

EFPIA Patient Organization Methodological Note Pharmaserve-Lilly SACI

Patient organizations are a key driving force in allowing the pharma industry to become more patient centric; they provide valuable insight into the development and improvement of innovative treatments and practices.

Relationships between pharma companies and patient organizations are regulated through the EFPIA Code and national industry codes to enforce public disclosure of any collaboration. It is integral to follow these guidelines to meet and maintain high standards of transparency and integrity between the pharma industry and patient organizations across Europe.

This Methodological Note is intended to serve as supporting documentation for the Lilly patient organization report published annually. It underlines the rationale for interactions between Lilly and patient organizations and describes the methods applied to meet the reporting requirements outlined in the EFPIA Disclosure Code and local transparency guidelines where applicable.

Patient Organizations are described as a non-for-profit legal person/entity (including the umbrella organization to which it belongs), mainly composed of patients and/or caregivers, that represents and/or supports the needs of patients and/or caregivers and which business address, place of incorporation or primary place of operation is in Greece.

The patient organization report for each country will outline:

- The type of support Lilly are providing to the patient organization i.e. – financial, indirect, or significant non-financial support
- The nature of funding or project description for every transaction
- The transaction amount in local currency if there is a monetary value attached

Report Regeneration

Regarding report corrections, once reports have been published, data corrections may require updates to reports that are publicly available. Once revisions have been made, the publicly available reports may need to be updated to reflect the changes.

Published Date: The publication date equals the date the report is generated via internal systems.

This data will remain published for 5 years in the public domain.
