

GETTING BACK IN TOUCH

Focus on your passengers

Ink Innovation
www.innovation.ink
info@innovation.ink

Ink works with airlines, airports and ground handlers to solve problems others cannot solve in the required time, with the required flexibility.

We do not ask people to change systems or lock them into ours. We plug into systems already in place to supercharge your processes.

We talk with you; not to you.

We listen and dream up the solution that you need together. Only then we implement solutions from our portfolio. We never lead with technology and products.

HQ in Alicante, Spain

Our main office is our own building in sunny Alicante. Arranged over 3 floors, it contains a large conference room, offices and a showroom that allows customers to preview our hardware.

Neutral

Ink works with multiple providers and systems without politics. Even though Ink has close strategic relationships with some companies, we never play one company off against another.

80 employees and growing

Ink has very low staff turnover. Our staff stay with us for many years, are deeply invested in our vision to reinvent travel, logistics and positively influence other industries.

Full Service

From system design through to delivery and support, Ink takes care of as much of a customer's operation as they want us to. Companies depend on us not to let them down.

We enjoy the challenge

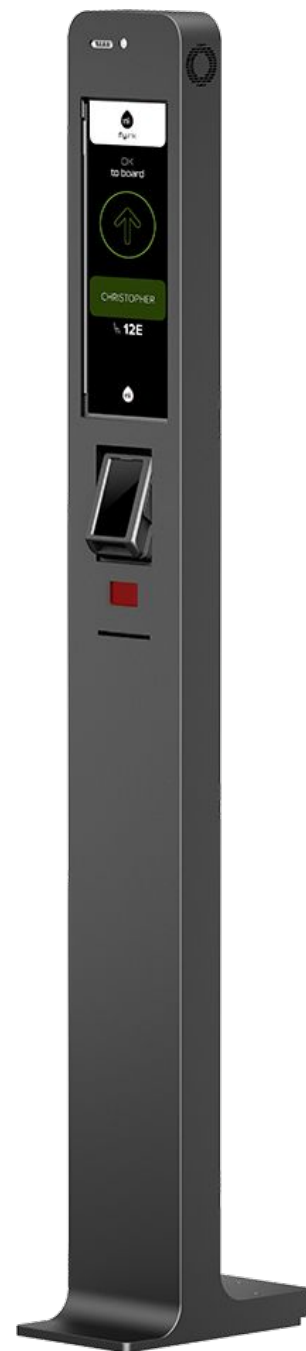

The beautifully designed Totem fits into any environment without taking up space.

There are two screens to allow expert functions to be carried out on the rear screen of the device.

Boarding with biometrics or a mobile phone scan couldn't be any easier.

Just look at the Ink Totem without stopping and it instantly gives a boarding result.

Totem

Boarding

Boarding with biometrics or a mobile phone scan couldn't be any easier. Just look at the Ink Totem without stopping and it instantly gives a boarding result.

Lounge Access or any Access Control

Use facial recognition or scans to grant access to any controlled area. Make it effortless for passengers to verify their Biometrics or InkID for any Use Case.

eCommerce or Retail

Upgrade, sell Ancillaries or anything. The EMV Chip & PIN card reader makes it easy to take payment for any additional services. Go further and deploy our unique **Finger Vein Biometrics** for secure payment.

**We would love to continue
the conversation that we
started.**
