

5 - Product Storage, Order Processing, Packaging, and Shipment

5 modules

About this Learning Plan

Learn about how products and materials move through warehouses and distribution centers, from raw-material extraction through customer fulfillment. Discover the most common approaches to packaging, shipment, product storage, and order processing.

Principles of Material Flow (Part 1)

This course will provide an overview of material flow and handling and cover the first two principles of material flow in a supply chain. By the end of this course, you will be able to understand material flow, identify best practices in material handling, and describe the first two principles of material flow in a supply chain.

E-Learning

Duration: 40m

Principles of Material Flow (Part 2)

This course will provide an overview of the five remaining principles of material flow. By the end of this course, you will know the principles of material flow in a supply chain. You will also understand the benefits of following these principles and the possible impact if they are not followed.

E-Learning

Duration: 45m

Packaging and Shipment

By the end of this course, you will be able to explain the purpose of packaging and labeling, explain how packaging and labeling are used in shipping products, describe the importance of quality assurance in the shipping function, explain the loading and shipping processes, and identify the characteristics of common shipping documents.

E-Learning

Duration: 45m

Warehousing and Distribution Program Learning Plans

Contribute at a higher level throughout your career as a warehousing and distribution professional.

Order Processing

This course will provide a detailed description of the procedures for processing and fulfilling a customer order. By the end of this course, you will be able to explain the order fulfillment cycle and describe how to improve order accuracy and efficiency. You will also be able to describe procedures for inspecting an order and staging products for shipment.

E-Learning

Duration: 40m

Product Storage

This course will familiarize you with product storage and how products are processed in a warehouse. This course will also review the key issues that affect storage and the different types of storage methods. You will also learn about the automated storage and retrieval system. By the end of this course, you will be able to explain how uploaded products are processed and the different types of storage methods. You will also be able to identify the key issues that affect products storage and describe an automated storage and retrieval system, or AS/RS, as well as its advantages and disadvantages.
