MSTR Valued at 2.5x BTC: Is It A Bubble?

MSTR’s +16% daily move Friday has stirred debates around its fair value over the weekend, as the company is currently valued at 2.5x its BTC holdings. [Adam Back](#) compares it to a REIT accessing low-cost funding “during a multi-decade property development gold rush in prior-century New York.” The analogy fits given that 1) the market values REITs investing in growth assets (e.g. data center REITs) at a premium to NAV, 2) MSTR’s ability to access funding via TradiFi market is akin to how REITs re-mortgage or issue new shares. The fact that almost no other listed companies are copying the MSTR’s BTC strategy despite its stellar track record (+1,1615% return outperforming NVDA’s +1,173% since its BTC strategy in 2020) illustrates that how early we are in the BTC adoption cycle.

Marking-to-market its BTC holding within the next 6 months as per its guidance at the last earning’s call may encourage others to notice and emulate. Japan’s Metaplanet seems to be fully on board already, as indicated by [last week’s disclosure](#) of additional BTC purchases for its treasury.
