

Press Release

HAYVN partners with nCipher to deliver bank-grade security for new digital currency platform

- ***nCipher Security's Cindy Provin to join HAYVN Advisory Board***

Abu Dhabi, London: 22 July 2019. HAYVN, the global digital currencies platform, is pleased to announce that it is partnering with nCipherSecurity, an Entrust Datacard company and market-leading general purpose hardware security module (HSM) business, to deliver bank-grade security for clients using its platform. Entrust Datacard SVP and nCipher Security General Manager Cindy Provin has also joined the Advisory Board of HAYVN.

HAYVN offers clients an innovative, secure and transparent digital currency trading and custody platform that allows institutional investors to buy, sell and hold digital currencies. As a custodian of digital currency, HAYVN has partnered with nCipher to bring its experience in securing some of the world's leading financial services companies to the digital currency space. HAYVN is working with the nCipher team to implement nCipher Security nShield HSMs across its multi signature wallet solution to deliver the highest quality secure key management. nCipher nShield HSM's deliver bank grade security and compliance, with scalable transaction capabilities, demonstrating HAYVN's commitment to protecting investors.

Regarding the partnership with nCipher, Christopher Flinos, HAYVN Co-Founder, said:

"We are delighted to partner with an industry player as renowned as nCipher. Our collaboration clearly demonstrates HAYVN's commitment to total platform security, transparency and secure custody. We believe the crypto industry has incredible potential but that won't be met until the asset class grows up and attracts institutional interest. Security and custody are the missing ingredients to making that happen and nCipher will help us to provide an industry-transforming proposition. Cindy Provin has a proven, 20-year track record of leading and growing data security organizations. Her presence on our advisory Board will strengthen HAYVN as we launch the business and roll out our service offering to clients."

"Security is the essence of HAYVN. Our clients are trusting us to hold and keep their financial assets safe. The security of the HAYVN ecosystem must therefore be second to none. While every part of the system has been designed and built specifically for the security demands of institutional investors, the way we secure our digital currency is the most critical and nCipher is playing an essential role in ensuring our technology delivers this."

Commenting on the partnership and her appointment to the HAYVN Advisory Board, Cindy Provin said:

“I am extremely honored and excited to join the HAYVN Advisory Board at this exciting time for the company and the wider digital currency industry. This market has seen incredible ups and downs over the last 18 months. Now it is time for it to realise its full potential. I believe HAYVN partnering with nCipher can help to achieve this aim, drawing in much-needed institutional interest by offering a secure, safe and simple way to access digital currencies, backed up with bank-level security and custody.”

About HAYVN:

HAYVN is the new global standard in institutional digital currency platforms. Our platform provides secure OTC trading, custody, and research capabilities, enabling customers to trade digital currencies simply, safely and efficiently. Breaking through the complexity of digital currency trading and custody, HAYVN provides unprecedented levels of transparency, security, compliance and best execution practices, bringing unique trading opportunities to our clients and the markets in which we operate. HAYVN has in-principle approval to operate a digital currencies platform in Abu Dhabi Global Market and aims to carry out specific regulated activities as soon as it receives the final regulatory approval.

About nCipher Security:

nCipher Security, an Entrust Datacard company, is a leader in the general-purpose hardware security module (HSM) market, empowering world-leading organizations by delivering trust, integrity and control to their business critical information and applications. Today's fast-moving digital environment enhances customer satisfaction, gives competitive advantage and improves operational efficiency – it also multiplies the security risks. Our cryptographic solutions secure emerging technologies such as cloud, IoT, blockchain, and digital payments and help meet new compliance mandates. We do this using our same proven technology that global organizations depend on today to protect against threats to their sensitive data, network communications and enterprise infrastructure. We deliver trust for your business critical applications, ensure the integrity of your data and put you in complete control – today, tomorrow, always. www.ncipher.com
