Bullish Institutional BTC News: ETF NAV and Options

US-based spot bitcoin ETFs have reached a new all-time high in net asset value, now collectively holding over \$66 billion worth of bitcoin. This milestone represents nearly 5% of bitcoin's total market cap and comes after a strong week of inflows, with the funds attracting over \$2 billion. The surge in value was aided by bitcoin's price increase to above \$68,000, inflating the holdings of each ETF. The institutional momentum in the bitcoin market continued as the SEC granted "accelerated approval" for major exchanges NYSE and Cboe to list options trading for several of these ETFs. This move allows for expanded trading possibilities on funds such as the Fidelity Wise Origin Bitcoin Fund, BlackRock's iShares Bitcoin Trust, and others. While the timeline for the actual launch of these options remains unclear, the approval marks another step in the maturation of bitcoin-based financial products in traditional markets.
