Female hair removal.

In 1988, Braun acquired the French company Silk-épil and launched its epilator business, today one of the company's core and growth segments. Developments here focused on enhanced efficiency with optimized rollers and a greater number of tweezers, and also on improving comfort with flexible heads and massage elements.

The epilator is Braun's most "feminine" product. The products are characterized by soft, organic forms with user elements often in accent colors, emphasizing their cosmetic aspects, while at the same time conveying value and technical expertise.

Hair care.

Hair dryers have long been closely associated with the Braun brand. As early as the 1960s, Braun pioneered relevant technology, and 1978, with the PGC 1000 (1), it succeeded in creating a new innovative model: a compact and efficient hair dryer with an angled grip that was suitable for traveling. The hair care division has always maintained close links with the latest trends in hair styling. Accordingly, it has created hair straighteners, curlers, and hair dryer attachments to achieve smoother hair, create greater volume, or form curls. One of the latest hair care innovations is the Satin Hair Brush featuring static-reducing ion technology (2).

Oral Care.

1,651,043,566 replacement brushes were produced by June 30, 2011, Braun and Oral-B

Electric oral care

Braun launched its first oral care product in 1963 with the mayadent (1) electric toothbrush, and from the late 70's steadily expanded the business. The extraordinary commercial success of the division began with the introduction of the D5 Plak Control in 1991 (2). The rotating and oscillating movement of the small round brush head was a revolution, replacing older systems, which still simulated the motions of a manual brush. In terms of engineering, the brush head posed a huge challenge, with early prototypes lasting only a few minutes. It took one year to find a solution to this problem, and suitable materials that would stand up to the aggressive chemistry and the abrasive textures of many toothpastes. Today, both electric toothbrushes and manual toothbrushes are sold under the Oral-B brand name.

Manual toothbrushes

The cooperation between Braun and Oral-B began at the end of the 1980s when the Oral-B Plus manual toothbrush (3) was redesigned by the Braun Design department. The Oral-B Plus is still produced today in a virtually unchanged design, and posts sales of well over one billion units. Almost all Oral-B manual toothbrushes were subsequently designed by Braun. Since 2000, technical development has also been based in Kronberg, Germany.

Household (Home Small Appliances) with De'Longhi SpA.

Procter & Gamble takeover Gillette in 2005 makes Braun one of twenty-four global brands of the largest consumer-product group in the world. P&G transfers the rights to the Braun brand in the area household appliances to De'Longhi S.p.A. in 2012. Along with the corresponding patents and production facilities, De'Longhi acquires a large part of Braun's employees, thereby ensuring that Braun household appliances will continue to offer distinctive design, technological innovation and reliable quality far into the future.

Clocks and watches with Zeon Ltd.

Zeon is the licensed manufacturer and distributor of Braun watches and clocks. Founded in London in 1979, Zeon offers expertise in innovative design, manufacturing and distribution worldwide. The company is one of the largest watch manufacturers and distributors in the UK and a major force in the international market. Zeon's team of in-house design and production experts ensure that each watch and clock embodies Braun's ethos of highly functional, clean design. Braun Time is designed in line with the Braun aesthetic and products in the range win a number of design awards each year.

Health & Wellness
with KAZ Inc.

In 2006, Kaz acquired Braun's thermometer and blood pressure monitoring business to become the worldwide thermometer leader. Braun Health & Wellness products help you quickly and conveniently monitor your health, and that of your family. They are designed to deliver precise, reliable results you can fully trust. The Thermoscan Ear Thermometer is manufactured by Kaz USA, Inc. under a license to the Braun trademark.

Cigarette lighters & pocket flashlights.

In addition to pocket flashlights, the most celebrated of which is undoubtedly the 40-year-old manulux flashlight (1) developed by Max Braun, a range of table, stick, and pocket lighters were also developed. The first innovative product in the range was the TFG 1 permanent table lighter (2) in 1966, its electromagnetic igniter having no parts susceptible to wear and tear. In 1971, Braun introduced its first pocket lighter (3), and acquired Köllisch AG in Nuremberg, the manufacturer of Consul lighters. The lighters were characterized by their clarity of design and their formal reduction to geometric base bodies, making them look anything but trivial. This was helped by the choice of material, surface structures, and, most of all, the details of the form. At the start of the 1980s, Braun discontinued production of lighters.

Photo & film technology.

With the development of the handy Hobby Standard electronic flash (1) in the early 1950s, Braun established its highly successful film and photo division. As well as flash units, the product range included film cameras, film and slide projectors, and cameras. In 1963, Braun acquired the Munich based company Niezoldi & Krämer, a manufacturer of high-quality, narrow-gauge film cameras. The Nizo S 8 (2) became the prototype a of the classic modern narrow-gauge film camera. Its basic design remained unchanged right up to the final model, the integral (1981) (3). In 1981, the film and photographic division was sold to Robert Bosch GmbH.

Infrared ear thermometers & blood pressure monitors.

In 1996, Braun acquired the U.S. company ThermoScan, the leading manufacturer of infrared thermometers. This was the start of the personal diagnostic appliances product group. Today, infrared ear thermometers and blood pressure meters are licensed products marketed under the Braun brand name.

Entertainment
electronics.

This product group initially included radio and audio equipment, then later hi-fi equipment, loudspeakers, and TVs. With the SK 4 in 1956 (1), Braun ushered in a revolution in radio design, signaling an end to the previous bulky, furniture-style equipment. Some of the innovative product design principles that would influence future styles included the geometric basic form, and the purist arrangement principles, as well as the system and module concept of later hi-fi equipment. As early as the 1960s, Braun had established itself as a leading brand for entertainment electronics. Thanks to their superior technology and design, Braun audio and hi-fi equipment were among the most sought-after products in this market segment. The price for the studio 1000 system (2) at the time was equivalent to the value of a mid-range automobile. The further development of Braun's product design illustrates how Braun has remained faithful to its functional and esthetically reduced design principles, while at the same time producing modern and futuristic designs. Even thirty years later, the atelier system (3) still looks extremely modern. In 1990, after almost six decades, Braun exited this product segment with its "Last Edition" model.

Clocks and watches & pocket calculators.

The clock product line began in 1971 with the phase 1 tabletop alarm clock (1), and later expanded to include alarm clocks, wall clocks, and wristwatches. In 1976, the first pocket calculator, the ET 33 (2), was launched; to this day, it is regarded as a particularly successful product in terms of ergonomics and design. Its convex buttons were a world first. The design of the successor device, the ET 44 (3), inspired Apple 30 years later when it was developing the iPhone. Nowadays, clocks and alarm clocks are licensed products, and are being relaunched with new designs.

Household appliances.

beating, mixing, grinding, chopping, extracting, toasting, kneading, blending, brewing, boiling, warming, slicing, shredding, grating, ironing ... done!

Braun launched its line of household appliances in 1950 with the Multimix kitchen blender (1), constructed by company founder Max Braun himself. Over the next few decades, the business expanded to include a full range of household appliances such as blenders, coffee machines, irons, juicers, hand blenders, and handheld mixers. From the start, the main focus was on small kitchen appliances. Even today, the KM 3/31 kitchen blender (2) (1957), which was manufactured in a virtually unchanged design until 1993, and was one of the most durable industrial products ever, and the Aromaster KF 40 coffee machine (3), a bestseller from the 1980s, are considered archetypes of their product categories. Over time, the importance of household appliances has shifted from being simply kitchen aids for the housewife to becoming lifestyle products. The core business today includes hand blenders, which allow food to be prepared in small quantities, and also juicers and coffee machines, because they satisfy the need for enjoyable, healthy food.

Kitchen machines, blenders and juicers.
