

Turning knowledge into impact

Elsa is an authoring platform and offers more than a manuscript submission system. It makes it easier for you to deliver what is needed by combining the best elements of a collaborative authoring tool with Elsevier specifications.

Focus on writing, not formatting

- ✓ Formats your chapter as you write, freeing you up to focus on writing
- ✓ References are automatically formatted and can be uploaded via a reference manager
- ✓ Elsa auto-numbers the Table of Contents, references, callouts, figures, tables, boxes, equations
- ✓ Content in a Word document can be uploaded and then edited
- ✓ The Print Preview feature shows you what the chapter may look like in print

Increase Discoverability

- ✓ Tagging keywords makes a chapter easier to discover on Elsevier platforms and search engines after publication
- ✓ Elsa suggests keywords to help authors pick the most relevant ones

Collaborate

- ✓ Track changes shows who changed what, where, and when
- ✓ Send comments and reply directly in the chapter to co-authors and Elsevier staff
- ✓ Helps with version control: Pass a manuscript to another colleague without worrying about keeping track of versions, edits in emails, or document sharing repositories

Stay Organized

- ✓ Elsa lets you know immediately you have a new assignment; see all your assignments and status in one place
- ✓ Privacy controls ensure no changes are made to the content while you are writing
- ✓ Dashboards show the progress of chapters and project in real time, helping you to manage deadlines
- ✓ The Publishing Assistant tool helps you to get everything right first time (e.g. it checks for missing references) ensuring the manuscript meets the submission requirements, saving you time
