Trojan Battery Introduces Single-Point Watering System For Its Flooded Batteries

SANTA FE SPRINGS, Calif., March 20, 2013 -- Trojan Battery Co., the world's leading manufacturer of deep-cycle batteries, has launched a [single-point battery watering system](#) for its line of flooded batteries for renewable energy and backup power applications. The new watering system makes maintenance of Trojan's deep-cycle flooded batteries faster, easier and safer.

Trojan's single-point watering kit is designed to take the guess work and mess out of properly watering flooded batteries. The flexible tube routing allows the watering system to work with various battery bank sizes and configurations. It also features an automatic valve shut-off to control the electrolyte level within each cell which prevents overwatering. In addition, the kit enables users to fill their deep-cycle batteries without having to remove the vent covers, an important safety feature which reduces the chance for contact with the battery's electrolyte.

"Proper maintenance and periodic watering are important factors in maximizing the performance and life of Trojan deep-cycle, flooded batteries," said Bryan Godber, senior vice president for renewable energy at Trojan Battery. "With Trojan's new single-point watering kit, precise battery watering is made easy and can fill a set of batteries in 30 seconds, saving valuable time and money."

The single-point watering kit comes in three configurations to fit 12V, 24V and 48V battery models. The kits are designed for single string installations with Trojan Premium, Industrial and Signature lines of flooded batteries. For systems with multiple strings in parallel, additional kits can be added at the required system voltage.

About Trojan Battery Company

Trojan Battery Company is the world's leading manufacturer of deep-cycle batteries, offering a complete portfolio of technologically-advanced deep-cycle flooded, AGM and gel batteries that provide maximum
