

Mind to Mind: Two Complementary Tests of Nonlocal Correlation

Dean Radin, Erik Brinsmead, Helané Wahbeh, Sitara Taddeo

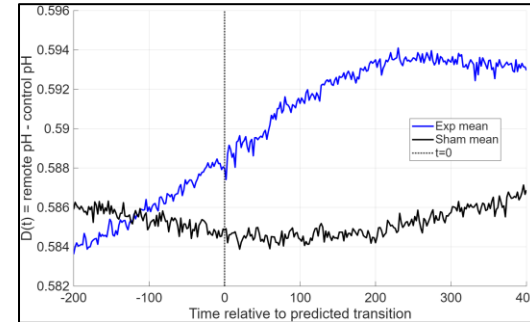

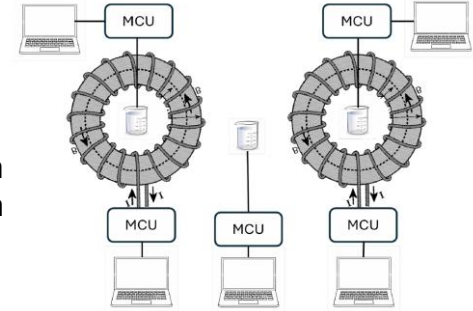

Biological: Emotionally Bonded Pairs

Using a remotely administered intention discrimination task, a significant above chance Receiver performance was observed relative to binomial expectation ($p = .0099$)

Physical: “Halo” Toroidal Magnetic Stimulation

Using pH in water as a proxy for the human brain, a significant “entanglement-like” outcome was observed in an experimental condition ($p < 0.005$) but not in a sham condition

Convergent evidence for anomalous correlations under controlled conditions

Made possible by Bial Foundation grant “Mind to Mind”
