

Superior Clamping and Gripping

Product Information

Gripper for small components EGK 25

Process-reliable. Flexible. Intelligent.

Flexible gripper for small components EGK

Versatile 2-finger gripper for small components for maximum workpiece variety with maximum process reliability

Field of application

Flexible handling of printed circuit boards in electronics manufacturing, sample and tray handling in laboratory automation, and universal workpiece handling. Particularly suitable for filigree and fracture-sensitive workpieces due to low impulse forces. Use in clean to lightly soiled work environments with contamination from dust or liquids.

Advantages - Your benefits

Versatile and productive due to the large and freely programmable jaw stroke with continuous gripping force adjustment for flexible workpiece handling

Reliable and sensitive Particularly suitable for the requirements of laboratory automation and electronics production due to the sealed design and smooth-running profiled rail guide

Maximum process reliability by avoiding workpiece loss due to integrated gripping force maintenance with loss detection

Always referenced both with an emergency stop and a power failure due to integrated absolute encoder

100% gripping force without start-up distance with constant gripping force over the entire finger length due to integrated spur gear

Minimal integration effort compatible with the leading manufacturers on the market due to a wide range of communication interfaces, as well as PLC function blocks and robot plug-ins

Functional description

The user has access to the highest level of functionality due to the components embedded in the gripper. This allows the gripper fingers to be pre-positioned at high speed or for dipping into a workpiece holder. The gripping force can be continuously adjusted to the workpiece handling requirement. Workpiece recognition enables full process transparency for the user. In an emergency stop situation, workpiece loss can be avoided due to the integrated gripping force maintenance.

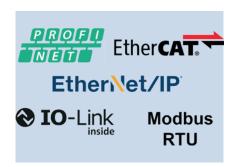

The BasicGrip and SoftGrip gripping modes are available. With BasicGrip and SoftGrip, continuous operation of the motor and thus permanent re-gripping of the workpiece is possible. The gripping speed is automatically optimized to the gripping force setting with BasicGrip. With SoftGrip, fracture-sensitive workpieces can be gripped particularly gently by reducing the impulse forces to a minimum when they hit the workpiece.

- ① Smooth profiled rail guidancee
 with stainless steel front seal and food-compliant lubrication
 and cover made from resistant polycarbonate.
- ② Fully integrated and sealed control and power electronics with status LEDs and M8 plug connectors for connecting the voltage supply and communication.
- High-resolution, output-side absolute encoder for precise positioning of the gripper jaws with permanent absolute position feedback.
- Sealed drive train with spur gear and pinion/rack principle for a constantly acting gripping force over the entire finger length, without a minimum approach distance.
- ⑤ Brushless flat motor for limited space and high torques due to external rotor.
- Electromagnetic brake
 with additional mechanism for maintaining gripping force and
 position during standstill or power failure.

Detailed functional description

Connectivity

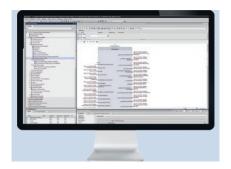

A wide range of available communication interfaces simplifies handling with a wide variety of control and robot manufacturers and ensures time savings during integration. Industrial Ethernet (PROFINET, EtherCAT, EtherNet/IP) enables direct integration without additional gateways into the control environment of leading PLC manufacturers on the market. With the Modbus RTU serial interface, the gripper can be connected to the tool flange of leading robot manufacturers without external cable routing. IO-Link is independent and offers flexibility in connecting to other networks.

Software Service - Robot integration

For seamless interaction between gripper and robot, software modules for integration into the robot control system of leading manufacturers are available. This means that the gripper's range of functions can be used directly without any additional programming effort and programming of the application can be started immediately.Robot compatibility (partially only available on request): Universal Robots e-Series via Modbus RTU, FANUC CRX via Modbus RTU, ABB OmniCore C30 via EtherNet/IP, YASKAWA YRC1000micro via EtherNet/IP.Software and other compatibility notes can be downloaded at schunk.com/egk-software.

Software Service - PLC integration

For seamless interaction between gripper and PLC control, function modules for the programming interface of leading manufacturers is available. This means that the gripper's range of functions can be used directly without any additional programming effort and programming of the application can be started immediately. PLC compatibility (partially only available on request): Siemens TIA Portal (PROFINET and IO-Link), Beckhoff TwinCAT (EtherCAT and IO-Link), Allen Bradley Studio 5000 Logix Designer (EtherNet/IP and IO-Link)Software and other compatibility notes can be downloaded at schunk.com/egk-software.

Software Service - Commissioning Software MTSN2

MTSN2 offers a wide range of functions and supports the user by easing the commissioning and parameterization effort. In addition, further functions such as address assignment, diagnostics, firmware update, parameter backup and bus monitor are available. MTSN2 enables user-friendly use of all gripper functions without the need for a PLC. In this way, initial application validations can be carried out in an uncomplicated manner. The gripper is directly connected to the computer via the network interface.MTSN2 is compatible with Windows and can be downloaded at schunk.com/egk-software.

L

General notes about the series

Housing material: Aluminum alloy, anodized

Base jaw material: hard-anodized, high strength aluminum

Warranty: 24 months or 5 million cycles (one cycle consists of a complete gripping process: "Open gripper" and "Close gripper")

Scope of delivery: Gripper including mounting instructions and accessory kit with centering sleeves for gripper mounting and finger mounting. Additional digital services are available at schunk.com/egk-software.

Gripping force: is the arithmetic sum of the individual force applied to each jaw at distance P (see illustration).

Repeat accuracy (gripping): defined as the spread of the actual position during 100 consecutive closing or opening movements on a rigid workpiece or a fixed workpiece stop under constant conditions.

Repeat accuracy (positioning, unidirectional): defined as the spread of the actual position per base jaw during 100 consecutive movements to a target position from the same direction under constant conditions.

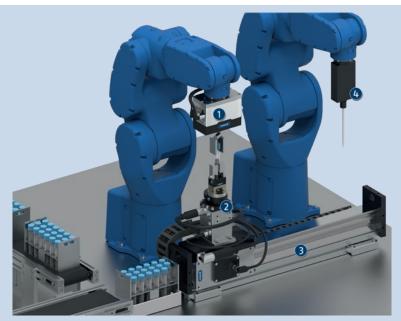

Repeat accuracy (positioning, bi-directional): defined as the distribution of the actual position per base jaw during 100 consecutive movements to a target position from both directions under constant conditions.

Finger length: is measured from the reference surface as the distance P in direction to the main axis.

Positioning accuracy: is defined as the deviation of the actual position per jaw during 100 consecutive, unidirectional positioning movements to a defined position under constant conditions.

Closing and opening times (positioning): Closing and opening times are only the movement times of the fingers at max. speed, as well as max. acceleration with observance of the max. permissible mass per finger and refer to the traverse path per jaw and 50% of the nominal stroke.

Max. speed (positioning) and max. acceleration: is the arithmetic sum of the velocity and acceleration acting on each jaw.

Application example

Flexible laboratory automation with automated sample evaluation. The servo-electric gripper handles trays and sample vials. Unscrewing takes place in an unscrewing station while the gripper holds the lid in place. After the lid is opened, the sample vials are fed to the pipetting unit and the sample is taken.

- Gripper for small components, electric
 EGK for tray and specimen handling
- Unscrewing station with gripper for small components MPG-plus and rotary drive ERD
- 3 Horizontal traversing axis LDN
- Pipetting unit

The following components make the product even more productive - the suitable addition for the

① For more information on these products can be found on the following product pages or at schunk.com.

Options and special information

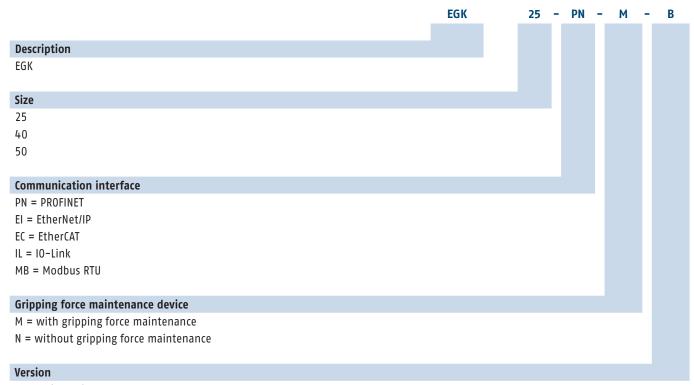

Gripping modes: The BasicGrip and SoftGrip gripping modes are available. With BasicGrip and SoftGrip, continuous operation of the motor and thus permanent re-gripping of the workpiece is possible. The gripping speed is automatically optimized to the gripping force setting with BasicGrip. With SoftGrip, fracture-sensitive workpieces can be gripped particularly gently by reducing the impulse forces to a minimum when they hit the workpiece.

Gripping force maintenance device: In the event of an emergency stop or a voltage drop, more than 75% of the originally applied gripping force can be reliably maintained due to a combination of an electric holding brake and the initial tension of the elastic element. If the gripping force and position maintenance is activated preventatively, 90% of the originally applied gripping force can be maintained. Overrun of the gripper fingers when removing the workpiece is a few millimeters and depends on the gripping force generated. Variants without gripping force maintenance are also available as an option. Seal: The gripper has increased protection against the ingress of dust or liquids by default. The IP protection of the electronics is only given if the plug connectors have been mounted properly. The gearbox of the gripper is additionally protected by a seal on the main shaft.

Interface of the base jaws: When using the intermediate jaw, the interface of the base jaws corresponds to that of the universal gripper PGN-plus-P. This means that the extensive range of finger accessories for the PGN-plus-P can also be used for this gripper, taking into account the interfering contours, and the application limits that apply.

With food-compliant lubrication as standard: as a solution for an easy entry into medical technology, lab automation, pharmaceutical and food industry. The requirements of EN 1672-2:2020 are not fully met.

Main view

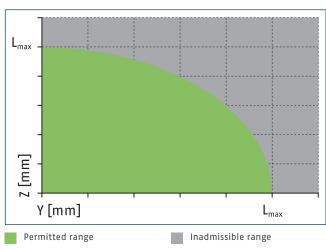

The drawing shows the gripper in PROFINET, EtherNet/IP or EtherCAT version, with and without gripper force maintenance with opened jaws.

- 1 Gripper connection
- 2 Finger connection
- 72 Fit for centering sleeves
- 80 Depth of the centering sleeve hole in the counter part
- 90 Voltage supply (M8, connector, 4 pin, A-coded)
- (91) Communication (M8, socket, 4 pin, D-coded)
- 93 Functional ground connection

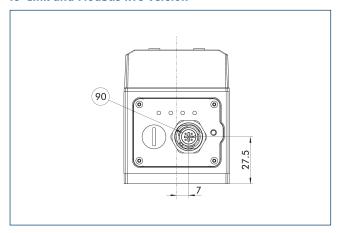

Maximum permitted finger projection

 L^{max} is equivalent to the maximum permitted finger length, see the technical data table.

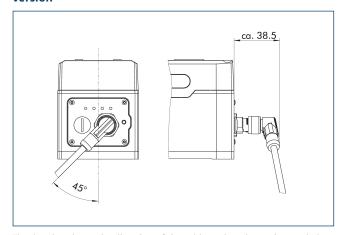

IO-Link and Modbus RTU version

O Voltage supply and communication (M12, connector, A-coded, IL: 5 pin, MB: 4 pin)

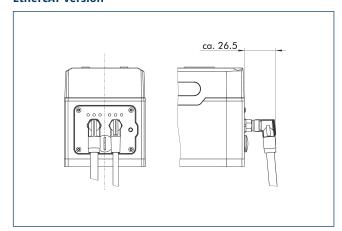

The drawing shows the changes in dimension of the IO-Link and Modbus RTU versions compared to the basic version found in the main view.

Angled plug connectors for IO-Link and Modbus RTU version

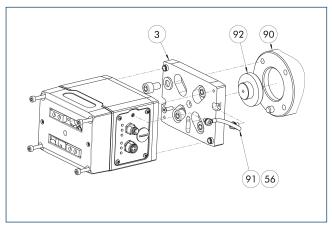

The drawing shows the direction of the cable outlet when using angled connectors. The distance from the plug connector to the gripper housing may vary depending on the cable manufacturer used.

Angled plug connectors for PROFINET, EtherNet/IP and EtherCAT version

The drawing shows the direction of the cable outlet when using angled connectors. The distance from the plug connector to the gripper housing may vary depending on the cable manufacturer used.

Robot adaptation packages single gripper

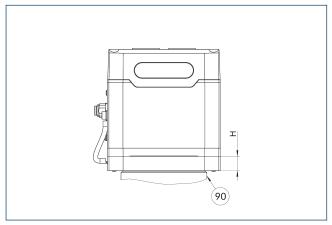

- 3 Adapter
- (56) Included in the scope of delivery
- 90 Robot flange
- (91) Cable functional ground
- 92 Centering disc

Robot adaptation packages for single grippers contain all components required to mechanically adapt the gripper to the desired robot flange. Depending on the flange pattern, suitable screws, centering pins and the centering collar are included.

Robot-specific connection cables

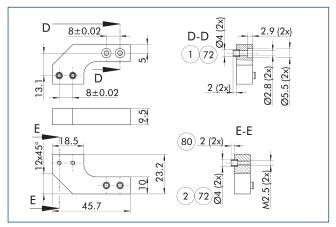

Connection cables and connection cable kits for electrical connection to specific robot models and controllers. Depending on the manufacturer, a direct connection to the tool flange is possible or external cabling is required. In combination with mechanical adapters and software modules, this allows commissioning on the robot to be carried out in just a few steps. Cables for external cable routing are designed to withstand torsion.

① For the connection cable, a cross-section for each individual wire strand of 0.25 mm² is recommended. Please refer to the product documentation for information about max. cable length and min. wire cross section.

Connection cable communication PROFINET, EtherNet/IP and EtherCAT

KA G... KA W... Straight plug connector

Angular plug connector

6 Connection module side14 Connector

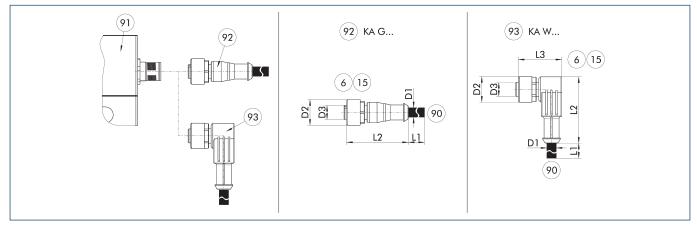

90 Cable ends with second plug connector

The communication cables are suitably assembled for the mechatronic products from SCHUNK and can be used for the PROFINET, EtherNET/IP and EtherCAT communication interfaces. They always have an M8 plug connector on the module side (D-coded, connector). The plug connectors are designed straight (KA G...) or angled (KA W...) on the module side. On the second side, the cables either have a straight M8 plug connector (D-coded, male) or a RJ45 plug connector.

① Please observe the min. bending radius for cable track-compatible cables or the max. torsion angle for torsion-compatible cables. These are generally 10 times the cable diameter or +/- 180°/m. Please refer to the product documentation for information about max. cable length and min. wire cross section.

Connection cable for voltage supply and communication IO-Link

KA G...

Connection cable with straight socket

KA W... Connection cable with angular socket

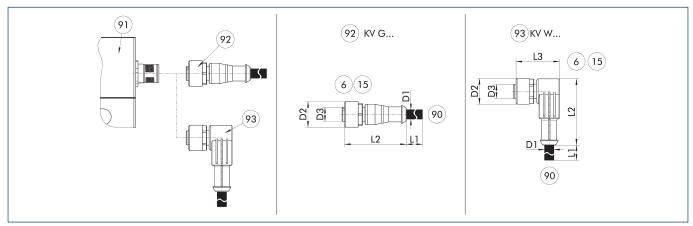

- 6 Connection module side
- (15) Socket
- 90 SAC connection cable with open wire strands
- (91) Connection plug component
- (92) Cable with straight female connector
- (93) Cable with angled female connector

The connection cable is ideal for connecting the corresponding components to the control system. The connection cable has a 5-pin M12 socket on one side, and open wire strands on the other side for individual connections. The connection cables are suitable for use both in the cable track as well as in torsion applications.

Description	ID	L1	D1	L2	D2	L3	D3

KA WLN1205-IOL-01000-A	1387211	10	4.8	39	15	28	M12

Please observe the min. bending radius for cable track-compatible cables or the max. torsion angle for torsion-compatible cables. These are generally 10 times the cable diameter or +/- 180°/m.

Cable extension for voltage supply and communication IO-Link

KV G...

Cable extension with straight socket

KV W...

Cable extension with angled socket

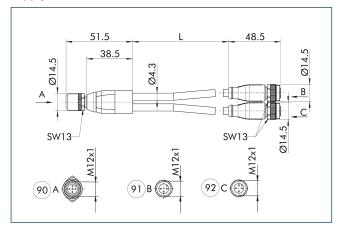

- 6 Connection module side
- 15 Socket
- © Cable end with straight connector
- (91) Connection plug component
- (92) Cable with straight female connector
- (93) Cable with angled female connector

The cable extensions are ideal for connecting the relevant components to the control system, or for use as extension cables. The cable extensions have a 5-pin M12 connector with a straight or angled design on the module side and a 5-pin M12 plug with a straight design on the other side. The cable extensions are suitable for use in the cable track and in torsion applications.

Y-distributor for IO-Link for splitting logic and power supply

90 Grippers

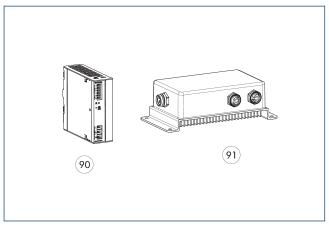

92) Power (24 V power supply unit)

(91) Logic (IO-Link master)

The Y-distributor enables power to be supplied from a separate voltage source and is recommended when the current consumption of the product exceeds the current output of the IO-Link master. The logic supply and the IO-Link communication continue to run via the IO-Link master. IO-Link masters with port class A or port class B can be used.

Description	ID	Length			
		[m]			
Y-distributor, M12 socket, straight - on 2xM12 plugs, straight A-coded					
Y-Verteiler M12 5pol. auf 1x M12 3pol.	1523560	0.3			

Switched-mode power supply

90 24 V power supply unit IP2

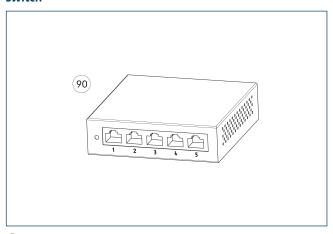

(91) 24 V power supply unit IP67

The power supply with an output voltage of 24 V and an input voltage range of 100 V - 240 V are matched to the power supply of our SCHUNK products. Whether for mounting in the control cabinet on DIN rail in protection class IP20 or directly in the field in protection class IP67: the power supply units deliver voltage where it is needed. We will be happy to assist you with further selection.

Description	ID			
24 V power supply unit IP2				
BLOCK PC-0124-050-0	31001408			
24 V power supply unit IP67				
TURCK PSU67-12-2480/M	1524336			

For the power supply IP67, there are customizable plug connectors for connection to the power supply unit included in the scope of delivery.

Switch

90 Ethernet 5-port switch

The switches enable easy expansion of a high-speed network using wired connections. With the switch, several SCHUNK products can be included in a network and thus controlled via a PLC, for example.

Description	ID
