

We are looking for an electronics developer

Here at adhoc, we want to play our part in making the world a better place. And we believe that to do this, we need solutions that are easy to use and reliable. As such, we support our customers with intelligent fill level monitoring with flexible, customizable hard- and software and a comprehensive service model.

Join our team and help us develop smart solutions, that simply make the world a better place.

Your tasks

- New development of circuit designs for modern low power IoT applications
- Responsibility for definition of layout and technology meeting both functional and commercial criteria
- Collaboration and coordination of our international, external partners (e.g. antenna manufacturers)
- Optimization and development of our current products and processes
- Building and testing of prototypes
- Creation of production documentation for pre-series and series
- Definition and documentation of our production processes

Your profile

- Studies in Electronics, Electrics or comparable
- Practical experience in PCB design for production using CAD systems
- Knowledge of EMC directive
- Experience in designing PCB layouts for communication technologies like Lora, LTE, NB-IoT is a plus
- Experience in soldering and assembling SMD components
- Knowledge in hardware related programming in C / C++

- Fluent in English, German language is a plus

What you get

- Active participation in shaping the working environment in a growing start-up in the IoT sector
- Pleasant and familiar atmosphere with flat hierarchies
- Free choice of work station or notebook
- Working partially in homeoffice possible
- 30 days vacation
- Access to learning platform „Udemy“ for individual further training included
- Free access to beverages and company sports
- Jobrad leasing of a company bike, also for private usage
- Free HVV card for public transportation in Hamburg area
- Weekly hours between 35 – 40h possible
