

Contrast 2019.1 release note

[1. Introduction](#)

[2. Changes](#)

[2.1. Support for new web-PDF specifications](#)

[2.2. Support for new print-PDF specifications](#)

[3. Summary of changes with respect to previous Contrast version](#)

1. Introduction

This document describes the changes to Contrast to be released in conjunction with an EW release.

The complete Contrast documentation will be updated to include the changes described below. With particular reference to Contrast-out, implementation of the new versions of the schemas by receiving systems does not necessarily entail implementation of every new thing in the schemas.

The following sections describe the changes and list the differences with respect to previous versions.

2. Changes

With this release the Contrast version names no longer match the EWII release names.

2.1. Support for new web-PDF specifications

The new web-PDF specifications (v7.0) are supported by the addition of a new value for element `web-pdf/pdf-version`: 1.7 7.0.

2.2. Support for new print-PDF specifications

The new print-PDF specifications (v2.0) are supported by the addition of a new element `print-pdf/pdf-version` with possible values 1.3 1.0 and 1.6 2.0.

3. Summary of changes with respect to previous Contrast version
