
PRODUCT FRAGRANCES & SCENTS

Product Fragrances & Scents

Fragrances are naturally all around us and create a range of sensations. The scent of a flower might put you at ease, or a whiff of your shampoo or deodorant could help you feel more confident. Whether you choose a product with a powerful scent or a light background note, fragrance is often part of making your product routine enjoyable. We have our own fragrance designers at P&G who can design a unique fragrance for a product or co-create a fragrance with a fragrance house partner. This means we are able to offer a range of products and fragrances that cater to different tastes, including perfume-free variants for those who prefer them.

Being safe

Safety is the first ingredient in all of our product fragrances. Our unique product perfumes are blended with the greatest care and utmost attention to safety. All of our fragrances comply with the safety standards of the International Fragrance Association and the IFRA Code of Practice, and comply with all applicable regulations where they are marketed. We also conduct an additional safety assessment of our fragrances and their ingredients using the same science-based process as regulatory agencies around the world.

Feeling safe

While all of our product fragrance ingredients are safe to use, we understand some people want to learn more. Therefore, we are providing the current palette of ingredients we do use, as well as a list of ingredients we do not use below. We are constantly adding and removing ingredients from our fragrances to give you the best possible product experience, so these lists will be updated regularly. The list below represents all the ingredients our perfumers currently select from to create our scents, in alphabetical order.
