Jay Powell said at an ECB forum overnight that inflation is cooling but that it's too soon to say the Fed can cut rates by the end of the summer. Regardless, investors increasingly anticipate rate cuts soon; the CME futures currently imply a 67% chance of a rate cut in September, up from 45% a month ago. One macro data point that has recently come into focus is the monthly job openings data, which has been trending down consistently since mid-2022. A few Fed officials have commented that the job market is nearing an inflection point, where further slowing could lead to rising unemployment.
