

Getting the Most Out of Your RPS

If you have an SSRN Research Paper Series you've already unleashed a secret weapon in showcasing your research.

Aggregating your organization's research creates more awareness, and allows each paper to get more exposure. Instead of being one paper out of hundreds of thousands in an eLibrary, your research will stand out as an individual title in a like-minded collection of research.

The RPS allows you to circulate all of your institution's papers in one concise location. It then disseminates those papers to targeted groups of readers. Your RPS comes with a dedicated eJournal. Interested parties are able to subscribe to this eJournal which means the more you share, the more your subscribers you have, the larger impact you have on the greater scholarly community.

By aggregating authors' papers within an organization's series, and the organization receives valuable exposure for the work being done by their researchers. Also, it ensures that authors get the full benefit of their affiliation, and allows their work a greater chance of being downloaded and cited. Your readers benefit from this as they are able to access more papers that coincide with their interests.

At SSRN, we are aware that researchers receive pressure for the need to measure the impact factor of their work. We help alleviate this pressure by providing PlumX analytics on each paper uploaded to SSRN. Not only can you see the downloads and views, but we'll help you get a more complete picture of the impact your research has after being uploaded to SSRN. By viewing this data you can rest assured that your institutional ranking are no mere vanity metric, and that your RPS really is going to work for you.

We recommend that you encourage subscriptions to your institutional eJournal by using the buttons provided in your toolkit. Authors should update papers on SSRN often by taking advantage of version grouping that helps track progress as you write your paper. Inclusions in SSRN's eLibrary means that your paper is subject to open review, which we hope will help you collaborate and improve your paper.

Your institutional RPS is here to put a spotlight on your research. We hope you take advantage of it and discover the benefits it holds for organizations and the researchers who make the work possible.
