- The crypto market saw a sharp sell-off as U.S. equities tumbled. As of now, \$BTC is trading at \$86,613 and \$ETH at \$2,832, with Bitcoin dominance at 58.97%.
- The long-delayed September jobs report showed the U.S. added 119,000 jobs—well above expectations—while the unemployment rate rose to 4.4%, its highest since 2021. FedWatch now assigns roughly a 40% probability to a December rate cut, keeping hopes for near-term easing alive despite the Fed's recent hawkish tone.
- A few other headlines include: G NEXUS sold 10,922 ETH for share buybacks with 40,005 ETH remaining; Polymarket odds that Monad's FDV will be under \$3B at launch have slipped below 50%; and Kalshi has closed a \$1B funding round at an \$11B valuation, according to TechCrunch.
- During the last 24 hours, the top three gainers were \$FTN, \$PI, and \$AB, while the top three losers were \$SOON, \$MYX, and \$TEL.

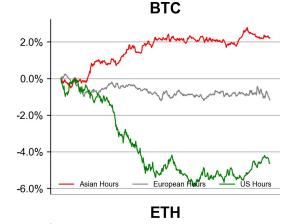

# The Under-the-Radar Risk That Killed Yesterday's Rally

The commentators' explanations for the last night's mid-day market plunge (the S&P +1.5% early before suddenly dropping to close at -1.6%) range from lingering Al-bubble concern to Friday's option expiry, but the most under-discussed risk factor, especially among the crypto investors, is the risks associated with private credit sector. Nervousness has been mounting for months, as junk-bond yield spreads continue widening. Fed Governor Lisa Cook amplified those concerns last night, warning of the contagion from private credit impairment. This echoed recent news that a BlackRock-managed private credit CLO failed key over-collateralization tests amid rising bad loans, forcing the firm to waive management fees. Ironically, if Cook's warnings prove prescient and influence Fed policy, they could tilt the balance back in favor of a Dec. rate cut to cushion any fallout. Sure enough, CME futures' rate cut odds have edged up last night to 39% from 30%.
