SciVal recent releases and roadmap

See what we have planned for SciVal for the next few months and beyond

SciVal is continually evolving, improving, and being updated to suit your changing needs. We want to keep you informed of exciting and innovative features and functions we recently launched or are developing. We continue to invest in the platform, adding new metrics, functionality, and data types to meet the analytics and reporting requirements of our customers.

See highlights of our recent releases and what's on the road for SciVal!

As with all roadmaps, below provides an outline of future plans and the features and timing may therefore change.

H2 2023

- Gain insights into the broader technological and economic impact of your research with patent citation data from 43 patent authorities in the Impact module.

- Gain a deeper understanding of the bibliometric datasets underlying your institutions ranking scores in 2024 QS and THE World University Rankings.

- Evaluate the research performance of Chinese scholars with access to the 2021 and 2022 lists of Highly Cited Chinese Researchers, generated using Scopus® data and a method developed by ShanghaiRanking Consultancy.

- Create and analyze larger entities immediately through an increased publication limit for dynamic entities.

- Understand your contribution towards the UN SDGs through SDGs as subject classification.

- Analyze the output and impact of academic collaboration with all other sectors in the Benchmarking module.

- Compare your collaborators by their overall rank in major university rankings in Collaboration module tables.

- Track how your Institution's collaborations have developed in specific fields over time with the yearly collaboration breakdown by subject area in the Collaboration module.

- Analyze an Institution's funding portfolio, overall or per Subject Area, through acknowledgement Linked publications by Funding Body in the Grants module.

H1 2024

- Build your views on global research with greater ease through enhanced navigation and improved workflows.

- Explore global research and the Topics you and your peers are active in with an updated and improved SciVal Topics methodology.

- Gain insights into the broader impact of research on society through Media Mentions as an indicator of contributing to public opinion.

- Benefit from even more flexibility with faster entity availability and flexible year ranges in more places in SciVal.

- Gain a deeper understanding of the bibliometric datasets underlying your institutions ranking scores in the US News 2024 US Best Colleges Rankings.

- Explore the collaboration profile of Groups of Researchers to support your local research strategies.

- More flexibility to analyze fields of interest with the ability to select multiple subject areas at once in the Benchmarking and Impact modules.

- Gain a greater understanding of the profile and contribution of each author to a publication with expanded authorship analyses.

- Explore funding landscapes more comprehensively and understand the profile of more entities with enhanced coverage in the Grants module.
