Webinar housekeeping

- Please ask questions – use the Q&A button
- We will answer questions at the end
- If there are any we don't get to we will send replies after the webinar
- We will be sharing the recording of the webinar
- A copy of the slides will be available (in English and Welsh)

About WRAP

- WRAP (the Waste and Resources Action Programme) is a climate action NGO working around the globe to tackle the causes of the climate crisis and give the planet a sustainable future. We were established in the UK in 2000; we now work in 40+ countries.
 - Working around the globe with governments, businesses, and citizens, our mission is to make the world a more sustainable place. We bring people together, we act on the facts, and we drive change.
 - We are working with Welsh Government to provide support to implement the new Workplace Recycling law.
-

New Regulations - 6th April 2024*

- All workplaces such as businesses, public sector and charities will need to **separate their recyclable materials** in the same way most households already do.
- **Bans on the disposal of all food waste to sewer** from non-domestic premises.
- **Bans** on specified **separate recyclable** waste streams going to **incineration plants and landfills**.

Applies to all waste and recycling collectors and processors who manage **household-like waste** from workplaces.

**Hospitals (NHS and private) have an additional two years to comply with the separation requirements. The ban on food waste to sewer applies from 6th April 2024.*

Household-like waste

- Waste materials like those found in households
- Commonly collected by local authorities from households
- Also includes unsold small waste electricals and unsold textiles

Does not include:

- Construction waste
- Industrial waste
- Agricultural waste

Except for commonly recycled waste materials like those found in households.

Why?

- Wales is already really good at household recycling, currently 1st among the UK nations for household recycling – 65%.
- 3rd best nation in the world for household recycling.
- The aim is to ensure high recycling rates across all sectors, not only households.
- Over 70% of materials in the commercial waste stream could be recycled.

Why?

Recycling reduces carbon emissions

- 45% of carbon emissions are due to products we purchase
- 90% of biodiversity loss and water stress comes from resource extraction

Increasing recycling also:

- increases the amount and quality of recycled materials that can then be used by Welsh manufacturers and reduce the use of virgin materials;
 - supports workplaces to minimise waste and potentially save money;
 - helps the economy to create a greener Wales.
-

Why?

This will enable a consistent recycling system wherever anyone works, rests or plays.

WHO?

- Including:
- agricultural premises;
 - bars and public houses;
 - bed and breakfasts, hotels;
 - bus stations, railway stations, seaports, airports, heliports;
 - campsites and caravan parks (but not individual caravans);
 - care homes, residential care homes and nursing homes;
 - cinemas;
 - community centres and village halls;
 - construction sites;
 - educational establishments such as universities, colleges and schools;
 - entertainment and sports venues, including leisure centres;
 - factories;
 - film and television production sets;
 - garages for vehicle servicing and repair;
 - garden centres;
 - heritage buildings;
 - holiday parks and resorts;
 - hospitals;
 - libraries and museums;
 - offices;
 - outdoor markets
 - pharmacies, doctors' surgeries, dental surgeries, optometrists, opticians, podiatrists and other primary care facilities;
 - places of worship;
 - prisons;
 - restaurants and cafes;
 - service stations and petrol stations;
 - shops and shopping centres;
 - showgrounds;
 - sports grounds and stadia;
 - take aways & mobile food vendors;
 - theatres and arts venues;
 - venues for temporary events such as festivals and shows, including outdoors events;
 - warehouses; and
 - workshops.

If you mainly have an on-line presence, you will still need to comply with the changes on any premises that you use.

The new laws have three parts

1. The separation requirements
2. Incineration and landfill bans
3. A ban on the disposal of food waste to sewer

1. The separation requirements

The following materials will need to be collected separately:

- Paper and card
- Glass
- Metal, plastic, and cartons (and other similar packaging, for example coffee cups)
- Food – only for premises that produce more than 5kg of food waste a week
- Unsold small waste electrical and electronic equipment (sWEEE)
- Unsold textiles

Materials to be kept separate at point of presentation to waste collector
Separately collected recyclable materials to be kept separate and not mixed

2. Incineration and landfill bans

Incineration (separately collected materials)

- Paper and card
- Metals
- Plastic
- Glass
- Cartons
- Food
- All sWEEE
- Unsold textiles

Landfill (separately collected materials)

- Paper and card
- Metals
- Plastic
- Glass
- Cartons
- Food
- All sWEEE (includes unsold)
- All textiles (includes unsold)

Ban all wood waste from non-domestic and domestic premises to landfill

3. A ban on the disposal of food waste to sewer

- A ban on disposal of all food waste to sewer including via macerators, de-waterers or Enzyme treatment.
- This will divert waste food from disposal to Anaerobic Digestion (AD) and generate renewable energy.
- Food waste to be collected separately at source from all workplaces producing 5kg per week or more.

Enforcement of the new laws

- Natural Resources Wales (NRW) is responsible for making sure that materials are being separated and collected correctly, and that the ban on recycling going to incineration and landfill is being followed.
 - Local Authorities are responsible for making sure the ban on food waste going to sewer is followed.
 - If you do not comply with the law, it could mean a fine for your workplace.
 - Occupiers of premises are responsible and liable for the actions of their staff.
-

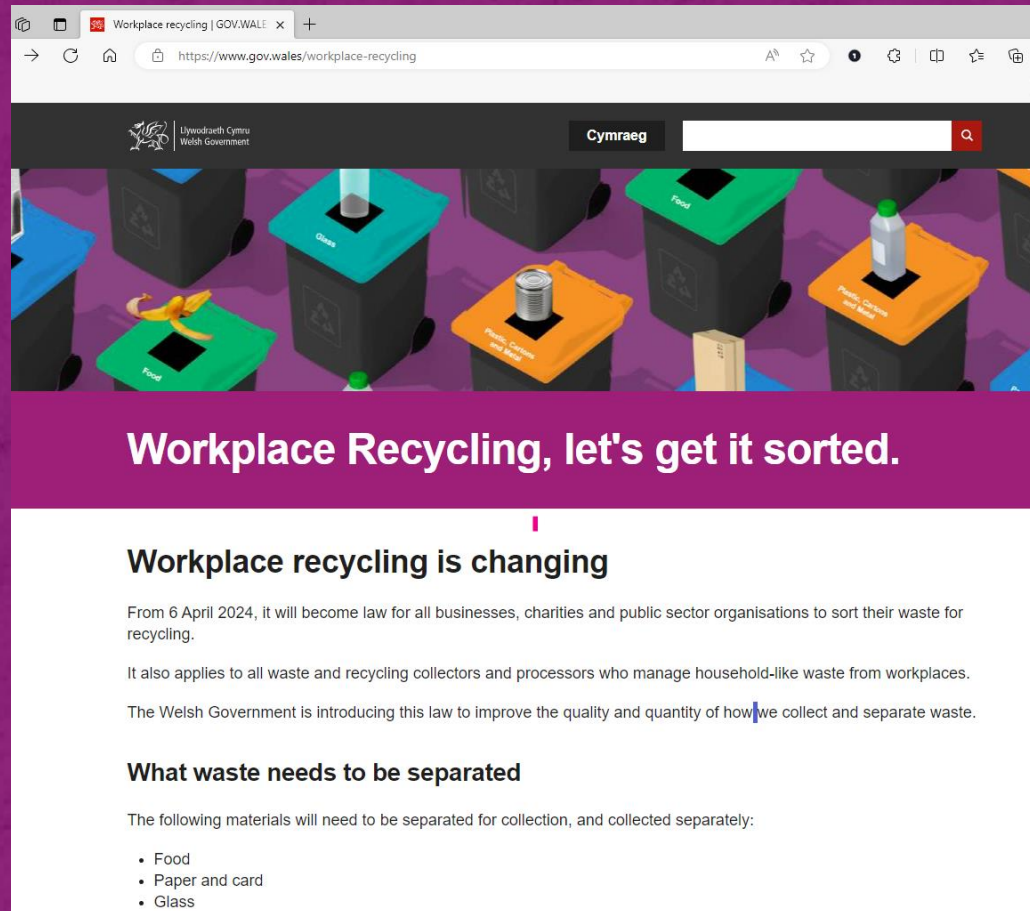

How to Get Ready

Read the Code of Practice – it contains all the detail about how to comply with the regulations

[Separate Collection of Waste Materials for Recycling: A Code of Practice for Wales | GOV.WALES](https://gov.wales/government/department/department-for-waste-and-circular-economy)

Information available

Workplace recycling | GOV.WALES

https://www.gov.wales/workplace-recycling

Llywodraeth Cymru
Welsh Government

Cymraeg

Workplace Recycling, let's get it sorted.

Workplace recycling is changing

From 6 April 2024, it will become law for all businesses, charities and public sector organisations to sort their waste for recycling.

It also applies to all waste and recycling collectors and processors who manage household-like waste from workplaces.

The Welsh Government is introducing this law to improve the quality and quantity of how we collect and separate waste.

What waste needs to be separated

The following materials will need to be separated for collection, and collected separately:

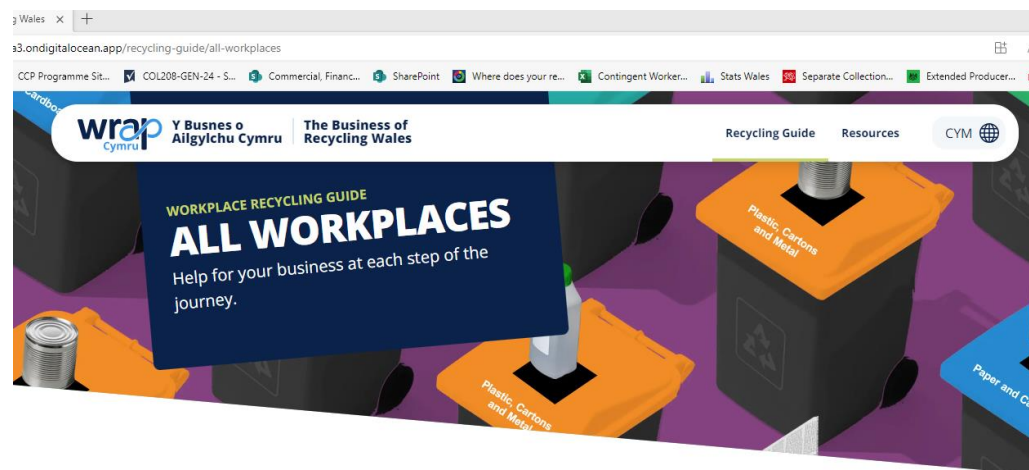

- Food
- Paper and card
- Glass

- Welsh Government webpage
- General guidance on the changes
- Code of Practice
- [Workplace recycling | GOV.WALES](https://www.gov.wales/workplace-recycling)
- gov.wales/workplacerecycling

New 'Business of Recycling Wales' website

Guidance for all workplaces

The new recycling law applies to all workplaces in Wales.

This is a summary of the changes and offers tips on how you can get ready.

The law comes into effect on **6 April 2024**. It means all workplaces such as businesses, public sector and charities will need to separate their recyclable materials in the same way most households already do.

It also applies to all waste and recycling collectors and processors who manage household-like waste from workplaces.

- [How the law will be enforced](#)
- [How to get ready](#)
- [Further support and guidance](#)

businessofrecycling.wrap.org.uk

How to Get Ready

Understand your waste and recycling

Carry out a waste audit to identify what wastes are currently produced and recycling is already happening

Areas within a workplace most likely to generate waste include:

- Kitchens, on-site cafés, and food stalls:
 - Food preparation areas - food (spoilage and preparation waste), packaging such as metal, glass, cardboard, plastic films and wrapping.
 - Food consumption areas - food (plate waste), packaging waste such as drinks cans, plastic and glass bottles, drinks cartons, cardboard, and paper;
- Staff room/mess room/office - paper, food, and packaging materials;
- Public areas such as concourses – uneaten food, packaging waste such as drinks cans, plastic and glass bottles, drinks cartons, cardboard, and paper;

Consider peak times when waste may increase ie Christmas or locations linked to tourism.

Waste prevention

Preventing how much waste you produce will help to save money

- Donate surplus or unsold stock
- Purchase recycled, refillable or reusable products wherever possible;
- Provide water fountains for staff to use and avoid single use disposable alternatives;
- Ask your suppliers to use returnable transit packaging that they collect from you when they next deliver and
- Consider ways of going paperless
- For take-away drinks encourage customers to bring their own reusable cup by charging for single use cups and
- Ensure that packaging on your takeaway food and drink is minimised and that what packaging is used, can be recycled or reused.

Separate collections

Setting up a compliant recycling scheme

The responsibility to be compliant will fall on the business owner.

Consider the following:

- What is the amount or type of waste you regularly produce?
- Whether having recycling collections on certain days of the week will help reduce build up wastes
- Maybe little and often works better for you.
- If you don't have much space for external containers, could you share bins with other businesses to help reduce costs and space required?
- Speak to your existing waste collector about your new recycling needs.
- Get quotes from a range of collectors to get the best price and the most suitable service for you.

Bins

where and how you will store your waste and recycling.

Consider the following:

- are safe and accessible for people, including users with disabilities, and your waste collector;
- are not in locations that cause an obstruction, a fire hazard or block escape routes;
- provide sufficient capacity;
- are close to where the waste and recycling is generated;
- are tidy, clean, and free from clutter or loose waste and
- are secure and do not allow waste or recycling to escape.

Workplaces that produce and handle food waste

The law to separate and recycle food waste applies to any premises that produce over 5kg of food waste per week, such as:

- Hotels
 - Restaurants
 - Cafés
 - Takeaways
 - Catering businesses (including those at events such as food stalls and events)
 - Shopping centre food courts
 - Sports stadiums
 - Canteens
 - Pubs
 - Offices with canteens, cafes or staff kitchen facilities
 - Schools, colleges, prisons, nursing homes and hospitals and
 - Any other workplaces that serve food.
-

Food waste & hygiene

The [Food Standards Agency \(www.food.gov.uk\)](http://www.food.gov.uk) provides guidance which means you need to:

- store food waste in sealable containers which are;
 - solid, and strong enough to hold food waste;
 - in sound condition – i.e., without breakages or splits that could enable pests to access waste or cause leaks and
 - easy to clean and disinfect;
- remove food waste and other rubbish from areas as soon as possible and
- have enough waste storage facilities to store and dispose of food waste and other rubbish to keep them clean.

WRAP support for food waste reduction

WRAP provides support for food businesses to reduce food waste via:

- [The Guardians of Grub](https://guardiansofgrub.com) campaign supports Hospitality and Food Service businesses to reduce the alarming amount of food wasted every single year.
guardiansofgrub.com
- [WRAP Food Waste Reduction Roadmap Toolkit](https://wrap.org.uk/resources/tool/food-waste-reduction-roadmap-toolkit) is an industry wide roadmap and toolkit that helps food businesses take targeted action to reduce waste in their own operations, their supply chain and from consumers.
wrap.org.uk/resources/tool/food-waste-reduction-roadmap-toolkit

Can you reduce the number used?

- Reusable cups (e.g. ceramic) for customers drinking in
- For take-away, encourage customers to bring their own reusable cup by charging for single use cups

Speak to your waste collector about how to collect disposable cups

- Under the new laws, many cups can be collected with metals and plastics BUT only if your waste collector accepts them this way. Some collectors may require them to be separated

NB This does not include cups with a compostable or biodegradable plastic lining.

Single use cups

Staff training

- Ask for ideas on how a scheme may work
- Provide clear instructions on what they should do
- Provide training to permanent, seasonal and temporary workers
- Share information about recycling via regular communications
- Ask for feedback.
