Haulier Enterprise – Fully Browser Based TMS

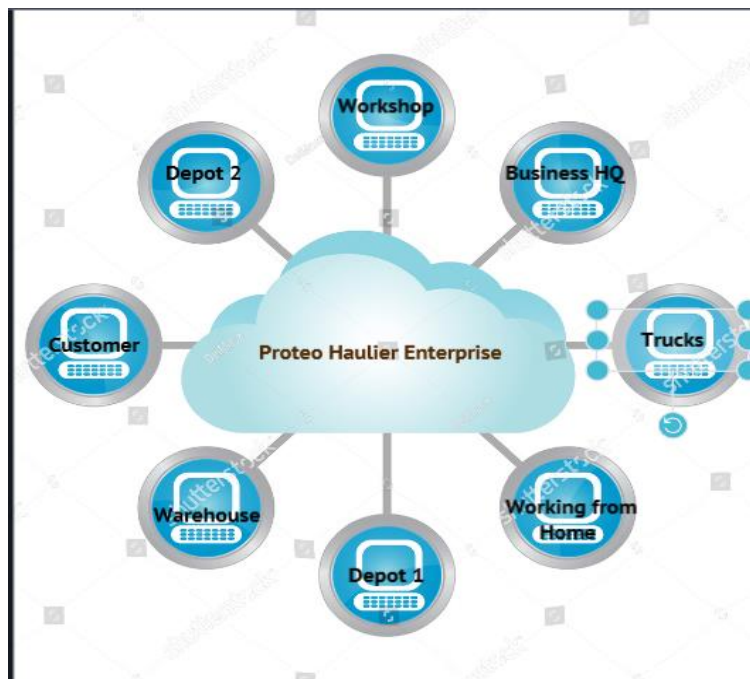

The UK Haulage landscape is changing every day, merges and acquisitions (M&A) are taking place, businesses grow and then the business faces the need for change or struggle. When companies merge, each with their own legacy systems, the need to manage and view performance via disparate systems becomes hard work. Proteo Haulier Enterprise (HE) has addressed this issue with a **True Browser Based TMS**, not to be confused by a Browser Enabled TMS.

Haulier Enterprise can be **Securely Accessed from any PC / Location by users with role based access rights**. The benefits delivered by this capability are numerous and remove obstacles being experienced by existing solutions. You now have un-restricted, secure access to operate from any global location without the need for 3rd party software.

Benefits

- Rapid Deployment – No locally based software to install or manage
- Multi Location – Remote locations can be established without any infrastructure investment
- Business Interruption – The ability to re-locate operations should the need arise
- Upgrades & Support – No need to put the business on-hold waiting for engineers
- Visibility – On-Call access can be gained from any location, reducing travel time

The freedom to grow your business

Intelligent Logistics At Its Best
