

Build your societal impact reputation with Pure

Updated: June 14, 2021

Web version: <https://www.elsevier.com/research-intelligence/build-your-societal-impact-reputation>

What is your university's role in Societal Impact?

Increasingly, university leadership, governments, funders, the community, and others are demanding to understand the value of university research. They want to know that the significant investment in research is going to help society.

Munk et al. (2017) in the article, *Five Ways Universities are Organising Themselves to Increase Societal Impact*, recognize this importance:

“Aside from the major responsibility of education and knowledge, what purpose do universities serve? Many academic institutions around world are beginning to recognise their role in creating political, economic and social value, as well as their ability to become an ‘embedded brain’ within society. The vast resources, research capabilities and connections which universities hold can foster, promote, and lead social innovation globally.”

A university can contribute to societal impact in multiple ways. For example:

- Policies to ensure food on campus is sustainably farmed
- Access to mental health for students and faculty
- Upgrading existing buildings to a higher energy efficiency rating

Another central area where universities demonstrate societal impact is with the research they do. When a university participates in research that brings solutions to society, they act as part of the community to solve the world's problems.

Why is it important to showcase your SDG-related research?

Some important reasons to share the work you are doing in research that contributes to the SDGs:

- Students want to attend a university that demonstrates a commitment to sustainability
- Faculty want to work on solving big societal problems
- Reputation is often affected by the perception of the university and what it does to

Times Higher Education held the Innovation & Impact Summit in April 2021. At this event was a panel titled, “The power of profile: How universities are using evidence of their impact to build global reputation impact.” A participant said that talking about sustainable development gives you a whole new way of talking about what you do at universities and how you contribute to society in various ways.

How can the Pure Research Information Management System (RIMS) help?

Times Higher Education (THE), Vertigo Ventures, Elsevier and others collaborated on developing search queries to represent the research in the first 16 SDGs. Full details of the methodology for each SDG search query are available on [Mendeley](#).

-  Machine Learning Methodology & Samples [→ Cite](#)
-  SDG Queries [→ Cite](#)
-  SDG Query Methodology [→ Cite](#)

Using the same search strings, Pure identifies the research belonging to the correct sustainable development goal. You can also add these manually. Pure then highlights these in many ways, from the Portal to Reporting.

Pure Portal

The **Pure Portal** is the public-facing part of this Research Information System solution (RIMS). It enables you to exhibit your organization externally, promote your researchers and their accomplishments, and facilitate collaboration, and most importantly, contribute to your reputation.

Now, you can highlight the SDG research on your Pure Portal home page. Below are examples from the **University of Rosario**.

The Pure Portal showcases your SDG-related research for discovery

You can click on any of the SDG icons for a summary of the activity within that goal. To the right is the information for **SDG 16: Peace, justice and strong institutions**.

- 3 Profiles**
- 329 Research output**
- 1 Projects**

Researchers

Pure tags each researcher with the sustainability areas in which they are involved. As you can see from the above example, three researchers are highlighted under SDG 16. From the Portal home page, you can navigate to these researchers.

Filter the researchers by their associated SDGs to find potential partners and more.

You can get even more information by looking at the researcher's profile.

By looking at the researcher's profile, you have more information to help you understand this person. For example, Dr. Héctor Olásolo is in the

faculty of the law school.

In the Pure profile, you can find out more about this researcher including, CV, what departments they are associated with, and their recent collaboration network.

For even more detail about the author's publications, you can also view his profile in **Scopus**.

Scopus provides even more information about this author, including the topics he publishes in most frequently.

Scopus provides even more information about Dr. Héctor Olásolo. For example, he publishes on several topics, including International Criminal Court, Criminal Tribunals, Crimes Against Humanity.

Research Output

Another way to discover research about the Sustainable Development Goals is to look at all the output related to a goal or goals.

In the example below, you can see a list of the SDG 16 output.

Pure gives you a list of all research output per SDG, providing an excellent way to build your reputation.

From here, you can use even more filters to see exactly what you want. For example, below we've filtered the output to the most recent year.

Filters for Research output

Sustainable Development Goals

- SDG 3 - Good Health and Well-being (10)
- SDG 16 - Peace, Justice and Strong Institutions (9)
- SDG 15 - Life on Land (0)
- SDG 11 - Sustainable Cities and Communities (0)
- SDG 7 - Affordable and Clean Energy (0)

Reporting

While the **Pure Portal** is an excellent way to showcase your efforts on the UN Sustainable Development goals – and hence a lot of societal impact research – **Pure** provides reporting for internal users to understand their SDG-related research. This information can help inform communications, grant submissions, recruitment, and more.

In the example below, view a quick overview of the most and least active SDGs.

Sustainable Development Goals	Number of research outputs
Total count	123813
SDG 3 - Good Health and Well-being	11049
SDG 16 - Peace, Justice and Strong Institutions	1648
SDG 13 - Climate Action	920
SDG 7 - Affordable and Clean Energy	861
SDG 11 - Sustainable Cities and Communities	492
SDG 8 - Decent Work and Economic Growth	447
SDG 14 - Life Below Water	413
SDG 10 - Reduced Inequalities	356
SDG 15 - Life on Land	293

A quick look at the research output for each SDG for planning, communication, and more.

You can further see your top authors and departments as well. Allowing you to drill deeper and deeper for specific information to help inform strategy, reputation-building, collaboration opportunities and more.

Top Researchers within selected SDG (most Research Output)

Person	Number of research outputs
Total count	756
Nergaard, Mette	346
Steen Rasmussen, Bodil	160
Larsen, Christian Albrekt	137
Breidahl, Karen Nielsen	49
Kongshøj, Kristian	33
De Tavernier, Wouter	19
Lunn, Brian Kirkegaard	12
Vettdam, Thomas	10
Lunn, Tine Bieber Kirkegaard	0

Top Organisations within selected SDG (most Research Output)

Organizational unit	Number of research outputs
Total count	756
Department of Clinical Medicine	500
Department of Politics	233
Welfare studies	203
Department of Library and Information Science	11
Department of Computer Science	10

Explore the active researchers and departments in the SDGs.

Tagging the research in Pure, with its associated SDG gives visibility into the work you are doing around these goals. These associations, in turn, can help you build your reputation. Since your students, faculty, and community care about your societal impact, using the SDGs can be a good proxy for demonstrating it.
