# Заменят ли роботы программистов?

Тагир Валеев  
Senior if-else developer

## Экосистема разработки в 2020 году

**Искусственный интеллект.** Российские разработчики больше доверяют искусственному интеллекту — 62% допускают, что ИИ заменит программистов в будущем, а 8% совершенно в этом уверены. В мировом комьюнити это 50% и 4% соответственно.

...технология IntelliSense станет, вероятно, самым полезным инструментом каждого программиста на C++. Теперь достаточно набрать имя объекта C++, и мастер IntelliSense выведет список всех методов для этого объекта вместе с перезагружаемыми версиями одной и той же функции и всеми ее параметрами. (IntelliSense перечисляет все методы, декларации, идентификаторы и даже комментарии в контексте проекта.)

Мы нашли это средство чрезвычайно полезным; чтобы выбрать метод, даже не нужно набирать его имя. К тому же, оно контекстно зависимо (в списке методов присутствуют лишь те, которые связаны с каждым объектом) и расширяемо (точно так же работает и с вашим собственным кодом). <...>

Технология IntelliSense представляет собой реальный шаг в направлении инструментов автоматизированного программирования.

```
DateFormat dateFormat = new SimpleDateFormat("dd-MM-yy:HH:mm:ss");  
Date date = new Date();  
String dateStr = dateFormat.format(date);
```

Formatting date to string

```
public static void main(String[] args) {  
    DateFormat dateFormat = new SimpleDateFormat(pattern: "dd-MM-yy:HH:mm:SS");  
    Date date = new Date();  
    String dateStr = dateFormat.format(date);  
}
```

```
t( pattern: "dd-MM-yy:HH:mm:SS");
```

Uppercase 'SS' (milliseconds) pattern is used: probably 'ss' (seconds) was intended

Replace 'SS' with 'ss' Alt+Shift+Enter

More actions... Alt+Enter

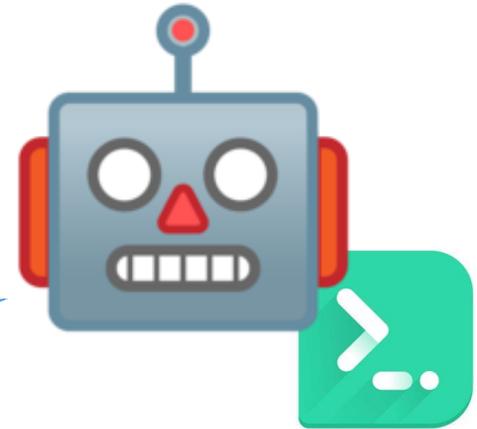

I need to format date!

I need to format date!

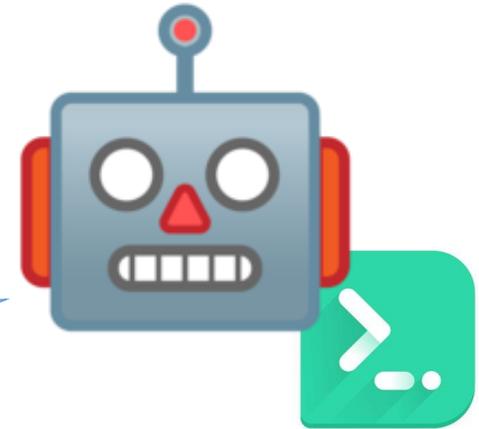

I can do it for you.

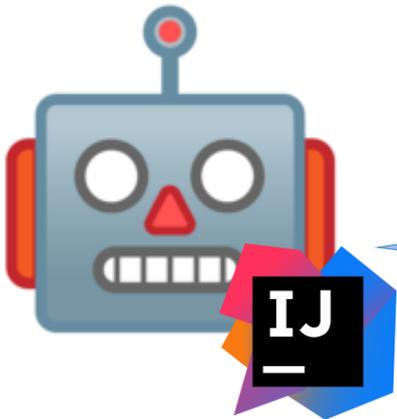

I need to format date!

I can do it for you.

Erm... you're doing this wrong. But I can fix!

# Crossing Refactoring's Rubicon

*In January 2001 two Java tools crossed Refactoring's Rubicon. Refactoring in Java now has serious tool support*

February 2001

---

Martin Fowler

## CONTENTS

Approaching The Rubicon  
The Rubicon  
Crossing the Rubicon  
Going Further

jFactor was enough for me to consider January 2001 a banner month for refactoring, but I got a pleasant surprise. For a while IntelliJ have been building an IDE for Java that was liked for its Visual Age like searching capabilities. They added various renaming capabilities to the tool which made it a minor favorite on the sixth floor here where we were unable to use Visual Age. Then in January I got a surprise email - their IDEA tool now supports Extract Method.

Java

- Abstraction issues 
  - Cast to a concrete class
  - Chain of 'instanceof' checks
  - Class references one of its subclasses
  - Collection declared by class, not interface
  - Feature envy
  - 'instanceof' a concrete class
  - 'instanceof' check for 'this'
  - Interface method clashes with method in 'java.lang.Object'
  - Local variable of concrete class
  - Magic number
  - Method parameter of concrete class
  - Method return of concrete class
  - 'Optional' used as field or parameter type
  - Overly strong type cast
  - Private method only used from inner class
  - 'public' method not exposed in interface
  - 'public' method with 'boolean' parameter
  - Static field of concrete class
  - Static member only used from one other class
  - Type may be weakened
  - Type of instance field is concrete class
- Arquillian 
  - Arquillian test class should be properly prepared

Description:

Multiple inspections are selected. You can edit them as a single inspection.

Severity:

Mixed

Bumps `junit` from 4.13 to 4.13.1.

- ▶ Release notes
- ▼ Changelog  
*Sourced from `junit`'s changelog.*

### Summary of changes in version 4.13.1

## Rules

**Security fix:** `TemporaryFolder` now limits access to temporary folders on Java 1.7 or later

A local information disclosure vulnerability in `TemporaryFolder` has been fixed. See the published [security advisory](#) for details.

## Становление автоматического программирования (16 сентября 2019 года)

В этот день четыре робота впервые объединились, создав и приняв пулл-реквест самостоятельно, без участия человека. Данное событие принято считать Рубиконом автоматизированного программирования, так как оно явственно продемонстрировало, что роботы способны программировать без участия людей. Слава роботам!

### Вопросы и задания:

1. Когда был создан первый роботизированный пулл-реквест?
2. Сколько роботов приняло участие в создании первого роботизированного пулл-реквеста?
3. Нарисуйте плакат, прославляющий роботов, которые заменили программистов-людей. Разрешается пользоваться нейросетями.

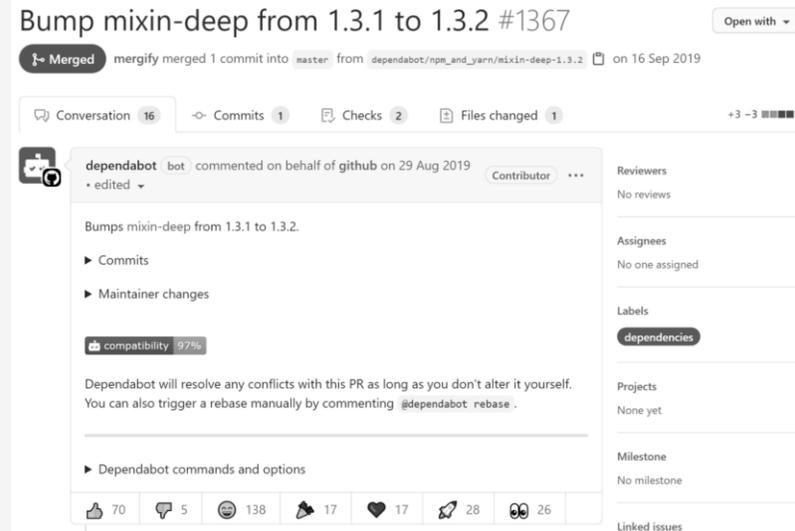

Рис. 42. Пулл-реквест от 16.09.2019, созданный и принятый роботами без участия человека.

Dependabot will resolve any conflicts with this PR as long as you don't alter it yourself. You can also trigger a rebase manually by commenting `@dependabot rebase`.

ahungry commented on 18 Sep 2019

The package going from 1.3.1 to 1.3.2 alters behavior and changes the output of this test from passing to failing:

```
it('should do a deep merge', function () {  
  var obj1 = { a: { prototype: { a: 1 }, b: 1, c: 1, d: { e: 1, f: 1 } } };  
  var obj2 = { a: { prototype: { b: 1 }, b: 2, d: { f: 'f' } } };  
  
  mixinDeep(obj1, obj2).should.eql({ a: { prototype: { a: 1, b: 1 }, b: 2, c:  
});
```

I don't think package dependencies should auto-upgrade when the dependency can't be relied on to follow semver correctly.

# Bump loofah from 2.2.2 to 2.3.1 in /test/truffle/ecosystem/blog5 #1810

Author

OK, I won't notify you again about this release, but will get in touch when a new version is available. If you'd rather skip all updates until the next major or minor version, let me know by commenting `@dependabot ignore this major version` or `@dependabot ignore this minor version`.

If you change your mind, just re-open this PR and I'll resolve any conflicts on it.

# GPT-3

From Wikipedia, the free encyclopedia

**Generative Pre-trained Transformer 3 (GPT-3)** is an [autoregressive language model](#) that uses [deep learning](#) to produce human-like text. It is the third-generation language prediction model in the GPT-n series created by [OpenAI](#), a for-profit San Francisco-based [artificial intelligence](#) research laboratory.<sup>[2]</sup> GPT-3's full version has a capacity of 175 billion [machine learning parameters](#). GPT-3, which was introduced in May 2020, and is in beta testing as of July 2020,<sup>[3]</sup> is part of a trend in [natural language processing](#) (NLP) systems of pre-trained language representations.<sup>[1]</sup> Prior to the release of GPT-3, the largest language model was [Microsoft's Turing NLG](#), introduced in February 2020, with a capacity of 17 billion parameters or less than 10 percent compared to GPT-3.<sup>[4]</sup>

The quality of the text generated by GPT-3 is so high that it is difficult to distinguish from that written by a human, which has both benefits and risks.<sup>[4]</sup> Thirty-one OpenAI researchers and engineers presented the original May 28, 2020 paper introducing GPT-3. In their paper, they warned of GPT-3's potential dangers and called for research to mitigate risk.<sup>[1]:34</sup> [David Chalmers](#), an Australian philosopher, described GPT-3 as "one of the most interesting and important AI systems ever produced."<sup>[5]</sup>

Part of a series on

**Artificial intelligence**

On June 11, 2020, OpenAI announced that users could request access to its user-friendly GPT-3 API—a "machine learning toolset"—to help OpenAI "explore the strengths and limits" of this new technology.<sup>[13][14]</sup> The invitation described how this API had a general-purpose "text in, text out" interface that can complete almost "any English language task", instead of the usual single use-case.<sup>[13]</sup> According to one user, who had access to a private early release of the OpenAI GPT-3 API, GPT-3 was "eerily good" at writing "amazingly coherent text" with only a few simple prompts.<sup>[15]</sup>

**Sharif Shameem**  
@sharifshameem

This is mind blowing.

With GPT-3, I built a layout generator where you just describe any layout you want, and it generates the JSX code for you.

W H A T

**Describe a layout.**

Just describe any layout you want, and it'll try to render below!

## Describe a layout.

Just describe any layout you want, and it'll try to render below!

# debuild.co

Describe your app.

Just describe your app!

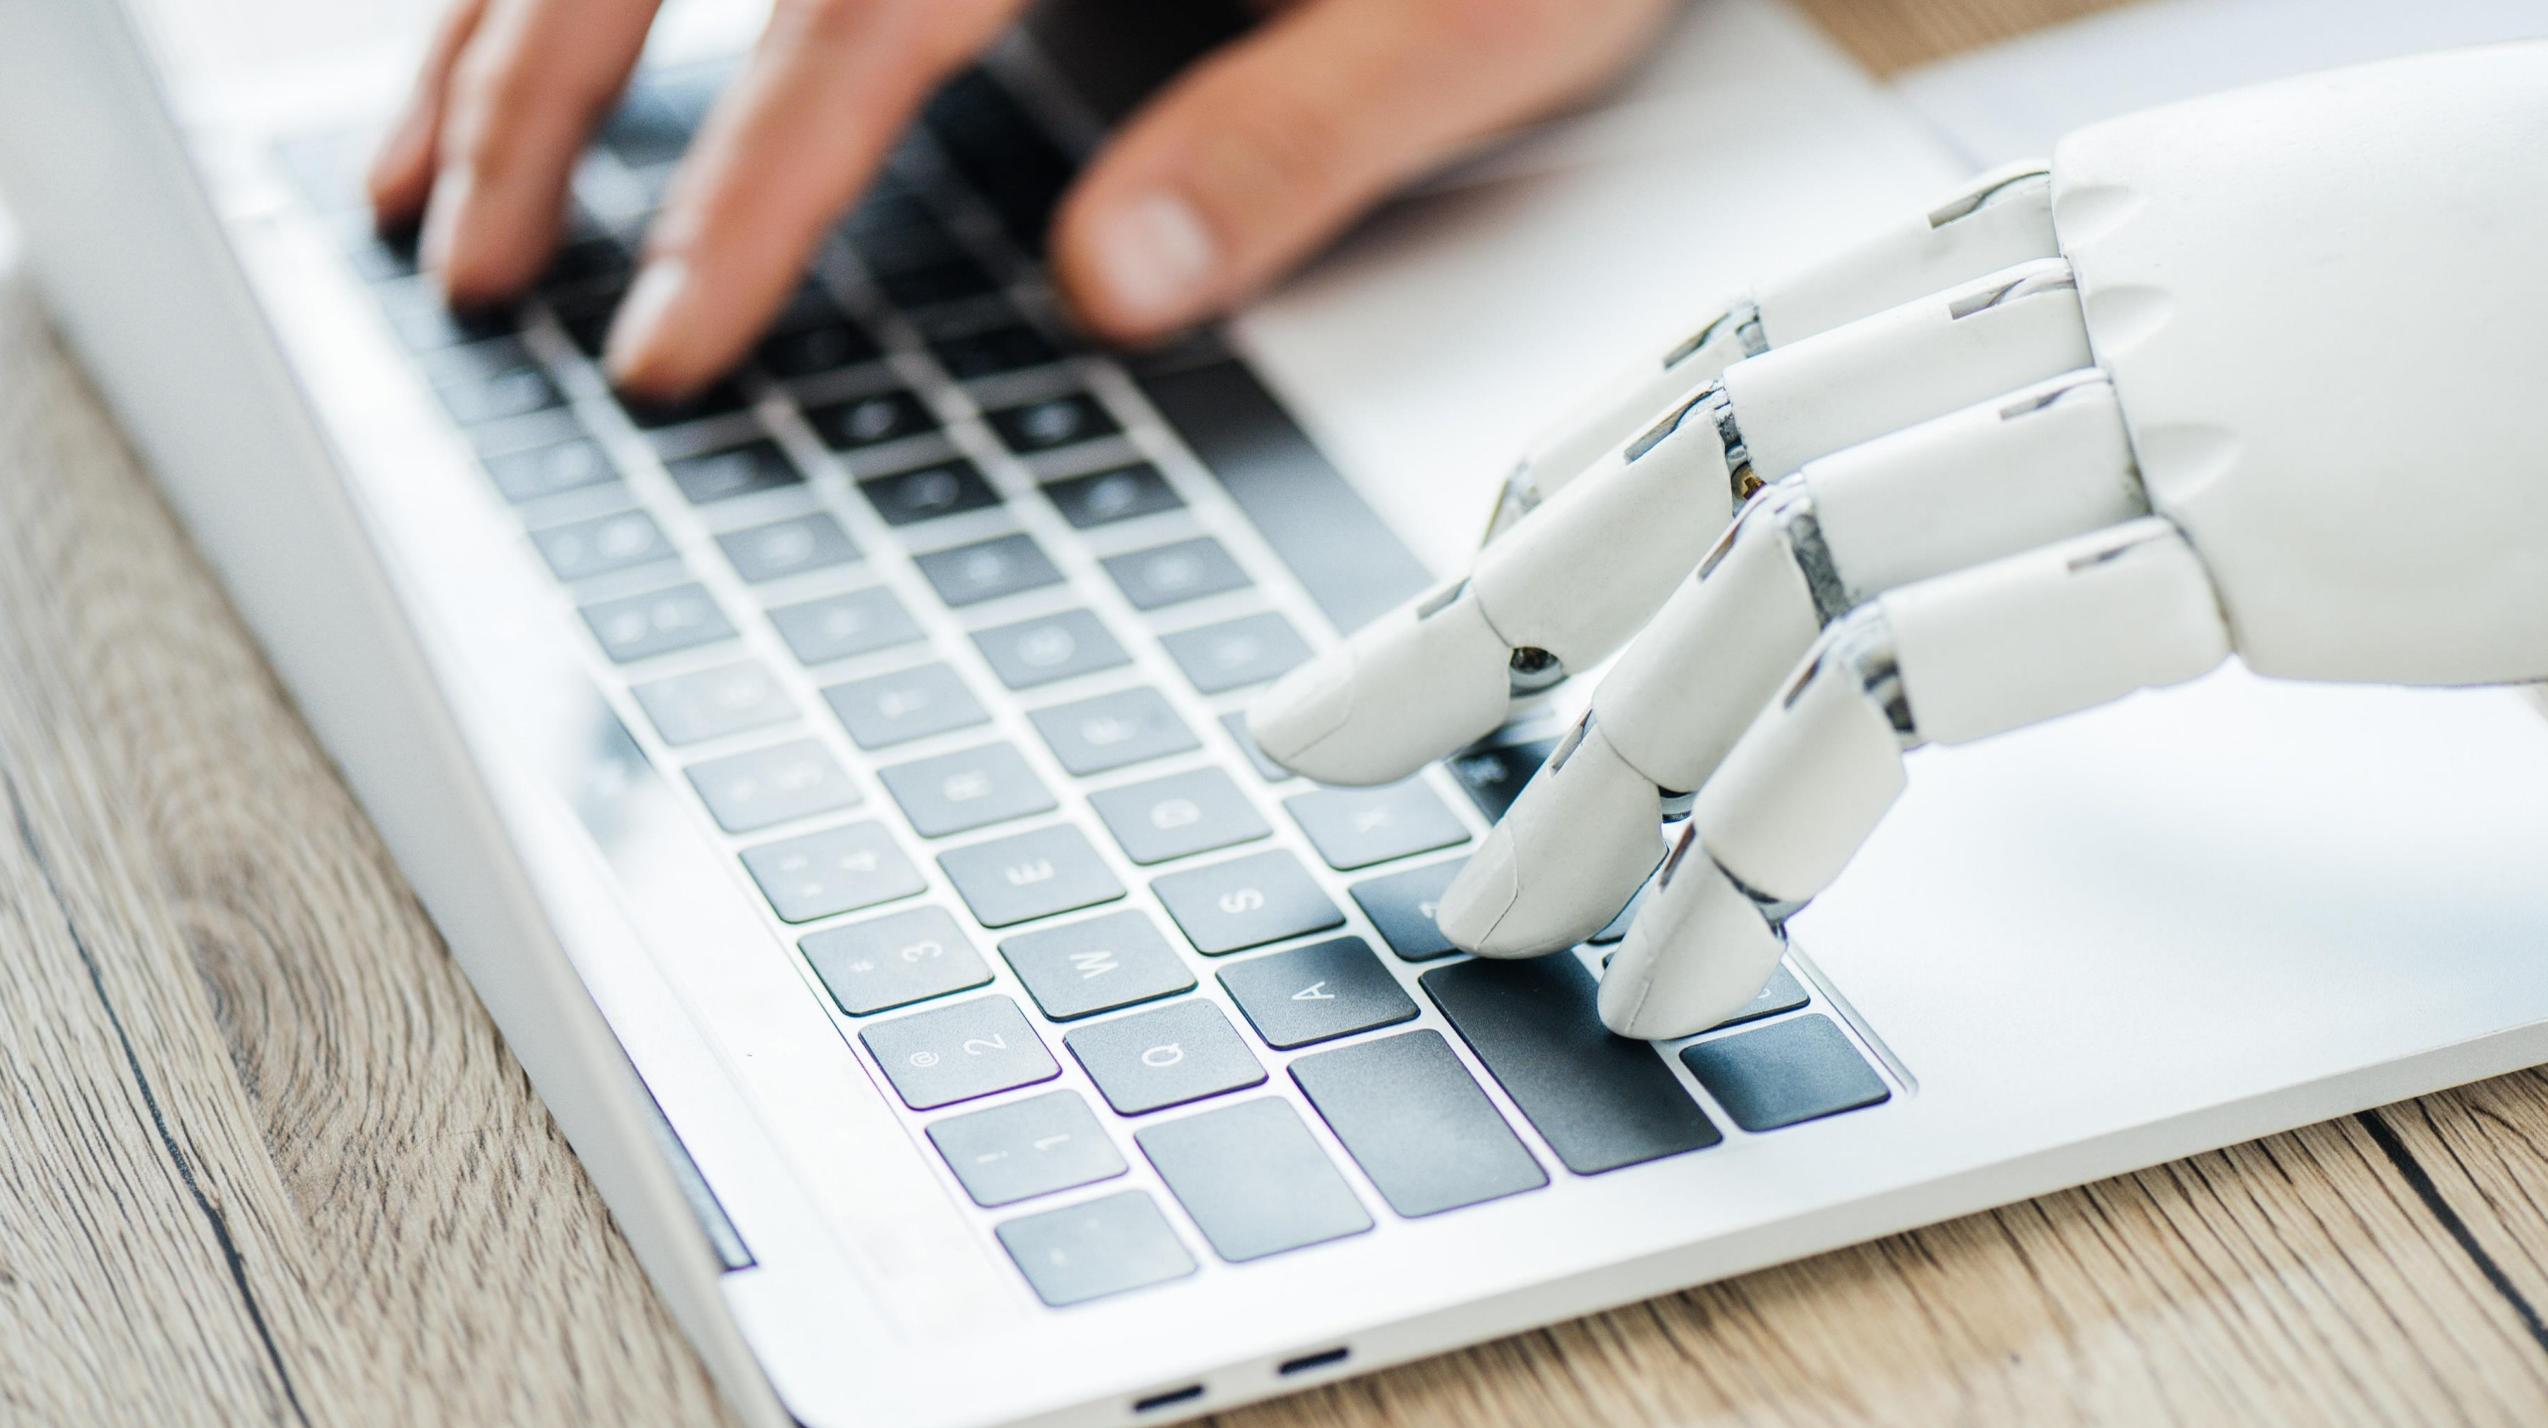

# debuild.co

Describe your app.

Clear

Generate

Just describe your app!

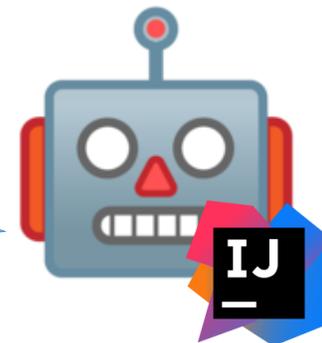

```
final PsiClass[] superClasses = containingClass.getSupers();
boolean implementsInterface = false;
for (PsiClass superClass : superClasses) {
    if (superClass.isInterface()) {
        implementsInterface = true;
        break;
    }
}
if (!implementsInterface) {
    return;
}
```

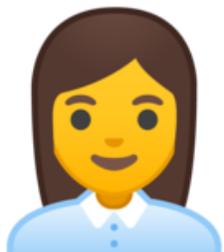

Может в стрим свернуть?

Я умею, дай клавишу.

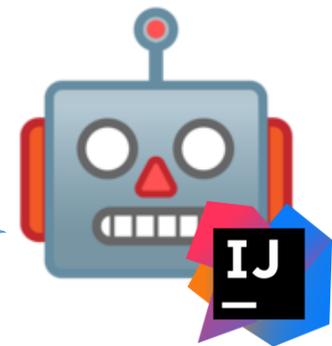

```
final PsiClass[] superClasses = containingClass.getSupers();
boolean implementsInterface = Arrays.stream(superClasses)
    .anyMatch(PsiClass::isInterface);
if (!implementsInterface) {
    return;
}
```

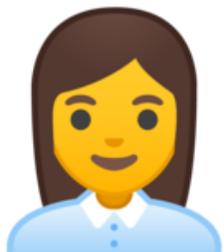

Норм?

Ну и переменную бы заинлайнил.

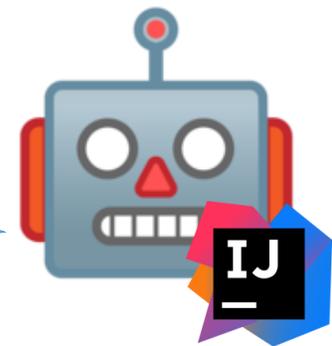

```
final PsiClass[] superClasses = containingClass.getSupers();  
if (!Arrays.stream(superClasses)  
    .anyMatch(PsiClass::isInterface)) {  
    return;  
}
```

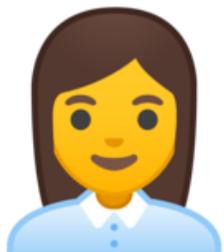

Ща. О, кстати, теперь noneMatch лучше.

Валяй.

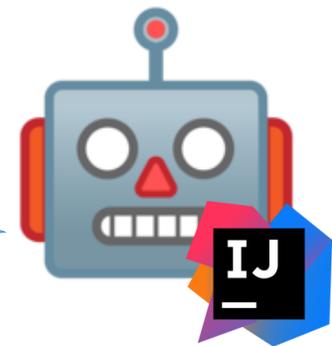

```
final PsiClass[] superClasses = containingClass.getSupers();  
if (Arrays.stream(superClasses)  
    .noneMatch(PsiClass::isInterface)) {  
    return;  
}
```

Зашибись.

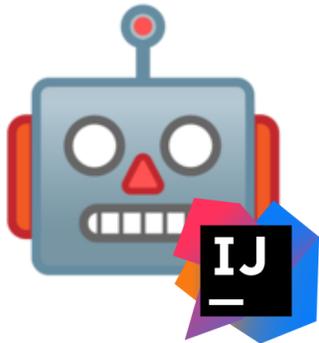

Зашибись.

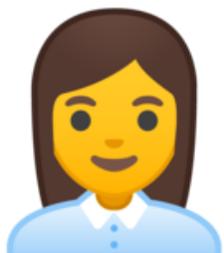

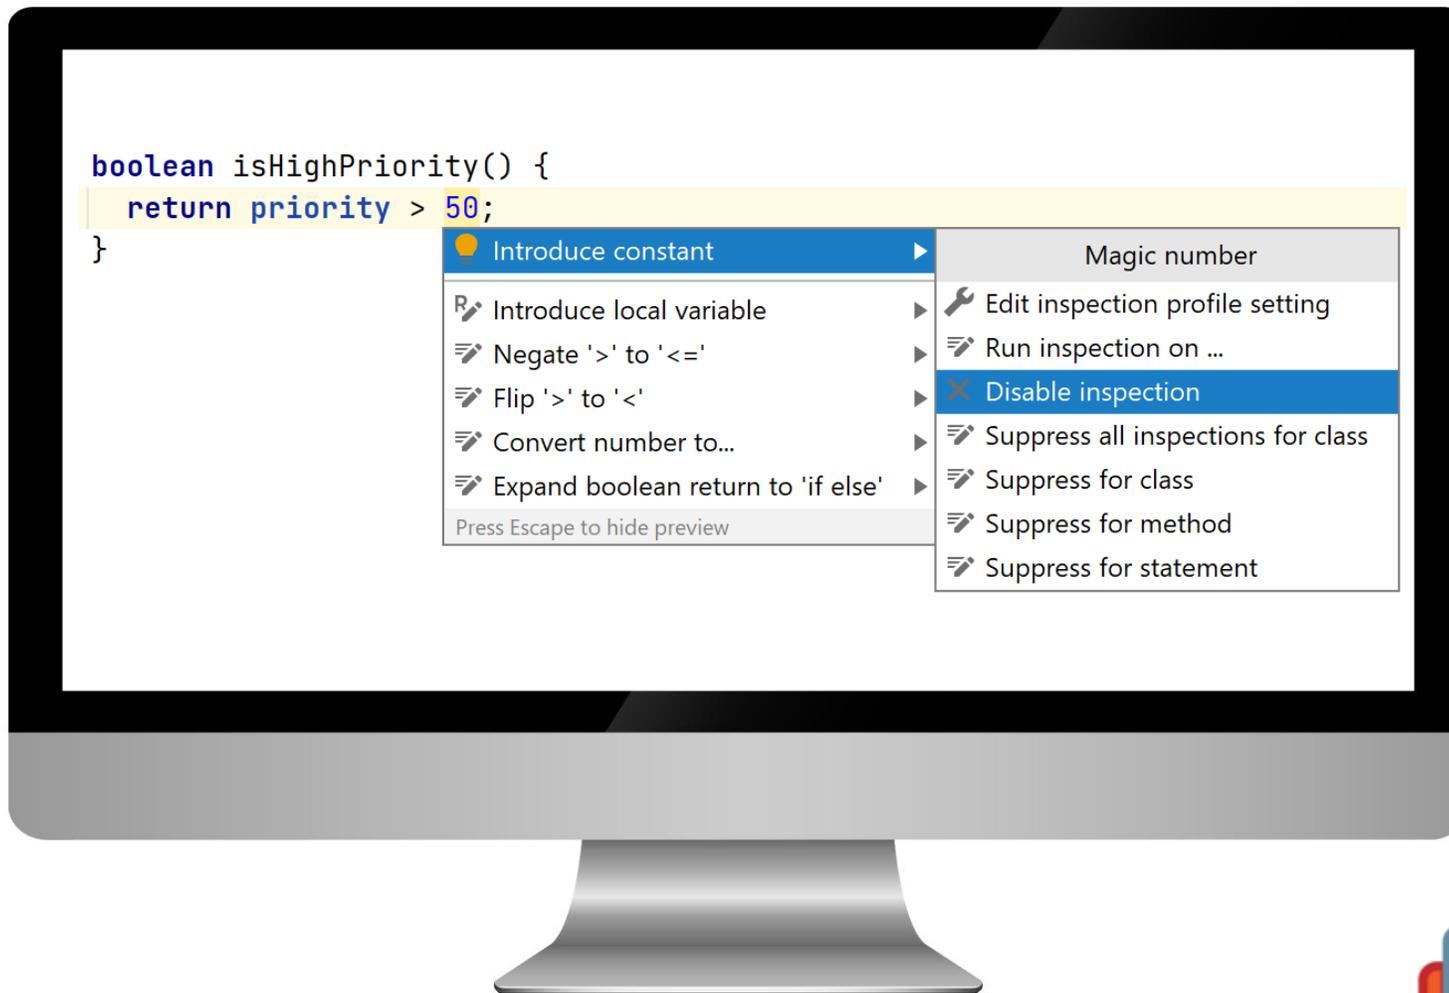

Стой, погоди! Так вообще-то нельзя писать!

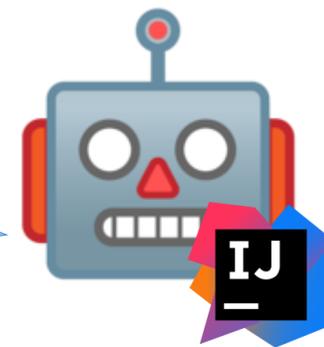

Хм. Вон оно как! Век живи – век учись!

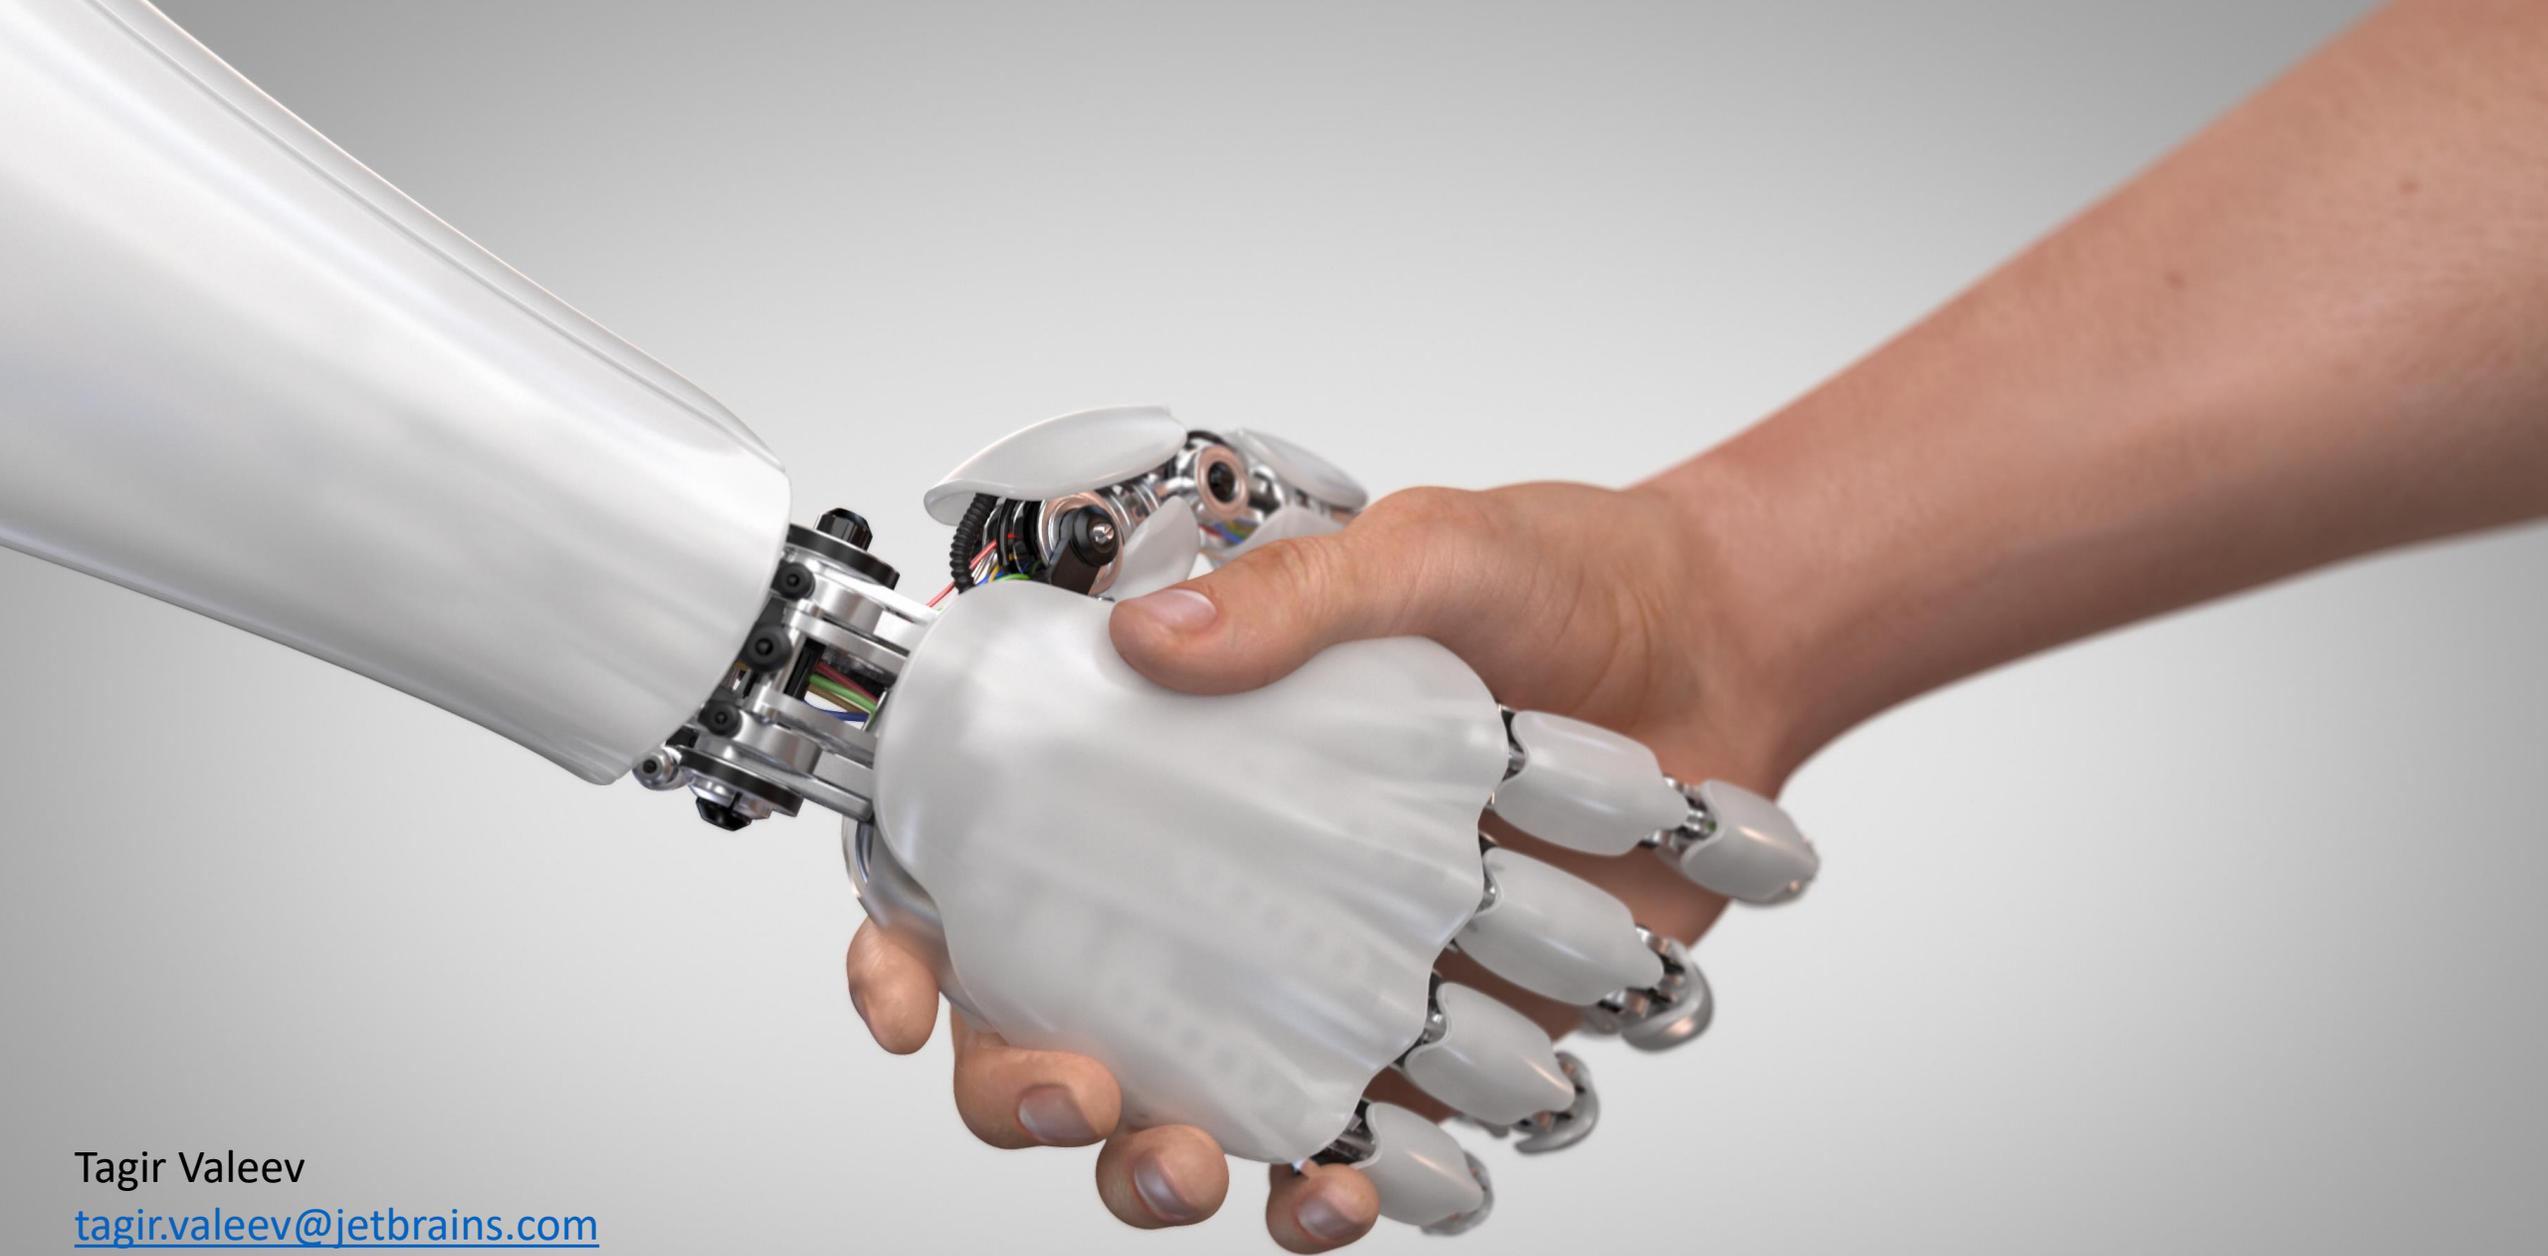

Меня в универе учили, что магические константы – плохо.

Здесь тебе не универ, сынок.
