

Biomedical literature & conference abstract data from **Embase**[®]

Biomedical literature indexed with the “Emtree” vocabulary used as a standard for Pharmacovigilance, Systematic Reviews, Competitive Intelligence

Drug and medical device manufacturers use Embase to establish uniqueness, provide evidence of safety and comply with pre- and post-market regulatory requirements. Embase is the world’s largest database of biomedical evidence from published, peer-reviewed literature, in-press publications and conference abstracts.

The data sets currently encompasses:

- 41+ million records
- 8.1+ thousand journals including 2.9 thousand not found in MEDLINE
- 3.6+ million conference abstracts from 11.5+ thousand conferences not found in MEDLINE

Example use cases

- Enrich content via semantic tagging for machine readability
- Organize and connect content to reveal concepts and relationships
- Enhance KOL databases for internal use
- Combine Embase data with other data sources for:
 - Competitive intelligence dashboards
 - Regulatory and medical affairs insights
 - Market access analysis and positioning

Available data sets

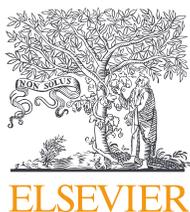

We offer a single option of the complete Embase file via API.

- XML via Embase API or Embase Flat File (API delivery is fastest and most preferred)
