

See the future of surveillance and security, today

Smart Surveillance

Improve protection for your property and staff while helping to minimize false-positive alarms, improve reliability and save money

Infrastructure, construction and general work sites are routinely subjected to intrusion, theft and trespassing. Location, project size and budgetary constraints may also mean some sites can't be practically or cost-effectively secured by on-site personnel. This leaves valuable assets vulnerable to theft or vandalism. What's more, large and remote locations can be difficult for site supervisors to effectively monitor for health and safety compliance—leading to greater risk of injury, fines and loss of work.

Stay on top of your monitoring needs with our state-of-the-art live monitoring and reporting system that includes end-to-end solutions for your security and compliance requirements. Reduce and deter risk in real time with remote monitoring and live communication system. Simple to install and activate, smart surveillance features advanced analytics and artificial intelligence to secure your people and assets.

Key Benefits

Property

Protect your property with smart surveillance solution coupled with AI-capable analytics

Theft

Deter theft, intrusion and vandalism in near real time with sensor-enabled surveillance and a live communications system to inform trespassers that authorities are en-route

Compliance

Improve your workplace health & safety compliance with live, remote video monitoring and reporting

Costs

Save on personnel, operational downtime, operational costs – including equipment replacement – and potentially reduce insurance premiums

Options

**Fully modular, adaptable units**

Completely autonomous units that come with an independent communications system onboard – no existing infrastructure or new wiring required

**Easy to build and deploy**

A simplified solution that can usually be deployed in a single day – a single unit can often be installed and activated in under 45 minutes

**Unique communication platform**

Patented compression technology provides exceptional image quality at exceptional speed over a secure network connection

**syncroDetect**

A system of wireless sensors that detect motion & intrusion attempts in vulnerable areas outside of camera view

**syncroPlates**

A license plate reading system that monitors vehicular traffic, helping to track the timely arrival of workers, trucks and material delivery

**syncroReport**

A dashboard of advanced analytics to continually monitor and manage all activity
