# Tips for Publishing Impact

As a researcher, you want to learn techniques and strategies to set yourself up for publishing success. On our premium content channel, you can find useful resources to learn the best practices on preparing manuscripts for publication and discovering the best journal for your research.

Access Elsevier Researcher Academy - a free e-learning platform designed to unlock the potential of early and mid-career researchers.
https://researcheracademy.elsevier.com/

TIP 1

Always remember to cite the funding organisation in your research work.
e.g. National Health and Medical Research Council (NHMRC)

TIP 2

Always select the right journal to publish your research.
Use journal metrics to determine the right journal for your research. Journal Metrics are an important consideration for research impact.

Visit Scopus.com to review all journals (Sources) for Dementia & Diabetes.

Note the metrics: CiteScore, Citations, Documents, % Cites, SNIP and SJR
SNIP & SJR = 1
A score of 1 or above indicates that this journal meets the global average in terms of Source Normalised Impact (SNIP) and Reputation (SJR).

To access the Scopus Source List - click here

TIP 3

Always get expert guidance and resources to help you advance your research and authorship. Use our services and products to inspire your work, help find collaborators, improve grant proposals, get published, promote your research, track your influence and more.

Visit Resources for researchers on https://www.elsevier.com/researcher to find more information about:

- Expand your research career network and find collaborators
- Prepare your research proposal and secure funding
- Accelerate your research productivity and discover more
- Get support as you write your research
- Get published and maximize your impact through a top-quality publication
- Share your work and track your research influence
