

By creating the R/OCIP, DFW Airport can provide superior safety management, site control, insurance cost savings and an ability to mitigate losses (risks) for large, long-term construction projects. In addition, the “rolling” feature of the R/OCIP allows the program to continue through all phases of TRIP and beyond to future large scale projects.

Rolling Owner Controlled  
Insurance Program

## Comprehensive Insurance and Risk Management Program

*Why provide a Rolling Owner Controlled Insurance Program (R/OCIP) for DFW Airport's construction renovations?*

Creating the R/OCIP, DFW Airport can offer:

- Broader coverage by leveraging premium volume with the insurer with higher insurance limits
- Ensure no gaps exist between contractor and subcontractor coverage
- Enhance loss control with additional safety staffing
- Greatly improved control over management of claims using cost control techniques

The R/OCIP components include:

### Insurance and Administration

- Contractor/subcontractor enrollment
- Employee background checks
- Drug screening
- Site badging

### Claims Management

- Investigation
- Medical referral
- Case management
- Return to work programs

### Capital Assistance & Bonding

- Underwriting Assessment
- Contractor training seminars

### Safety/Training

- Dedicated safety training facility
- Mandatory, two-day training program that includes:
  - Orientation video
  - OSHA 10-hour class
  - English/Spanish construction language basics
  - CPR/First Aid overview
  - Job hazard analysis/pre-task planning
  - Tailored/specific construction safety needs
- Supervisors participate in an additional one-day training course covering: management skills (leadership, communication, conflict resolution) and cultural awareness.

DFW can offer three program features to all contractors and subcontractors on the R/OCIP – a real advantage to smaller contractors, since many would not normally benefit from these features through their individual insurance programs.
