

Proteo Demurrage

The Problem:

'Time is Money'. This saying is especially true for hauliers where the nature of their business (high % of fixed cost) requires them to keep the utilization of their vehicles high, in order to have a realistic chance to survive in the industry.

Probably nothing frustrates a haulier more than having his vehicles kept idle and waiting by the customer. Claiming demurrage when a vehicle is kept waiting on the customer side becomes almost impossible without granular and real-time data on the wait times..

Introducing Proteo Demurrage:

The timely capture and reporting of wait time data through Proteo Demurrage gives the haulier a possibility to add a significant percentage to his bottom line, and gain a significant competitive advantage.

It provides alerts and reporting to ensure that the right people have the right information at the right time to register a claim. Using this service could add more than 1% to your bottom line and improve your profits by over 25%

- Planners will be alerted when one of their drivers has been On-Site for longer than the expected time. In addition to emails, the alerts are shown on his desktop no matter what screen he is using, so he can take immediate action.
- The Demurrage report provides them all of the information they need to contact the customer to register the demurrage claim.
- Planners have as much flexibility as they need and can set the allowed time On Site on a per customer basis.
- Finance team can run reports to access all the demurrage claims for a customer, and invoice accordingly
