Dear Daniel

RE: WESTLINK INDUSTRIAL DEVELOPMENT STAGE 1, KEMPS CREEK - NORTHERN BOUNDARY
RETAINING WALL

Further to recent discussion we understand ESR are submitting a modification (Mod) to the Westlink Stage 1 State Signification Development Application RTS-SSD-9138102. This mod results from reducing the height of the proposed cut retaining wall along the northern boundary of the Estate.

Revised retaining wall heights submitted as part of the mod are indicated on *Retaining Wall Elevation – Lot 1 Sheet 2 C013807.03-DA 141* prepared by Costin Roe Consulting and Douglas Partners 28th July 2023.

AT&L have been engaged by ESR to provide Civil and Stormwater Engineering services for the Westlink Development. We can confirm the reduced height of the northern boundary retaining wall and revised wall design will not have any adverse impact on existing stormwater drainage catchments within and surrounding the Westlink Estate.

I can confirm I am a suitably qualified Chartered Civil Engineer. Refer below for qualifications.

Should you have any questions, please don't hesitate to contact the undersigned.

Yours sincerely

Andrew Tweedie
