Introduction & Motivation

In our increasingly data-driven world, it is imperative to provide opportunities for all students to learn foundational data science concepts and practices as part of their K-12 education. (Belitz et al., 2023)

Introduction & Motivation

“Data science bridges disciplines and thus should be introduced and taught across the curriculum in K-12 schools to help develop informed users of data... All subjects in school should recognize the contribution of data to their discipline and take curricular approaches that integrate data with disciplinary lessons where appropriate.”

(NCTM, NSTA, ASA, NCSS, and CSTA joint position, April 2024)

Introduction & Motivation

Harnessing data that resonates with students' experiences and aspirations can deepen engagement and increase the likelihood of knowledge acquisition.

(Brooks et al., 2021; Lee et al., 2021)

Intro to Our Research Project

Goal of research:

- Understand the state of Data Science in K-12
- Explore how to teach Data Science to High School students in ways that draw on their interests & identities

High Level Research Project Breakdown

Step 1: Study current high school Data Science

Step 2: Design, teach, and study an interest-driven high school data science curriculum

Studying the Landscape of Data Science

Data Science Curricula

Introduction to Data Science

Interests

Data in K-12 Data Science

Analysis of **296 datasets** across **4 curricula** and examination of their **alignment with the students' interests** (Based on data from our PD)

Israel-Fishelson, R., Moon, P. F., Tabak, R. & Weintrop, D. (2024). **Understanding the data in K-12 data science**. *Harvard Data Science Review*, 6(2).

K-12 Data Science Tools

Reviews **30 data science tools** used, or designed to be used, in K-12 data science education. Several attributes are used including **accessibility**.

- RQ1: What capabilities does the tool possess regarding data science practices, data visualisation, statistical calculations, and extensibility?
- RQ2: How do users interact with the tool, and how might the interaction support learning?
- RQ3: What accessibility features does the tool provide?
- RQ4: If the tool uses a block-based programming approach, what types of blocks does the tool include to support students learning data science?

Israel-Fishelson, R., Moon, P. F., Tabak, R., & Weintrop, D. (2023). **Preparing students to meet their data: An evaluation of K-12 data science tools.** *Behaviour & Information Technology*, Taylor & Francis.

K-12 Data Science Tools

Comparison of Data Science Tools For K-12

- [Tools' Capabilities](#)
- [Supported Interactions and Educational Features](#)
- [Supported Accessibility Features](#)

Table 1: Tools' Capabilities

Tools	Data Manipulations	Statistical Capabilities	Data Visualization			Data Availability			Extensibility	
			Tabular Display	Type of Graph	Creation Method	Built-in Data	Import	API	Export	
Blockly	Aggregating	N/A	×	Line	Code	×	✓	×	✓	✓
BlocklySQL	Filtering, Sorting, Aggregating	N/A	✓	N/A	N/A	✓	×	×	✓	✓
BlockPy	Filtering, Sorting	N/A	×	Scatterplot, Bar Chart, Line Chart, Box Plot, Histogram	Blocks / Code	✓	✓	×	✓	×
Bridges CS	Filtering, Deleting, Sorting, Aggregating	Correlation, Linear Regression	×	Line Chart	Code	✓	✓	×	✓	×
CODAP	Filtering, Deleting, Sorting, Aggregating	Correlation, Linear Regression	✓	Scatterplot, Bar Chart, Histogram, Box Plot, Map	GUI	✓	✓	✓	✓	✓

Designing an **Interest Driven Curriculum**

Create a data science curriculum that

students find engaging and compelling

informed by their values and voices

Participatory Design

- A research methodology that involves the end-users in the design process to ensure the outcome reflects their voices, values, and needs.
- PD was found to be effective in improving learning materials and curriculum development, as well as identifying students' interests.

(Coenraad et al., 2022; DiSalvo & DiSalvo, 2014)

Settings & Participants

Urban, public charter high school

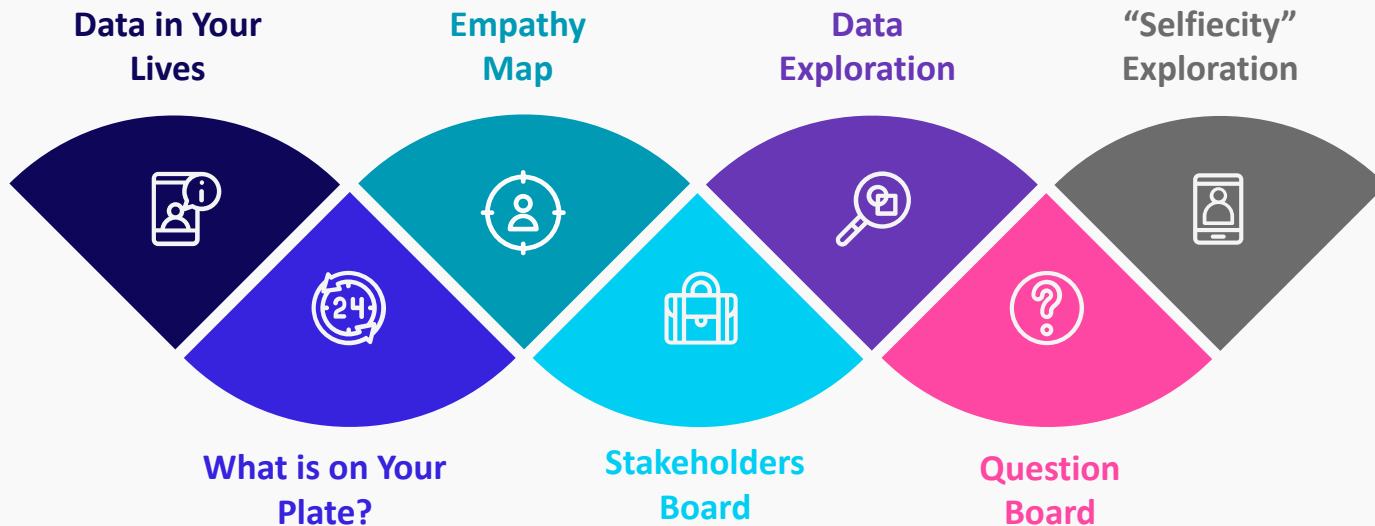

28 9-12 grade students

Gender	N
Male	17
Female	11
Race	
Black or African American	22
Native American	2
Hispanic	1
White	1

Participatory Design Activities

Discussions and 7 hands-on design activities:

Empathy Map

A User-Centered Design concept of a persona (Miaskiewicz & Kozar, 2011)

Code	Examples
Where	"Social Media (e.g., Instagram, Twitter)"; "Netflix"; "Hulu"; "Canvas"; "Google"; "Online shopping"; "iMessage"
Concerns	"Being tracked by the apps used"; "Being recorded without his consent"; "Someone wants to use your data against you"
Area of Interest	"Sports"; "Social Media"; "Video Games"; "Music"; "Movies and TV Shows"; "Animals"

Meet

API CAN CODE

The API Can Code Curriculum

An interest-driven curriculum that introduces high-school students to computational foundations of data science by having them explore meaningful and authentic data that align with their interests using APIs.

An API Can Code **Example**

“How much does a house in my neighborhood cost?”

Access the
Zillow dataset

Identify
questions about
this dataset

Filter data from
the API source

Create data
visualizations
and interpret

Access the Zillow Dataset

Choose the “/search properties by neighborhood, city, or ZIP code” endpoint and find your API-Key in the code snippets.

The screenshot displays the Rapid API interface for the Zillow dataset. The left sidebar shows the 'Endpoints' section with a search bar and a list of endpoints. The main panel shows the selected endpoint '/search' with its details and code snippets.

Endpoint: `GET /search` (Search for properties by neighborhood, city, or ZIP code)

API-Key: `05cbe836ebmsh8946000cd79a92dp1ef893jsnb6ce32b16ac8`

Code Snippets:

```
import requests

url = "https://zillow56.p.rapidapi.com/search"

querystring = {"location": "houston, tx", "output": "json", "status": "for Sale", "sortSelection": "priorityscore", "listing_type": "by_agent", "do z": "any"}

headers = {
    "x-rapidapi-key": "05cbe836ebmsh8946000cd79a92dp1ef893jsnb6ce32b16ac8",
    "x-rapidapi-host": "zillow56.p.rapidapi.com"
}

response = requests.get(url, headers=headers, params=querystring)
```

Retrieve & Filter the Data

- Open [this EduBlocks program](#) (Clone, rename, and save!)
- Insert your API-Key and change the location

```
# Start code here
import requests
import json

url = "https://zillow56.p.rapidapi.com/search"
headers = {"X-RapidAPI-Key": "YOUR KEY HERE", "X-RapidAPI-Host": "zillow56.p.rapidapi.com"}
querystring = {"location": "washington, dc", "output": "json", "status": "forSale", "sortSelection": "priorityscore"}
r = requests.get(url=url, headers=headers, params=querystring)
myJSON = json.loads(r.text)
myJSON = myJSON['results']

print("bathrooms, bedrooms, city, livingArea, price")

for i in myJSON:
    print(i['bathrooms'], ",", i['bedrooms'], ",", i['city'], ",", i['livingArea'], ",", i['price'])
```

Code Snippets Example Responses Results

Target: Python Client: Requests

```
import requests

url = "https://zillow56.p.rapidapi.com/search"

querystring = {"location": "houston, tx", "output": "json", "status": "forSale", "sortSelection": "priorityscore", "listing_type": "by_agent", "doz": "any"}

headers = {
    "x-rapidapi-key": "97c7425dbbmsh9e0971eee8248f3p1d4787jsned23d5e73e63",
    "x-rapidapi-host": "zillow56.p.rapidapi.com"
}
```

```
response = requests.get(url, headers=headers, params=querystring)
```

```
print(response.json())
```

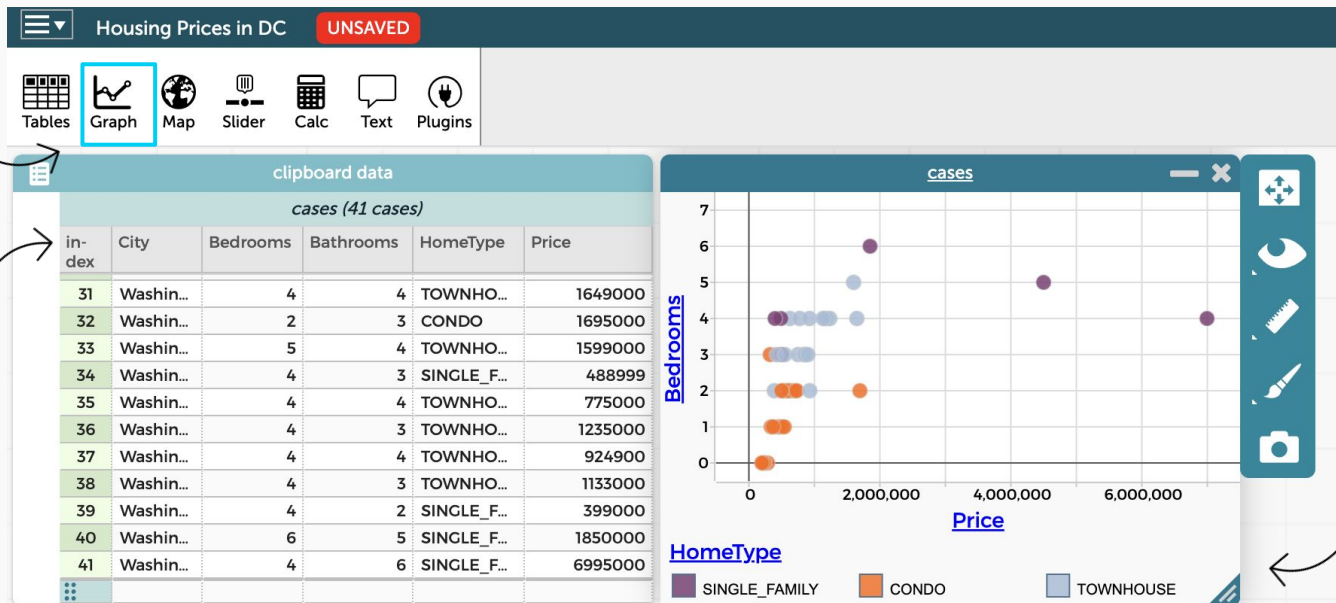

Create Data Visualization

- Create a new graph and drag the relevant headers to the x and y axis

Create a Graph

Headers

The Curricular Approach

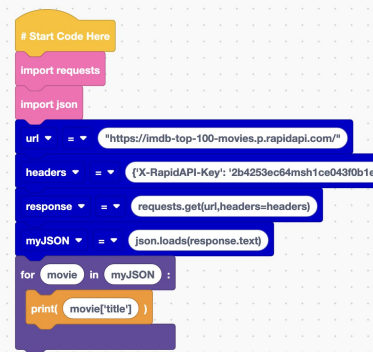

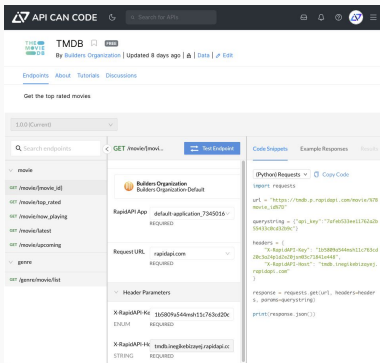

Unit 1:
Data in
Learners' Lives

Unit 2:
Computational
Foundations

Unit 3:
Data Science
Practices

Unit 1: Data in Learners' Lives

1. Introduction to Data
2. Data Collection and its Purpose
3. Using Data
4. Sources of Data
5. Evaluating Data Sources
6. Building a Survey for Data Collection

Unit 2: Computational Foundations of Data Science

1. What is Data Science?
2. Manual Data Processing
3. The Role of Programming in Data Science
4. Accessing Data with APIs
5. Preparing Data for Analysis
6. Manipulating Data

Unit 3: Data Science Practices

1. Introduction to Data Visualization
2. Exploratory Analysis with CODAP
3. Graphs and Figures: One Variable
4. Graphs and Figures: Two Variables
5. Statistical Testing
6. Linear Models

Integrating Students' Area of Interest

Topic	Lessons	Examples of Datasets
Social Media	1.2, 1.4, 2.4, 3.5	TikTok's Privacy Issues, Facebook Report
Music	1.5, 2.5	Billboard Hot 100 API
Sports	1.4, 2.6, 3.1, 3.5	NFL game scores, NBA API
Video Games	2.3, 2.5	Mario Kart Data
Movies & TV Shows	1.2, 1.6, 2.3, 2.4	IMDB Top 100 Movies API
Animals	1.5, 3.2, 3.3	Mammals Data, Four Seals Data
School / Education	1.4, 1.6, 2.2, 3.1, 3.3, 3.4	Schools' locations, Choosing a Collage
Going Out	3.2, 3.4	Roller Coasters Data
Environment & Health	1.1, 1.3, 3.1, 3.6	Plastic Bottle Waste, Earthquakes (USGS)
Food / Cooking	1.4, 1.5, 2.1, 3.2, 3.3	Starbucks Yearly Data, Food Deserts
Money / Jobs	1.1, 3.3, 3.5	Data Science Salaries,
Community	1.3, 1.4, 1.5, 1.6, 2.1, 3.5	DC COVID-19 Data, Zillow API

Final Project: Doing Data Science

1. Finding Data students care about
2. Generating Research Questions
3. Manipulating Data
4. Visualizing Data
5. Communicating the results

"Is Jhené Aiko a star?"

[illegible]

Final Project: Doing Data Science

“Which Ward has the most affordable houses?”

```
# Start code here
import requests
import json

url = "https://affordable-housing.p.rapidapi.com/AffordableHousingSelected"
headers = {
    "X-RapidAPI-Key": "642f70c7fcmsh3ba226a4cf1158dp1daa27jsn0f5688"
}
querystring = {"outFields": "MAR_WARD,STATUS_PUBLIC,TOTAL_AFFORDABLE_UNITS"}

r = requests.get(url=url, headers=headers, params=querystring)
myJSON = json.loads(r.text)
print("ward, number of units, status, x, y")
for i in myJSON['features']:
    if "MAR_WARD" in i['attributes']:
        print(i['attributes']['MAR_WARD'], ", ", i['attributes']['TOTAL_AFFORDABLE_UNITS'], ", ")
```
