

# PROTEO

## BENEFITS OF INTEGRATION

Integration seems to have a different meaning to different system providers and some even push you to external sites to access data. Proteo and [Haulier Enterprise](#) see integration as a way to simplify complexity, automate manual tasks, remove human error and to do this we bring all that data to you, you will never need to leave the solution.

[Haulier Enterprise \(HE\)](#) allows you to connect and sync data across all of your systems from Accounting to Pallet Networks to workshop systems.

With HE when you need to deliver your consignments via a [Pallet Network](#), you simply sub-contract the work with a click of the mouse. This simple process ensures that time can be used to focus on increasing efficiency and profitability.

Haulier Enterprise continues to simplify the EDI process with automated 2-way integration, allowing orders to be received and status updates sent back. With integration levels of 80%, our clients are already experiencing the benefits, saving in excess of 40 hours per month by removing the need to re-key orders.

To learn more about how Haulier Enterprise will work for you, call for information and demo.
