Labor Data Revisions Expose Fed's Blind Spot

Yet another large labor market data revision last night (-911K vs. -682K consensus) further strengthens the view that faulty data has been distorting reality, systematically putting the famously "data-dependent" Fed behind the curve. The overnight market reaction, where US Treasuries rallied but risk assets fell (although they've since partially recovered), suggests that the reality gap is so significant that a growth scare is rearing its ugly head again. The revision covers the April 2024 – March 2025 period, implying that job market weakness has been a problem for over a year. Famed Fed watcher Jeff Snider has been asserting that the weakness in the global economy is structural, burdened by an impaired banking system since the 2008 GFC. He argues that this reality is often camouflaged by deficient macro data, flawed frameworks, and narrative-driven asset price rises. Whether or not you believe his assessment, he is now among a growing number of pundits expecting a 50bp rate cut at the September 17 FOMC meeting.
