Gold's 4.5-Sigma Crash: Key Lessons

Amid the flurry of comments on gold's 6% dump last night, one thing no one will say is "gold is supposed to be a safe haven asset, so what gives? (with sarcasm/smirk)." This contrasting reaction to physical versus digital stores of value illustrates two points. First, the public's differing attitudes toward the two assets, which offer essentially the same utility (store of value), is nothing more than "familiarity": one has been around longer than the other. Second, and more importantly, an asset's efficacy as a store of value isn't measured over the short-term but only over the long-term, because it's about preservation of purchasing power, NOT daily price fluctuations. The public intuitively understands this, never questioning gold's safe-haven status after a sharp drop like last night's, yet can't resist doing so when the same befalls its digital counterpart. But the data doesn't lie; it's there for all to see. When it comes to preserving value, no one comes close to Bitcoin (see below).

How many housing units can I purchase using different stores of value?
