

Transparency & Voice

Meeting the Needs of Diverse Stakeholders in
Clinical Placements

Aleka Calsoyas, PhD, MBA
Torace CEO & Co-Founder

Today's Plan

- **Study Overview: Celebration and Diversity**

We recognize the hard work of diverse stakeholder groups contributing to student teacher placements and clinical experiences within and across contexts.

- **Our Findings: Accountability**

Current practices, legacy systems, and organizational culture do not always live up to our commitments to diversity, equity, and access.

- **Recommendations: Advocacy and Support**

Give stakeholders channels for self-advocacy so that they can represent their needs directly rather than by proxy.

Study Overview: Celebration and Diversity

Context

- 2016 -2017
- District with almost 80 schools
- 23 IHEs (deep partnerships with 7)
- Over 350 student teachers placed annually in the district
- Multiple processes representing many common models

Original Objective

In order to support the creation of a more intentional talent pipeline, we sought to develop a better understanding of two primary questions:

- 1) what factors were being used to drive placements universally for all candidates and
- 2) what factors were considered important for individual fit

Research Activities

- Literature Review
- District Landscape Analysis
- Theory of Action
- Ongoing presentations and feedback loops
- Online Student Teacher Preference Survey
- Online Student Teacher Exit Survey
- Online survey of IHE Program Coordinators
- Focus groups and interviews

This Study Celebrates

- Support from:
 - Our district partner
 - A local foundation
 - My organization's staff
 - Other informal advisors
- Feedback, perspective and expertise from:
 - Student teachers
 - Cooperating teachers
 - Licensure preparation partners
 - District administrative staff

Diversity of Collaborating Institutions

- Districts and other LEAs
- Institutes of Higher Education
- Other Educational Prep Partners
- State Departments of Education

Diversity of Needs, Stakes, & Motivations

- Role
- Context
- Individuals

Initial Findings

Despite stated commitments making successful matches driven by “fit,” most placements were made based on minimal matching criteria like licensure area and grade bands, and the first available match was taken.

Revised Objective

In order to support the creation of a more intentional talent pipeline, we sought to develop a better understanding of three new questions:

- 1) Why, despite good intentions were matches being made mostly on a first-come-first-served basis using mostly minimal criteria?
- 2) What factors would stakeholders like to have informing matches?
- 3) What could be done to create a system that aligns to current research and better reflects diverse stakeholder needs?

Our Findings: Accountability

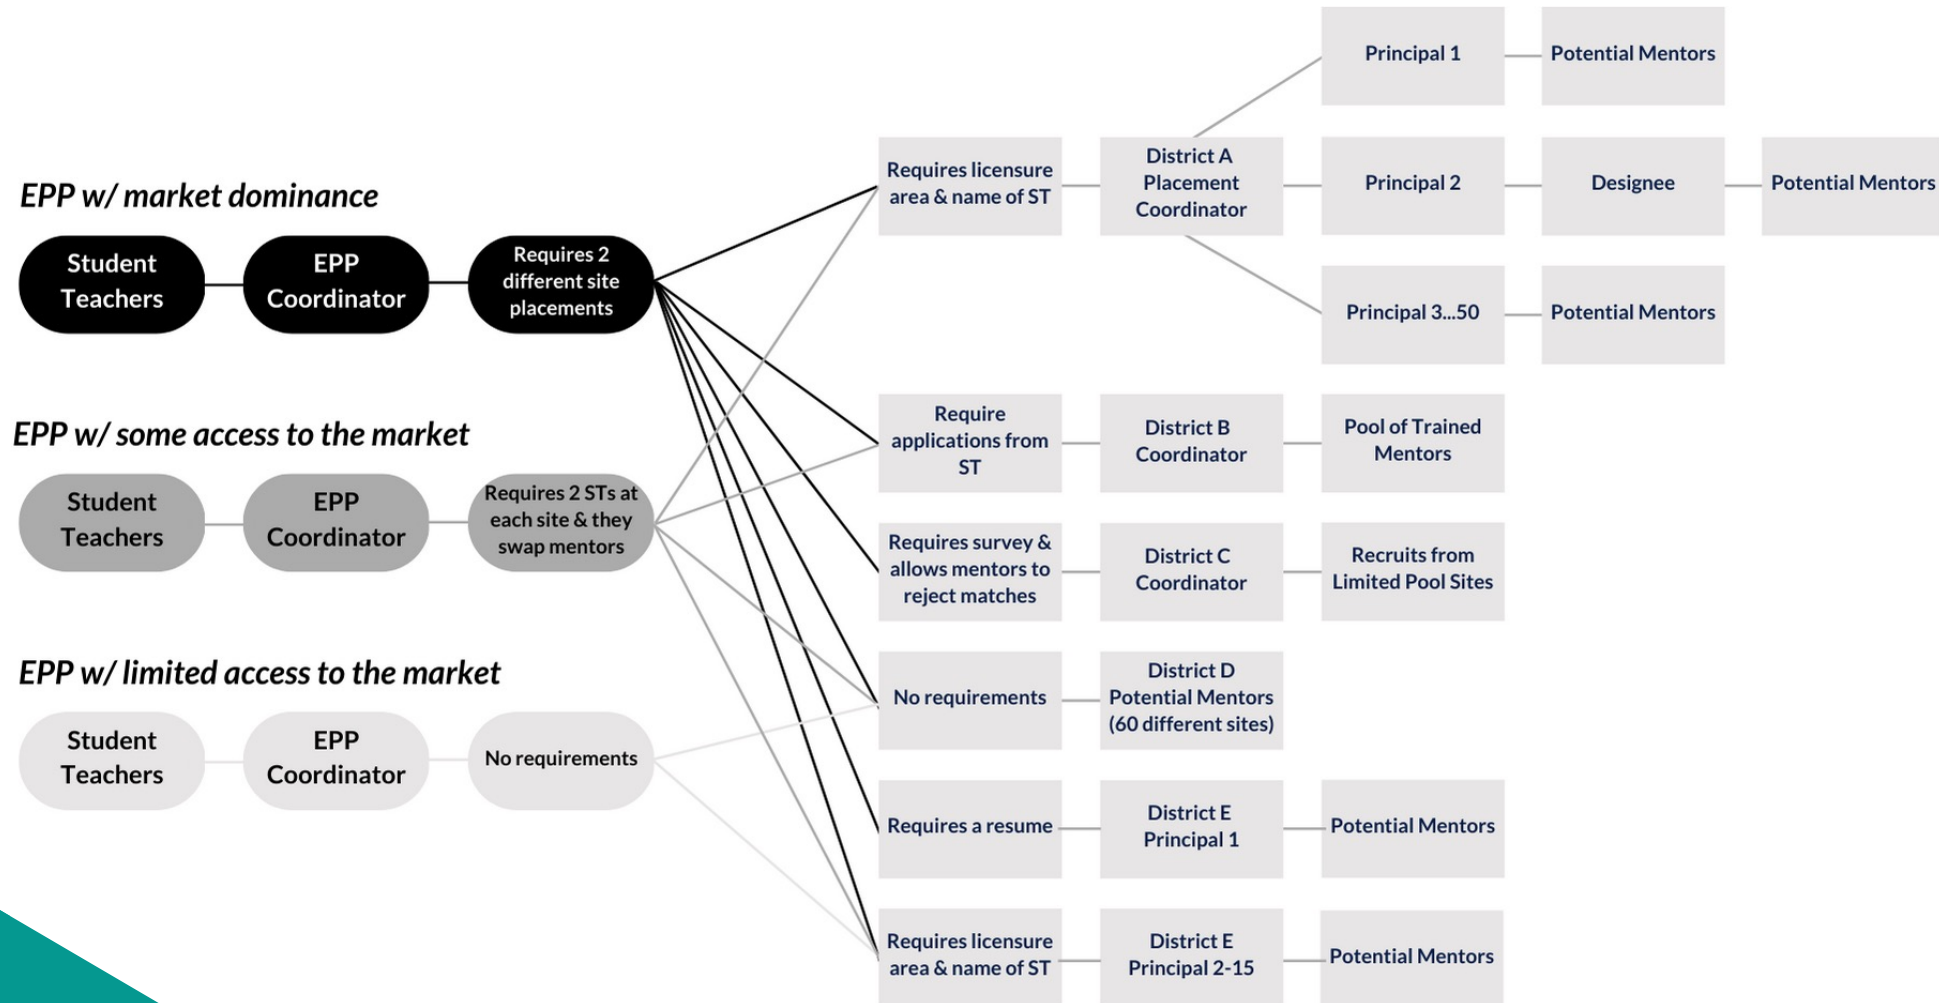

Quick Facts

- 30% of IHE coordinators reported not knowing most of the students they were placing well
- 50% of the district placement coordinators or liaisons reported not knowing their mentor teachers well
- 350 student teachers were placed in the district
- 160 student teachers wanted to be placed in the district but weren't because suitable placements couldn't be identified

Drivers of Minimal Match

- Logistical complexity reduces the richness of information available
 - Participants' interests were represented second or third-hand by coordinators who didn't know all candidates or mentors equally or even at all.
 - The voices, preferences, and needs of stakeholders were rarely heard or reflected directly in the process.
- Restricted and uneven flow of communications negates intentionality
 - Fragmented system with slow response times results in rarely having more than one option at a time
 - Short supply of cooperating teachers in a fragmented market and long response time creates uncertainty so most match makers take the first available match

Complex Logistics Restrict Information

Beyond This Study's Context

Regardless of who leads the placement process in a given context: the IHE, the LEA or a hybrid of overlapping processes, we have a shared responsibility to take a closer look at our practices:

- How deep are our **mentor pools** and how are those pools cultivated?
Are opportunities to mentor and to grow into mentoring make widely available? Is there a transparent screening process? What training and supports are offered?
- What **participant information** is consistently available for making matches?
Minimal requirements around licensure and grade band? What participants have to offer? What participants are seeking?
- Whose **voices** are represented in the process and via what channels?
Directly via interview, application, or survey? Indirectly by another party like a liaison or coordinator? Some groups but not others because of access and opportunity?
- Who intervenes in the **process** and at what points?
LEA administrators in certain roles? School leaders? IHE administrators in certain roles? Mentor Teachers? Student Teachers? Etc.

Making the Most of Student Teaching: Aligned Placements and Effective Mentors

Research One-Pager
January 2023

IN BRIEF

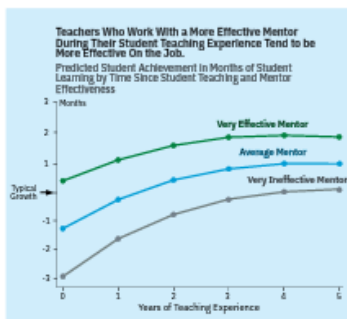

- Almost all traditional licensure pathways require student teaching to get a teacher license.
- Student teaching can offer important apprenticeship. But placements can be based on chance or tradition.
- Research evidence from CALDER suggests that aligned placements and effective mentors can benefit prospective teachers, schools, and students.

Teachers tend to stay in teaching when they student teach in a school like the one where they end up working.

Using novel data on student teaching placements and later outcomes in Washington State, we find that prospective teachers are more likely to stay in the workforce when their student teaching placements mirror the schools where they end up working (e.g., same grade span and similar student populations).

Teachers who have more effective mentors tend to be more effective once they start teaching.

We also find that first-year teachers in WA who had more effective mentors were as effective as a third-year teacher whose mentor was just average.

Teachers Who Work With a More Effective Mentor During Their Student Teaching Experience Tend to be More Effective On the Job.
Predicted Student Achievement in Months of Student Learning by Time Since Student Teaching and Mentor Effectiveness

Source: Goldhaber et al. (2020)

The Bottom Line

Because only 3% of classrooms host a student teacher in a given year, the scope for change on this issue is huge. To get the most out of student teaching, districts and prep programs should ensure that the most effective teachers act as mentors and consider placing student teachers in schools similar to those facing the most hiring needs.

Recommendations: Advocacy and Support

Broad Strokes Recommendations

To support clinical experiences that create more intentional and productive pipeline into teaching, placements should be made via a fair and transparent process which appropriately takes into consideration stakeholders' different voices and perspectives.

Our work and others' indicate this can have additional benefits:

- Year-one teachers who feel better prepared and more confident
- Better student outcomes in novice teachers' classrooms
- Higher retention rates for novice teachers
- Improved engagement of teacher leaders and future teacher leaders
- A more inclusive, respectful and accountable professional culture across institutions

But, advocacy alone is insufficient. Support and resources are also essential.
