<sup>a</sup> Denominator is patients with a BSA ≥3 for each given group. When calculating the % of patient that shifted from BSA ≥3 at baseline to BSA < 3 at W12, the number of patient that shifted is divided by patients that had a BSA ≥3 at baseline. <sup>b</sup> N=136; <sup>c</sup> N=32; <sup>d</sup> N=32

<sup>e</sup> Denominator is total population for each given group. When calculating the % of patient that shifted from BSA ≥3 at baseline to BSA < 3 after 12 weeks, the number of patient that shifted is divided by the total population for each group.
