively manage risks and facilitate reporting of risk information and risk events by providing necessary input Proactively review and update risk profile 	 Development of policies, processes, and models Independent oversight of the risk management activities of the Business Units Compliance Framework to ensure the Bank's effective compliance with regulatory requirements and mitigation of compliance related risks 	 Provide assurance that risks are being managed to be within the Bank's risk appetite Review implementation of risk management policies, processes, and systems Report independently to Board Audit Committee

2.2.3 Risk Appetite:

Risk Appetite is the level of risk that the Bank is prepared to accept whilst pursuing its business strategy, recognizing a range of possible outcomes as business plans are implemented. Risk appetite provides a basis for ongoing dialogue between management and the Board with respect to the current and evolving risk profile, allowing strategic and financial decisions to be made on an informed basis.

Risk Assessment:

- The risk assessment is performed by both the business and supporting units (1st line of defense), and control functions (2nd line of defense).
- The risk assessment is carried out at all levels and covers all processes and risk types.
- When carrying out the risk assessment, the team considers potential risks covering financial and non-financial impacts, including but not limited to potential disruption of the bank's business operations, effect on profitability, liquidity, capital adequacy and regulatory compliance, ability of the bank to meet its obligations to its customers or other counterparties, and other impacts.
- Assessing the risk is typically focused on the likelihood of the risk happening and the potential damage caused by the risk.

- Assessment of risk can be both quantitative and qualitative.
- Once the risks have been assessed, they are then prioritized. Risk prioritization is the process of determining risk management priorities by comparing the level of risk against predetermined target risk levels and tolerance thresholds.

Technique	Examples
Qualitative	For qualitative assessment, the most used techniques are interviews, cross-functional workshops, surveys, benchmarking, and scenario analysis.
Quantitative	Quantitative techniques range from deterministic models, benchmarking, and scenario analysis.

2.2.4 Risk Limit Structure

The Bank sets limits for key areas of risk in a manner that assists different departments within the Bank, particularly risk-taking departments, or the business units understand the parameters and boundaries they are required to adhere to. The Risk limits established are compatible with the current business strategy and Risk Appetite statement after due consideration of the nature, complexity and scale of the business undertaken. The Limit structure established is communicated to all business units which will drive risk measurement, monitoring, and management actions across Bank. Utilization of limits is monitored and reported, and breaches escalated. Risk limits are reviewed periodically to incorporate any changes in the business strategy and market conditions.

2.2.5 Risk Culture

The Board and Senior Management team are responsible for establishing a strong risk culture within the Bank. The CRO and Risk team are responsible for ensuring Risk Culture is embedded throughout the Bank in its business conduct, including creating proper governance processes, providing sufficient resources and infrastructure, incentive structure reflecting risk behaviors, training, and awareness programmes to ensure Risk Culture is advocated to staff in all functions and at all levels. Governance functions work effectively with sufficient independence to carry out their duty. MRC/BRCC provide oversight on the building of Risk Culture and request for improvements as required.

2.2.6 Risk Response

The results of the risk assessment process serve as the primary input to risk responses whereby response options are examined (accept, avoid, mitigate or transfer), cost-benefit analyses performed, a response strategy formulated, and risk response plans developed. The appropriate risk response ensures that the risks are kept within the appetite.

There are four types of response:

- Mitigate the risk: Take actions to reduce risk exposures e.g. increased controls.
- Transfer the risk: Continue the activity and transfer risks to another party e.g. via insurance.
- Accept the risk: Set a Risk Appetite in line with business strategy and take the necessary actions to ensure risk is kept within acceptable limits.
- Avoid the risk: Stop the existing activity/do not start the proposed activity/change strategy.

Risks identified via the RCSA and KRI process consider at a minimum, the following controls:

- a. Organizational structure (delegation of authority limits, decision making policies/processes, separation of critical functions such as origination, payments, reconciliation, and accounting)
- b. Accounting and financial reporting policies and processes, reconciliation of accounts, control lists, information for management
- c. Checks and balances (or four eyes principle), segregation of duties, cross checking, dual control of assets, double signature
- d. Safeguarding of assets and investments, physical controls and computer access, measures for the prevention and early detection and reporting of misuse such as fraud, embezzlement, unauthorised trading, and computer intrusion

2.3 OV1: Overview of RWA

The bank has witnessed significant growth from last year in its lending activity as well investment book which has resulted in increase in the credit risk weighted assets. Additionally, the net open positions for FX related transactions have also sharply increased over the year leading to increase in the market risk weighted assets

		а	b	С

3.2 LI2: Main Sources of Differences Between Regulatory Exposure Amounts and Carrying Values in Financial Statements

Not applicable

3.3 LIA: Explanations of Differences Between Accounting and Regulatory Exposure Amounts

Credit risk exposures reported under Pillar III disclosures differ in respect of the following vis-à-vis financial statements:

• The financial statements are prepared based on the Accounting Standards requirement whereas the Pillar III disclosures are prepared on the basis of the Basel III requirements.

4. Valuation Adjustments

4.1 PV1: Prudent Valuation Adjustments

Not applicable.

5. Composition of Capital

5.1 CC1: Composition of Regulatory Capital

		а	b
	(AED 000s)	Amounts	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
	Common Equity Tier 1 capital: instruments and reserves		
1	Directly issued qualifying common share (and equivalent for non-joint stock companies) capital plus related stock surplus	2,300,000	Same as (h) from CC2 template
2	Statutory Reserves	39,746	
3	Other Reserves (e.g. General Reserves, Other Reserves)	33,368	
4	Retained earnings	(456,926)	
5	Accumulated other comprehensive income (and other reserves)	(36,661)	
6	Audited/Reviewed current year profits / (-) Current financial year loss	292,311	
7	Directly issued capital subject to phase-out from CET1 (only applicable to non-joint stock companies)	-	
8	Common share capital issued by third parties (amount allowed in group CET1)	-	
9	CBUAE Regulatory deductions: (e.g. Amount exceeding Large Exposure threshold)	33,368	
10	Common Equity Tier 1 capital before regulatory deductions	2,138,473	
	Common Equity Tier 1 capital regulatory adjustments		
7	Prudent valuation adjustments

of central bank reserves) Leverage ratio (excluding the impact of any applicable temporary exemption of central bank reserves) CBUAE minimum leverage ratio requirement 5.70% 13.70% 25a CBUAE minimum leverage ratio requirement 3% 3%	Lever	age ratio		
25a of central bank reserves) 26 CBUAE minimum leverage ratio requirement 3% 3%	25		5.70%	13.70%
	25a			
27 Applicable leverage buffers	26	CBUAE minimum leverage ratio requirement	3%	3%
	27	Applicable leverage buffers		

The decrease in the ratio is because over the year, the exposures have increased at a much higher rate as compared with the increase in Tier 1 capital due to primarily investment of customer deposits received invested in sovereign bonds and other investments in addition to the lending portfolio taking off in the year 2024.

8. Liquidity

8.1 LIQA: Liquidity Risk Management

Overview and Governance of liquidity risk management.

The Bank's exposures are exposed to the following types of Liquidity risks:

- a) Mismatch or structural liquidity risk: Mismatch risk (or referred to as maturity mismatch) refers to the liquidity risk in the Bank's balance sheet structure due to maturity mismatches between assets and liabilities.
- b) Contingent Liquidity Risk: Contingent liquidity risk refers to unforeseen events that may pose a threat to the liquidity profile of the Bank. This risk may be relevant in the following cases:
 - I. Default by banks where the Bank's funds are placed.
 - II. Unexpected and material withdrawal of deposits by the clients.

Market liquidity risk: Market liquidity risk refers to the inability of the Bank to sell assets at or near current market prices. This may arise due to illiquid markets, market disruptions, or concentrations in certain positions and markets. As the liquidity risk strategy of the Bank is revisited by the Asset Liability Committee (ALCO) annually and thereafter approved by the Board Risk Compliance Committee (BRCC) to ensure its continued relevance to the current Liquidity conditions and the business strategy of the Bank. Treasury manages the liquidity risk exposures on an ongoing basis, while the Risk Management Department under the supervision of ALCO regularly reviews and reports liquidity risk exposures to the ALCO, BRCC.

Liquidity Ratio Analysis

Liquidity ratios act as indicators and as a tool to assess and monitor the Bank's liquidity position and condition on an 'as-is basis and under stressed market conditions. To assess its liquidity position, the Bank monitors various liquidity ratios against their respective limits. Accordingly, the Risk Department, in conjunction with the Treasury & Finance Department, computes and monitors regularly, to assess the adequacy of its liquid assets.

Liquidity Ratios	Description of the ratio	Purpose of the ratio
ELAR (Eligible Liquid Asset Ratio)	The ELAR establishes a liquid assets ratio that banks are required to meet, consisting of account balances at the CBUAE, central bank certificates of deposit, UAE federal government bonds and Sukuk (Islamic bonds), reserve requirements, UAE local government bonds, and foreign sovereign debt instruments.	The objective of this ratio is to ensure that liquidity risks are well managed at banks operating in the UAE and are in line with the Basel Committee for Banking Supervision (BCBS) recommendations and the best international practices.
ASRR	Advances to Stable Resources Ratio. The ASRR is a measure that recognizes both the actual uses as well as the likely uses of funds in terms of the contractual maturity and behavioral profile of the sources of funds available to the bank, to ensure that there are limited maturity mismatches and cliff effects. Central Bank report BRF 7 details the requirements of the ratio.	Banks fulfill an important role in the economy by providing maturity transformation (borrow short term and lend long term). These liquidity regulations aim to ensure that banks have a robust liquidity risk management and governance process in place to mitigate this imbalance. This follows CBUAE circular number 33/2015

Liquidity Stress Testing

Stress testing is a numerical quantification to determine the impact of any possible extreme event(s) on the Bank's balance sheet (including liquidity). Also, stress testing addresses the large movements in the Bank's liquidity position that lie beyond day-to-day risk monitoring but could potentially occur. The Bank ensures that stress testing is conducted periodically to determine the effects of both adverse historical events and hypothetical extreme future events. The Bank's stress scenarios cover a range of factors that can have a significant impact on its liquidity. To evaluate whether the Bank is sufficiently liquid, the behaviour of the Bank's cash flows under different conditions is observed. The Risk Management Department, in coordination with the Finance and Treasury Department, are responsible for carrying out stress testing periodically. The results of the stress tests and the proposed remedial action, if any, are reviewed by ALCO. The results of stress testing are communicated to the BRCC.

Contingency Planning

The Bank maintains a Contingency Funding Plan (CFP) which addresses the approaches to be followed in the event of a liquidity crisis. The primary objective of the CFP is to define a mechanism for managing the liquidity crisis at the Bank. The emphasis is on the activities to be followed during the liquidity crisis to restore the Bank's liquidity position, without adversely impacting its reputation or market perception.

8.2 LIQ1: Liquidity Coverage Ratio

Not applicable.

8.3 LIQ2: Net Stable Funding Ratio

Not applicable.

8.4 ELAR: Eligible Liquid Assets Ratio

1	High Quality Liquid Assets (AED 000s)	Nominal amount	Eligible Liquid Asset
1.1	Physical cash in hand at the bank + balances with the CBUAE	30,021,321	
1.2	UAE Federal Government Bonds and Sukuks	78,911	
	Sub Total (1.1 to 1.2)	30,100,232	30,100,232

	2.3.2	Interbank deposits with remaining life of more than 6 months	
	2.3.3	Refinancing of Housing Loans	
	2.3.4	Borrowing from non-Banking Financial Institutions	
	2.3.5	Customer Deposits	29,968,623
	2.3.6	Capital market funding/ term borrowings maturing after 6 months from reporting date	
	2.3.7	Total other stable resources	29,968,623
	2.4	Total Stable Resources (2.2+2.3.7)	32,167,547
3		Advances to Stable Resources Ratio (1.5/ 2.4*100)	4.38

9. Credit Risk

9.1 CRA: General Qualitative Information About Credit Risk

- 1. Credit Portfolio The Bank largely has retail and SME businesses as two segments along with a handful of wholesale obligors. The retail segment consists of credit cards to salaried and self-employed individuals based on individual income assessment. SME credit is split into large, Self-employed, unsecured loans and invoice-based supply chain finance.
- 2. Credit Governance- Each of the credit products has individual credit policies and SOP approved by the Board Risk Compliance Committee (BRCC) and credit committee. Policies in turn include guidelines to underwriting rules, loan assessment and thresholds for loss as well as early warning triggers. For risk mitigation, Wio also has risk mitigation policy involving collection activities.

The Credit Department is entrusted with underwriting and engaging in credit reviews. The Credit team ensures the documentation and limits entered into the system are in line with the credit approvals. The credit team is also responsible for monitoring and reviewing the portfolio as well as classification & provisioning.

The Compliance function is responsible for ensuring adherence to the regulations and guidelines. They also perform due diligence around the KYC and AML requirements.

Internal Audit is responsible for providing independent assurance to the Board as the third line of defense.

All the three functions viz. Credit Risk, Compliance, and Internal Audit, are independent functions.

3. Reporting- There is monthly/daily MIS reporting to management on risk aspects of credit. Also, the credit committee is conducted at the minimum 4 times a year and is updated on risk aspects. The same also applies to the board risk committee.

9.2 CR1: Credit Quality of Assets

		а	b	с	d	е	f
		Gross carry	ing values of		provisions for c	CL accounting credit losses on SA osures	
	(AED 000s)	Defaulted exposures	Non defaulted exposures	Allowances/Impairments	Allocated in regulatory category of Specific	Allocated in regulatory category of General	Net values (a+b-c)
1	Loans	1,520	778,414	(11,423)	(1,520)	(9,903)	766,991
2	Debt securities	-	28,511,091	(3,158)	-	(3,158)	28,507,933
3	Off-balance sheet exposures	-	-	-	-	-	-
4	Total	1,520	29,289,505	(14,581)	(1,520)	(13,061)	29,274,924

The Bank defines a financial instrument as in default, which is fully aligned with the definition of credit-impaired, when it meets one or more of the following criteria:

- Objective criteria: The obligor is more than 90 days past due on its contractual obligation to the Bank.
- Subjective criteria: The Bank considers a default to have occurred with regard to particular obligors when either one of the following events have taken place:
 - The Bank considers that the obligor is unlikely to pay its credit obligation in full
 - The Bank puts the credit obligation on a non-accrual status.
 - The Bank makes a charge-off or account-specific provision resulting from a perceived decline in credit quality subsequent to the Bank taking on the exposure.

A loan is considered to no longer be in default (i.e. to have cured) when it no longer meets any of the default criteria for a consecutive period of twelve months.

9.3 CR2: Changes in the Stock of Defaulted Loans and Debt Securities

S.No	Description	AED '000
1	Defaulted loans and debt securities at the end of the previous reporting period	-
2	Loans and debt securities that have defaulted since the last reporting period	1,520
3	Returned to non-default status	-
4	Amounts written off	-
5	Other changes	-
6	Defaulted loans and debt securities at the end of the reporting period (1+2-3-4±5)	1,520

9.7 CRD: Credit Under Standardized Approach

The Bank predominantly has retail individual card exposure, the credit assessment is based on internal credit policy rules using bureau, income, and demographic data. The risk weights are assigned based on the standardized approach.

Invoice-based supply chain finance exposures are treated as unrated and the risk-weights for the same are computed as per the CBUAE guidelines.

12. Market Risk

12.1 MRA: General Qualitative Information About Market Risk

MRA: General qualitative disclosure requirements related to market risk

Market risk is the risk arising from changes in the markets to which the Bank has exposure. The source of Market Risk Management for the Bank is foreign exchange risk.

Market Risk Governance Framework

The Market Risk framework forms the approach for controlling and minimizing exposure to market risk through identification, assessment, monitoring, and reporting on the various dimensions of market risk that the Bank is exposed to. The market risk management framework consists of market risk policy, market risk appetite and tolerance, and a market risk governance structure to ensure adequate controls and risk mitigation.

Market risk is controlled primarily through a series of different layers of limits and maintaining a dynamic investment allocation. These limits reflect the Bank's risk appetite in the context of the market environment and business strategy. In setting limits, the Bank takes into consideration many factors, including market volatility, product liquidity, and risk appetite. Market risk governance policies are reviewed annually to stay aligned with changing market conditions. At management level the market risk is monitored through Asset Liability Committee (ALCO) which convenes at least quarterly to assess the market risk exposures within the bank. The ALCO reports into the Board Risk and Compliance Committee (BRCC) which holds the ultimate responsibility for monitoring the market risk within the bank.

Currently, the market risk exposure for the Bank arises on account of its FX positions.

The Bank has limits set for Net Open Positions and regularly reviews the positions in relation to the limits set. The limits are typically higher for currencies that are pegged to AED and lower for floating rate currencies. This helps the Bank minimise its FX risk.

12.2 MR1: Market Risk Under Standardized Approach

		а
	(AED 000s)	RWA

13. Interest Rate

13.1 IRRBBA: Interest Rate Risk in the Banking Book

13.1.1 Interest Rate Risk in the Banking Book - Definition

Interest rate risk in the banking book is defined as the impact on the Bank's assets and liability exposures due to changes in interest rates. For the purpose of interest rate risk management, the Risk department at the Bank is responsible for monitoring and managing the risk. The computation uses Re-pricing gap and calculates the impact on Net Interest Income (NII) and Economic Value of Equity (EVE).

13.1.2 IRBB Management and Mitigation Strategy

The Bank continuously strives to evolve its risk management practices in line with the size and complexity of its business and regulatory/market practices.

- Repricing gap risk which measures the risk arising from the timing differences in the maturity and repricing of instruments' rate changes.
- Yield curve risk which expresses the losses if interest margin rates change for various terms and different currencies.
- Basis risk which covers the impact of relative changes in interest rates for financial instruments that have similar tenors but are priced using different interest rate indices.
- Option risk that arises from option derivative positions or from optional elements embedded in the on- and off-balance sheet positions, where a bank or its customer can alter the level and timing of their cash flows.
- Basis risk and Option risk are currently not material for the Bank but will be monitored as the Bank continues to grow.

The Bank is using both impact on NII and EVE for assessing the impact of interest rate movements on its Banking book. In addition to the standard shocks as prescribed by the "Model Management Guidance" note issued by the CBUAE in Nov 2022, the Bank also conducts stress tests by considering impact of stressed shocks on NII under Mild, Moderate and Severe scenarios and assesses the impact on profitability and capital.

The measurement of IRRBB includes the impact of rate shock on EVE and NII based on IRRBB guidelines.

13.1.3 Interest Rate Shock and Stress Scenarios

As per the IRRBB guidelines by CBUAE- Model Management guidance note, the Bank uses the following 6 rate shock scenarios described in the aforementioned document to estimate impact on EVE and NII:

- Parallel Shock Up
- Parallel Shock Down
- Steepner
- Flattener
- Short rate Shock up
- Short rate Shock Down

13.1.4 Key Modelling and Parametric Assumptions

IRRBB in the Bank is quantified as the change in EVE or NII of the Bank due to change in interest rates. All future cash flows represent earnings or payments from the point of view of the Bank. These cash flows are segregated into time period buckets by constructing a residual maturity / re-pricing schedule. For non-maturity deposits (NMD), the Bank is segregating the core, noncore portion on a judgmental basis (given the current lack of historical data), within the prescribed caps for NMD behavioral distribution. The cash flows are considered as part of the repricing gap and discount factor does not consider any commercial margins.

Quantitative disclosure						
1	Average repricing maturity assigned to NMDs	Retail NMDs	0.63 years			
1	Average repricing maturity assigned to NMDs	Corporate NMDs	1.13 years			
2	Longest repricing maturity assigned to NMDs	Retail NMDs	4 years			
2	Longest repricing maturity assigned to NMDs	Corporate NMDs	4 years

14. Operational Risk

14.1 OR1: Operational Risk Framework

Operational Risk is defined as the risk of loss resulting from inadequate or failed internal processes, people, systems, or external events. The Bank has adopted the Basel risk definition of operational risk according to which strategic and reputational risk are excluded from purview of operational risk.

Operational Risk Governance

Operational Risk Management (ORM) starts with the Board of Directors, who have assigned the responsibility to BRCC. The BRCC approves the operational risk management policy as well as the operational risk appetite. The implementation of the ORM framework across the Bank sits with the Risk Management department. BRCC are also responsible for monitoring adherence to the policies and risk appetite and escalation of breaches to the right authority for necessary corrective actions. The first line of defence, which consists of all business and front-line units, are primarily responsible for managing operational risks inherent in the products, activities, processes, and systems for which they are accountable. The risk management department has a dedicated operational risk unit under it.

Each Business Unit has an Operational Risk Champion(s) whose responsibility is to investigate and report any significant risk incidents / issues in their business unit to operational risk management for immediate action as well as assisting in implementation of ORM frameworks and identifying and recording Key Risk Indicators (KRIs) and submitting to the ORM department on a periodic basis.on a periodic basis.

ORM Framework

Wio bank has established an Operational Risk Management Framework to manage operational risk in an effective and comprehensive manner, fully integrated into the overall risk management processes. The ORM framework outlines the strategic

approach implemented for operational risk management and enables a culture for effective implementation of risk management processes.

The ORM framework includes the tools used for OR assessment across the Bank to support identification, measurement, and monitoring of operational risk exposures of the business at all levels. ORM components provide the foundation to capture all OR contributors paving way for root cause and control effectiveness analysis, which plays an important role in inherent and residual risk evaluation.

The major tools underpinning the identification and assessment of OR in the ORM framework are as follows:

- o Risk and Control Self-Assessment (RCSA)
- o Loss/Incident Data Management (LDM)
- o Key Risk Indicators (KRIs)

Loss/Incident Data Management (LDM):

Operational loss event is an incident leading to alteration in the expected outcome(s) of a business activity or process due to inadequate or failed processes, people, system, or external events. Operational loss events are further classified into:

- o Actual Loss Event: An incident that has resulted in financial loss for the bank.
- o Near Miss Event Event(s) that did not result in loss but had the potential to do so.
- o Potential Loss Event: An incident that has been detected and may ultimately translate into financial loss or near miss for the Bank.

Reporting of loss events is an important component of the risk management program. The objective of LDM is to provide a consistent and structured approach to identify, capture, analyze and report on operational losses for assessing bank's exposure to OR, the effectiveness of internal controls, causes of large losses and information on whether control failures are isolated or systematic.

Risk Control Self-Assessment (RCSA):

In RCSA, the bank assesses the processes which are central to its operations, against a library of potential threats and vulnerabilities and evaluating their potential impact.

It consistently evaluates risks with the following key considerations:

- o Inherent Risk i.e. risk status before controls are considered.
- o Residual Risk i.e. risk status after controls are considered.

The RCSAs are used on an enterprise-wide basis, including for control functions such as Risk Management, Compliance, etc.

Key Risk Indicators (KRIs):

KRIs are an important component of the operational risk management framework. It is defined as a measure that attempts to identify potential operational losses before such losses happen and translate risk dimensions into tractable and measurable events. They are used to identify trends within business activities and compare them to a predetermined threshold as well as monitor the main drivers of exposure associated with key risks.

Risk Mitigation Techniques

Apart from the regular monitoring and review, Bank shall utilize specific measures to mitigate the risks arising out of operational risk. The measure includes but are not limited to the following:

o Control Effectiveness Review: After each risk assessment, ORM function reviews existing control effectiveness and coordinate with other departments for new control implementation based on risk priority.

- o Business Continuity Plan (BCP): Banks are exposed to disruptive events which may be severe and can disrupt core functions and bank's normal business. In order to address this, Wio has established Business Continuity Plans.
- o Insurance: Insurance is one of the ways to transfer the risk and insure the bank against Operational Risk losses. Based on the nature and risk criticality, Risk Management coordinates with the related department to ensure adequate insurance coverage is available.

Risk Escalation

Risk Escalation is a critical component of the ORM framework to ensure that any operational incident is recognized, understood, and managed at the appropriate level of seniority within the Bank.

Risk Reporting

Operational risk reporting plays a crucial role in providing executive management and the board of directors with a comprehensive understanding of the organization's risk landscape. It encompasses the identification, assessment, monitoring, and mitigation of risks that may impact the organization's operational efficiency and effectiveness.

The Operational Risk Forum reports into the Management Risk Committe who reports into BRCC and escalates matters that require escalation or addressing by BRCC. By effectively communicating these risks, executive management and the board can make informed decisions about risk tolerance and mitigation strategies, thereby safeguarding the organization's assets and reputation.

Risk Appetite and Threshold

The Strategy for managing OR is targeted towards calibration of identified risks against Bank's Risk Appetite Statement as well as thresholds or limits for inherent and residual risks ensuring consistency of risk identification and assessment on a bank-wide as well as wide basis. Operational Risk appetite is maintained and tracked on a continuous basis.

Operational Risk Capital Charge

Central Bank of UAE (CBUAE) issued a Guidance and Standards around the methods allowed to be used for computing the capital charge for operational risk for UAE banks

- o Basic Indicator Approach (BIA)
- o The Standardized Approach (TSA)/Alternative Standardised Approach (ASA)

Given Wio's product nature, business complexity and size, the bank follows Basic Indicator Approach for calculating regulatory capital requirements for OR.

15. Remuneration

15.1 REMA: Remuneration Policy

The remuneration policy is a robust framework designed to both reward employees and manage risk effectively. It outlines various forms of compensation and is instrumental in supporting sustainable growth and enhancing shareholder value, fostering a culture of pay-for-performance that attracts, motivates, and retains skilled and experienced employees. It upholds the highest standards of ethical decision-making, corporate governance, and is in compliance with legal and regulatory requirements. It also ensures fairness, equity, and transparency in practices, reinforcing the Bank's core values.

Scope

This policy applies to the Bank's Board and its employees.

Renumeration Principles

The Bank's remuneration is:

- Aligned with business strategy and risk management framework.
- Based on job role, responsibilities, skills, and experiences.
- Based on clear, objective, and transparent quantitative and qualitative metrics and criteria embedded within a performance management system designed to promote a culture of high performance, accountability, compliant and ethical behavior.
- In compliance with all applicable laws, regulations, rules, and CBUAE guidance.
- Composed of fixed, variable, and discretionary components, and subject to risk-adjustment and deferral periods as required by law and regulations.
- Structured to discourage excessive risk-taking or reward inappropriate behavior.
- Structured to ensure claw back or withholding in case of non-compliance with applicable laws and regulations, or in the event of poor performance or misconduct.

Overview of performance metrics

The performance metrics for the business teams is based on Balanced Scorecard and divided into four distinct perspectives and competencies metrics.

- Financial metrics that focus on key financial targets including Total Revenues, Total Costs, Net Profit and key drivers.
- Operational metrics that focus on contribution to the overall growth of the business through delivering key project launches, timely completion of compliance and risk related actions, and timely completion of Audits, both internal & regulatory.
- Customer metrics that focus on activities that deliver a high-quality service to both internal and external customers, such as Total Customer Base, Net Promoter Score, Customer Satisfaction Rate, and App Store Rating.
- People metrics that focus on employee engagement score, achieving nationalization of the workforce and continuous learning of the employees.

The bank sets performance objectives for its employees at the start of the performance year, and the attainment of performance metrics is assessed throughout the year based on a five-point rating scale. The employee performance metrics are separated into two distinct perspectives: KPIs and competencies metrics.

KPIs focus on key targets and are measured bi-annually.

Competencies metrics focus on behavior and values.

The Bank's Performance Management process ensures there is a transparent and objective link between performance and rewards. At the end of each performance cycle, all employees are rated against a five-point rating scale based on the KPIs achieved by the employee. Employees who are rated 'Unsatisfactory' and 'Developing' for the performance year under consideration are not eligible to receive bonus/variable pay.

The total compensation offered to employees includes fixed and variable compensation. Fixed compensation includes Basic Salary and Allowances, and is a non-discretionary payment made to employees based on their job role and responsibilities and is independent of the Bank's performance.

Variable pay consists of any discretionary payments including annual bonus and deferred variable pay approved as per the Board's Delegation of Authority.

Functions of Board Executive Committee (BEC) & Board Nomination and Remuneration Committee (BNRC)

The Board Executive Committee & Board Nomination and Remuneration Committee (BNRC) are responsible for governing the Bank's remuneration framework as defined in the respective Delegation of Authority.

Senior Managers and Material Risk Takers

Employees that are part of the Executive Management team have been classified as Senior Managers. Material Risk Takers (MRTs) are employees identified based on their potential to take or influence significant risks to the Bank, including reputational risk. This includes senior management, key staff, and employees in roles that directly involve risk-taking activities, as determined through an annual assessment.

For employees determined to be Senior Managers or Risk Takers, the Bank ensures that:

- A portion of their pay is based on individual, business-unit, and bank-wide performance measures.
- A significant portion of variable pay is deferred for at least three years (the percentage of deferred compensation will be according to the seniority).
- The Bank is able to clawback portions of deferred variable compensation if required, in the event of negative contributions to the bank or relevant line of business.
- Salaries are benchmarked in consultation with independent sources.

Special Payments

The Bank aims to provide a fair and transparent system of compensation that motivates and incentivizes employees to achieve their best while aligning their interests with the long-term success of the bank.

The Bank rewards individual and overall bank performance. The Bank believes in attracting and retaining top talent and therefore may offer retention bonuses and sign-on awards to new employees. In the event of an employee leaving the bank, the Bank may also offer severance payments to help ease their transition.

However, the Bank is also committed to responsible financial management and ensuring that any net losses reported in the financial year will result in a contraction of the employee bonus pool.

15.2 REM1: Remuneration Awarded During the Financial Year

	(AED 000s)		a	b
	Remuneration Amount		Senior Management	Other Material Risk-takers
