

# Luc Reynaert

## Chief Product Supply Officer

Luc is the Chief Product Supply Officer for Procter & Gamble’s global Product Supply organization, which includes manufacturing, planning, purchasing, engineering, quality and program management. He serves nearly 65,000 colleagues in this division, 110 manufacturing plants, and 200 distribution centers around the world, all focused on bringing P&G’s irresistibly superior products to the world’s consumers.

A true Product Supply professional, Luc built his career with progressive engineering and supply chain leadership roles. He joined P&G in 1988 as a controls engineer, and he made it his mission to master all aspects of the supply chain. It is this hunger for continuous learning that has enabled him to provide breakthrough leadership with successful assignments on key P&G’s businesses - Fabric & Home Care, Baby Care, Feminine Care as well as Beauty. He has lived and worked in both Europe and North America, maintaining global responsibilities in each of these assignments.

Supply innovation is Luc’s passion. He is recognized internally and externally as a visionary leader in supply chain, leading the Global Supply Innovation Program for P&G Product Supply, and he has twice represented P&G on the U.S. Conference Board Council on Innovation, serving as P&G Representative and Council Chair. He is constantly looking for ways to create disruptive innovation by building alliances and partners to truly innovate across all aspects of the supply chain.

He is also passionate about inspiring, leading and coaching his organization, including actively working on developing women and affinity groups in manufacturing.
