Special fire fighting procedures:

Do not enter confined fire area without full bunker gear including a positive pressure niosh approved self-contained breathing apparatus. Cool all fire exposed containers with water. Minimize contact with material.

Unusual fire and explosion hazards:

Closed containers may explode when exposed to extreme heat. Solvent vapors may be heavier than air. Remove all sources of ignition and ventilate the area. Wear appropriate protective equipment such as vapor cartridge or air supplied respirator when necessary. Dike and absorb the material with absorbent such as clay and place in disposal containers.

## SECTION 7: HANDLING AND STORAGE

Precautions to be taken in handling and storage:

Store in cool dry area. Seal all partially used containers. Wash with soap and water before eating, drinking, smoking or using the toilet facilities. Mixed materials contain the hazards of all the components, therefore, read the msds' s of all the components prior to using the material. Properly label all containers.

Other precautions:

Avoid all skin contact. Avoid breathing vapors generated from the material. Observe conditions of good general hygiene and safe working practices. Contaminated leather articles cannot be cleaned and must be discarded if contaminated with this product. Wash all contaminated clothing prior to the reuse thereof. Supply appropriate ventilation or engineering controls prior to using this product.

## SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

Respiratory protection:

Use a niosh approved respirator as required to prevent over-exposure to vapor in accordance with 29 cfr 1910.134. Use a positive pressure respirator when airborne concentrations are not known or if exceeding tlv' s or if working in a confined space. Always consider the hazards from all components in the mixed material state.

Ventilation :

Exhaust ventilation sufficient to keep the airborne concentrations of the solvents and other hazardous materials below the toxic level concentrations.

Protective gloves:

Impervious gloves – neoprene or rubber.

Eye protection:

Splash goggles or glasses with side shields. If the environment warrants, a full face shield should be employed.

Other protective clothing or equipment:

Wear body covering clothing and other coverings as necessary such as an apron and appropriate footwear to avoid contact.

HMIS HAZARD CLASSIFICATION

HEALTH: 2      FLAMMIBILITY: 3      REACTIVITY: 1      PERSONAL PROTECTIVE EQUIPMENT: G

POTENTIAL HEALTH EFFECTS

EYES:

Can cause severe irritation, redness, tearing or blurred vision as well as corneal opacity and conjunctivitis.

SKIN:

May cause irritation, defatting, and dermatitis.

SKIN ABSORPTION:

Can cause reddening, swelling, rash, scaling or blistering. Overexposure may cause sensitization resulting in reaction to contact of small amounts.

INGESTION:

Can cause gastrointestinal irritation, nausea, vomiting, diarrhea. Aspiration of material into the lungs can cause chemical pneumonitis which can be fatal. Can cause corrosive action to mucous membranes and digestive tracts.

INHALATION health risks and symptoms of exposure:

Can cause nausea and respiratory irritation, dizziness, weakness, fatigue, nausea, headache, and possible unconsciousness. Burning sensation to mucous membranes, shortness of breath and flu like symptoms may occur.

HEALTH HAZARDS (ACUTE AND CHRONIC):

Can cause sensitization by exposure through contact or high concentrations of vapor. Over-exposure to this material can cause cardiac abnormalities. Overexposure can possibly cause anemia. Liver abnormalities, kidney damage or eye damage. May cause asthma or other respiratory disorders, bronchitis, emphysema, hyperactivity and eczema.

Chronic Inhalation: as a result of previous repeated overexposures or a single large dose, certain individuals will develop isocyanate sensitization (chemical asthma), which will cause them to react to a later exposure to isocyanate at levels well below the TLV or MGL. These symptoms, which include chest tightness, wheezing, cough, shortness of breath or asthma attack, could be immediate or delayed up to several hours after exposure. Similar to many nonspecific asthmatic responses, there are reports that once sensitized an individual can experience these symptoms upon exposure to dust, cold air, or other irritants. This increased lung sensitivity can persist for weeks and in several years. Chronic overexposure to isocyanates has been reported to cause lung damage, including decrease in lung function, which may be permanent. Sensitization may either be temporary or permanent.

Acute skin Contact: Isocyanates react with the skin protein and moisture and can cause irritation. Symptoms of skin irritation may be reddening, swelling, rash, scaling, or blistering. Some persons may develop skin sensitization from skin contact. Cured material is difficult to remove.

Chronic Skin contact: Prolonged contact with the isocyanate can cause reddening, swelling, rash, scaling, or blistering. In those who have developed a skin sensitization, these symptoms can develop as a result of contact with very small amounts of liquid material or even as a result of vapor-only exposure.

MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE:

Respiratory conditions or other allergic response.

CARCINOGENICITY

SKIN:

For extreme exposure use a safety shower immediately. Wash affected area with soap and water and remove contaminated clothing promptly.

INGESTION:

Do not induce vomiting. Keep person warm and consult a physician immediately. Give 1-2 cups or milk or water to drink.

### SECTION 5: FIRE FIGHTING MEASURES

Flammable limits in air,                      upper: not available  
(% by volume)                                  lower: not available

Flash point: 91f

Method used:

Seta flash

Extinguishing media:

Foam, alcohol foam, co2, dry chemical

Special fire fighting procedures:

Do not enter confined fire area without full bunker gear including a positive pressure niosh approved self-contained breathing apparatus. Presence of solvents in product may require grounding. Remove all sources of ignition.

Unusual fire and explosion hazards:

If fire occurs, solvents may produce excessive pressure. Sealed drums may rupture and ignite. Vapors are heavier than air and may travel along the ground and ignite by any source of ignition. During a fire, hdi vapors and other toxic gasses may be evolved. Containers may burst if contaminated with water. Vapor flashback to source is possible.

### SECTION 6: RELEASE MEASURS

Steps to be taken in case material is released or spilled:

Wear respirator and protective clothing. Remove all sources of ignitions. Remove excess with spark proof equipment, and the remainder with an absorbent such as clay and place in disposal containers. Contained air respirator may be necessary.

### SECTION 7: HANDLING AND STORAGE

Precautions to be taken in handling and storage:

Store in cool dry place, seal all partially used containers. Wash with soap and water before eating, drinking, smoking, or using the toilet facilities. Mixed materials contain the hazards of all the components, therefore, read the msds' s of all the components prior to using material. Properly label all containers. Keep material away from all sources of ignition.

Other precautions:

Avoid all skin contact. Avoid breathing vapors generated from the material. Observe conditions of good general hygiene and safe working practices. Contaminated leather articles cannot be cleaned and must be discarded if contaminated with this product. Wash all contaminated clothing prior to the reuse thereof. Wear appropriate safety equipment and respirator at all times when ventilation is not sufficient to control vapors. Observe osha regulations for respirator use (29 cfr 1910.134). When spraying material avoid exposure to all mists generated by using air supplied respirator.

## **SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION**

Respiratory protection:

Use a niosh approved respirator as required to prevent over-exposure to vapor in accordance with 29 cfr 1910.134. Engineering or administrative measures should be taken to reduce the risk and exposure. Use a positive pressure supplied air respirator when exceeding tlv' s or if hdi monomer concentrations exceed acceptable limits or when spraying material.

Ventilation :

Exhaust ventilation sufficient to keep airborne concentrations of hdi below their tlv and mgl maximum. Refer to patty' s industrial hygiene and toxicology- volume 1 (3<sup>rd</sup> edition) chapter 17 and volume iii (1<sup>st</sup> edition) chapter 3 for details.

Protective gloves:

Impervious gloves – neoprene or rubber.

Eye protection:

Splash goggles or glasses with side shields. Do not wear contact lenses when using this product.

Other protective clothing or equipment:

Wear body covering clothing and other coverings as necessary such as an apron and appropriate footwear to avoid contact.

Work hygienic practices:

Observe good general hygienic practices.

See section three for occupational exposure limit values.

## SECTION 4: FIRST AID MEASURES

### EYES:

Flush eyes with water for at least fifteen minutes and consult a physician.

### SKIN:

Wash affected area with soap and water and remove contaminated clothing promptly.

### INGESTION:

Do not induce vomiting. Never give anything by mouth to an unconscious person. Consult a physician.

### INHALATION:

Remove victim to fresh air area and administer oxygen if necessary. Consult a physician if necessary.

## SECTION 5: FIRE FIGHTING MEASURES

Flammable limits in air, upper: not available  
(% by volume) lower: not available

Flash point: 100f

Method used:

Seta flash

Extinguishing media:

Foam, alcohol foam, co2, dry chemical, water fog.

Special fire fighting procedures:

Do not enter confined fire area without full bunker gear including a positive pressure niosh approved self-contained breathing apparatus. Cool all fire exposed containers with water. Minimize contact with material.

Unusual fire and explosion hazards:

Closed containers may explode when exposed to extreme heat. Solvent vapors may be heavier than air. Under conditions of stagnant air, vapors may build up and travel along the ground to an ignition source which can result in flash back to the source of the vapors. Toxic vapors could be evolved from the combustion of this material.

## SECTION 6: RELEASE MEASURES

Steps to be taken in case material is released or spilled:

Remove all sources of ignition and ventilate the area. Wear appropriate protective equipment such as vapor cartridge or air supplied respirator when necessary. Dike and absorb the material with absorbent such as clay and place in disposal containers.

## SECTION 7: HANDLING AND STORAGE

Precautions to be taken in handling and storage:

Store in cool dry area. Seal all partially used containers. Wash with soap and water before eating, drinking, smoking or using the toilet facilities. Mixed materials contain the hazards of all the components, therefore, read the msds' s of all the components prior to using the material. Properly label all containers.

Other precautions:

Avoid all skin contact. Avoid breathing vapors generated from the material. Observe conditions of good general hygiene and safe working practices. Contaminated leather articles cannot be cleaned and must be discarded if contaminated with this product. Wash all contaminated clothing prior to the reuse thereof. Supply appropriate ventilation or engineering controls prior to using this product.

## SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

Respiratory protection:

Use a niosh approved respirator as required to prevent over-exposure to vapor in accordance with 29 cfr 1910.134. Use a positive pressure respirator when airborne concentrations are not known or if exceeding tlv' s or if working in a confined space. Always consider the hazards from all components in the mixed material state.

Ventilation :

Exhaust ventilation sufficient to keep the airborne concentrations of the solvents and other hazardous materials below the toxic level concentrations.

Protective gloves:

Impervious gloves – neoprene or rubber.

Eye protection:

Splash goggles or glasses with side shields. If the environment warrants, a full face shield should be employed.  
Other protective clothing or equipment:  
Wear body covering clothing and other coverings as necessary such as an apron and appropriate footwear to avoid contact.  
Work hygienic practices:  
Observe good general hygienic practices.

See section three for occupational exposure limit values.

## HMIS hazard classification

Health: 2      Flammibility: 3      Reactivity: 1      Personal protective equipment: g

## Potential health effects

### Eyes:

Can cause severe irritation, redness, tearing or blurred vision as well as corneal opacity and conjunctivitis.

### Skin:

May cause irritation, defatting, and dermatitis.

### Skin absorption:

Can cause reddening, swelling, rash, scaling or blistering. Overexposure may cause sensitization resulting in reaction to contact of small amounts.

### Ingestion:

Can cause gastrointestinal irritation, nausea, vomiting, diarrhea. Aspiration of material into the lungs can cause chemical pneumonitis which can be fatal. Can cause corrosive action to mucous membranes and digestive tracts.

### Inhalation health risks and symptoms of exposure:

Can cause nausea and respiratory irritation, dizziness, weakness, fatigue, nausea, headache, and possible unconsciousness. Burning sensation to mucous membranes, shortness of breath and flu like symptoms may occur.

### Health hazards (acute and chronic):

Can cause sensitization by exposure through contact or high concentrations of vapor. Over-exposure to this material can cause cardiac abnormalities. Overexposure can possibly cause anemia. Liver abnormalities, kidney damage or eye damage. May cause asthma or other respiratory disorders, bronchitis, emphysema, hyperactivity and eczema.

Chronic inhalation: as a result of previous repeated overexposures or a single large dose, certain individuals will develop isocyanate sensitization (chemical asthma), which will cause them to react to a later exposure to isocyanate at levels well below the tlv or mgl. These symptoms, which include chest tightness, wheezing, cough, shortness of breath or asthma attack, could be immediate or delayed up to several hours after exposure. Similar to many nonspecific asthmatic responses, there are reports that once sensitized an individual can experience these symptoms upon exposure to dust, cold air, or other irritants. This increased lung sensitivity can persist for weeks and in several years. Chronic overexposure to isocyanates has been reported to cause lung damage, including decrease in lung function, which may be permanent. Sensitization may either be temporary or permanent.

Acute skin contact: isocyanates react with the skin protein and moisture and can cause irritation. Symptoms of skin irritation may be reddening, swelling, rash, scaling, or blistering. Some persons may develop skin sensitization from skin contact. Cured material is difficult to remove.

Chronic skin contact: prolonged contact with the isocyanate can cause reddening, swelling, rash, scaling, or blistering. In those who have developed a skin sensitization, these symptoms can develop as a result of contact with very small amounts of liquid material or even as a result of vapor-only exposure.

## Medical conditions generally aggravated by exposure:

Respiratory conditions or other allergic response.

Carcinogenicity

Osha: no ntp: no iarc: yes

EYES:

Flush eyes with water for at least fifteen minutes and consult a physician.

SKIN:

For extreme exposure use a safety shower immediately. Wash affected area with soap and water and remove contaminated clothing promptly.

INGESTION:

Do not induce vomiting. Keep person warm and consult a physician immediately. Give 1-2 cups or milk or water to drink.

INHALATION:

Remove victim to fresh air area and administer oxygen if necessary. Obtain medical assistance, asthmatic type symptoms may occur immediately or be delayed for several hours. Treatment is symptomatic.

### SECTION 5: FIRE FIGHTING MEASURES

Flammable limits in air, upper: not available  
(% by volume) lower: not available

Flash point: 91f

Method used:

Seta flash

Extinguishing media:

Foam, alcohol foam, co2, dry chemical

Special fire fighting procedures:

Do not enter confined fire area without full bunker gear including a positive pressure niosh approved self-contained breathing apparatus. Presence of solvents in product may require grounding. Remove all sources of ignition.

Unusual fire and explosion hazards:

If fire occurs, solvents may produce excessive pressure. Sealed drums may rupture and ignite. Vapors are heavier than air and may travel along the ground and ignite by any source of ignition. During a fire, hdi vapors and other toxic gasses may be evolved. Containers may burst if contaminated with water. Vapor flashback to source is possible.

### SECTION 6: RELEASE MEASURS

Steps to be taken in case material is released or spilled:

Wear respirator and protective clothing. Remove all sources of ignitions. Remove excess with spark proof equipment, and the remainder with an absorbent such as clay and place in disposal containers. Contained air respirator may be necessary.

### SECTION 7: HANDLING AND STORAGE

Precautions to be taken in handling and storage:

Store in cool dry place, seal all partially used containers. Wash with soap and water before eating, drinking, smoking, or using the toilet facilities. Mixed materials contain the hazards of all the components, therefore, read the msds' s of all the components prior to using material. Properly label all containers. Keep material away from all sources of ignition.

Other precautions:

Avoid all skin contact. Avoid breathing vapors generated from the material. Observe conditions of good general hygiene and safe working practices. Contaminated leather articles cannot be cleaned and must be discarded if contaminated with this product. Wash all contaminated clothing prior to the reuse thereof. Wear appropriate safety equipment and respirator at all times when ventilation is not sufficient to control vapors. Observe osha regulations for respirator use (29 cfr 1910.134). When spraying material avoid exposure to all mists generated by using air supplied respirator.

## **SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION**

Respiratory protection:

Use a niosh approved respirator as required to prevent over-exposure to vapor in accordance with 29 cfr 1910.134. Engineering or administrative measures should be taken to reduce the risk and exposure. Use a positive pressure supplied air respirator when exceeding tlv' s or if hdi monomer concentrations exceed acceptable limits or when spraying material.

Ventilation :

Exhaust ventilation sufficient to keep airborne concentrations of hdi below their tlv and mgl maximum. Refer to patty' s industrial hygiene and toxicology- volume 1 (3<sup>rd</sup> edition) chapter 17 and volume iii (1<sup>st</sup> edition) chapter 3 for details.

Protective gloves:

Impervious gloves – neoprene or rubber.

Eye protection:

Splash goggles or glasses with side shields. Do not wear contact lenses when using this product.

Other protective clothing or equipment:

Wear body covering clothing and other coverings as necessary such as an apron and appropriate footwear to avoid contact.

Work hygienic practices:

Observe good general hygienic practices.

See section three for occupational exposure limit values.

COMPONENT n-Butyl Acetate: Acute oral LD50 > 5000 mg/kg (rat), Acute Inhalation Toxicity: LC50 > 23.4 mg/l, 4h (rat), Acute Dermal Toxicity LD50 > 5000 mg/kg (rabbit), Skin Irritation Guinea pig Acute Dermal Irritation exposure time 24h – Non-irritating, Skin Irritation Human patch test exposure time 48h – Non-irritating, Eye Irritation rabbit Draize exposure time 24h – slightly irritating, Sensitization dermal – non-sensitizing (guinea pig, human – maximization test). Repeated Dose Toxicity – 13 weeks inhalation NOAEL: 500 ppm (rat). Mutagenicity Genetic Toxicity in Vitro: Ames negative (Salmonella typhimurium, Metabolic Activation: with/without.

COMPONENT Xylene: Inhalation LC50 26800ppm, Skin LD50 2000 mg/kg, Ingestion LD50 4.3 g/kg. Exposure may effect skin, eye, liver, kidney, nervous system, respiratory system and lungs. High concentrations may lead to nervous system effects. Repeated overexposure has produced toxic effects in developing and young laboratory animals. Aspiration into lungs when swallowed or vomited may cause chemical pneumonitis which can be fatal. Xylene may contain ethyl benzene.. Ethyl benzene has shown limited evidence of a carcinogenic effect.

COMPONENT Ethyl Benzene: Acute Oral toxicity LD50: ca. 3500 mg/kg (rat); Acute inhalation LC50: 17.2 mg/l 4h (rat); Acute Dermal Toxicity: 17,800 mg/kg (rabbit); Skin Irritation rabbit Draize exposure time 24h – slightly irritating. Eye Irritation rabbit Draize – severely irritating. Sensitization dermal (human patch test) non-sensitizer. Repeated Dose toxicity 28 days inhalation NOAEL: 3.4 mg/l (rabbit). Mutagenicity Genetic Toxicity in Vitro: Ames: Negative (salmonella typhimurium, metabolic activation with/without).

Carcinogenicity: Ethyl benzene was tested by inhalation exposure in mice and rats. In mice, there was an increased incidence of lung adenomas in males and liver adenomas in females. In male rats, there was an increased incidence of renal tubule adenomas and carcinomas. Two Studies of workers potentially exposed to ethyl benzene in a production plant and a styrene polymerization plant, showed no excess cancer incidence and no excess cancer mortality during a 15 year follow-up. Toxicity to Reproduction/Fertility: Inhalation (monkey, male) Reproductive effects have been observed in animal studies, In a generation study, inhalation (rat/female) NOAEL (parental): 100ppm NOAEL (F2): 100ppm. Developmental Toxicity/Teratogenicity rat, female, inhalation, gestation, daily, NOAEL (teratogenicity): 100ppm (maternal): 100ppm. Teratogenic effects seen only with maternal toxicity., Fetotoxicity seen only with maternal toxicity. Rabbit, female, inhalation, gestation, daily, NOAEL (teratogenicity) < 1000 mg/m<sup>3</sup>, NOAEL (maternal) < 1000 mg/m<sup>3</sup>.
